

FOR IMMEDIATE RELEASE

Mediacom Communications Launches Multi-Gig and Symmetrical Speed Services in Fairfax, Gibbon, Gaylord, Norwood Young America, Hamburg, Stewart, Lake Marion and Winthrop, Minnesota

Breakthrough enhancements to Mediacom's fiber-powered network create more responsive end-to-end experiences for consumers

WASECA, MN – JULY 17, 2025 -- [Mediacom Communications](#) today announced the company has launched multi-gig and symmetrical speed broadband services to nearly 5,500 households located in the rural Minnesota communities of Fairfax, Gibbon, Gaylord, Norwood Young America, Hamburg, Stewart, Lake Marion and Winthrop.

Utilizing [breakthrough technology](#) to enhance the company's fiber-powered network, Mediacom has created a more responsive end-to-end customer experience that prioritizes faster upload and download speeds, uncompromised network reliability, safe and secure connections, and lower latency.

With new upgrades to the platform, Fairfax, Gibbon, Gaylord, Norwood Young America, Hamburg, Stewart, Lake Marion and Winthrop residents will be able to choose from the following Xstream Internet offerings from Mediacom:

- **Internet 300** tier with speeds of 300 Mbps down and 100 Mbps up.
- **Internet 1 Gig Symmetrical** tier with speeds of 1000 Mbps down by 1000 Mbps up.
- **Internet 2 Gig Unlimited** tier with speeds of 2000 Mbps down by 1000 Mbps up.

The scalability of these network improvements will seamlessly allow Mediacom to ramp up from the one and two gigabit offerings of today to speeds of 10 gigabits and beyond in the coming years. Since this new technology is delivered using Mediacom's existing fiber-rich network architecture, it was not necessary to dig up yards to add bulky equipment or bury cables.

Mediacom is now able to enhance the performance of these speeds even further using Advanced WiFi, a whole-home WiFi solution featuring eero's TrueMesh designed to deliver an exceptional Internet connectivity experience throughout the entire house powered by eero 7 technology. With the recent launch of [Mediacom Mobile](#), customers can take their Mediacom service on the go while enjoying access to America's most awarded wireless network.

"It has long been our mission at Mediacom to bring cutting edge technologies to the small cities and towns we serve across America," said Zach Raskovich, Mediacom's Senior Director of Area Operations. "We look forward to launching multi-gig and symmetrical service options to even more rural Minnesota communities in the near future."

Mediacom will also continue to offer a low-cost broadband plan called [Xtream Connect](#) with speeds of 100 Mbps down by 20 Mbps up. Priced at just \$14.99 per month plus modem rental, if applicable, Xtream Connect provides qualifying households an affordable pathway to the internet and is available to any household in Mediacom's service territory that participates in the National School Lunch Program, SNAP, Medicaid, Federal Public Housing Assistance, SSI, WIC, or certain other federal programs.
