*PurAmino™ Jr should be measured with a **packed**, level scoop.

**When accuracy is essential, mL measurements should be used for water. Fluid ounce measures are provided for convenience when a larger variance in prepared concentration is acceptable. Fluid ounce measures in above table are rounded to the nearest 0.1 fl oz.

- ½ fl oz of water can be measured using one tablespoon (1 Tbsp water = ½ fl oz water)
- Powders mix best when added on top of water.
- The number of scoops and the amount of water to add can be doubled or tripled to make a larger volume.
- One fl oz = 29.57 mL.
