

Mitsubishi Electric makes Hillhead debut with focus on targeted energy reduction for aggregates industry

Hatfield, June 2024

Mitsubishi Electric's Automation Systems Division (Mitsubishi Electric) will be making its debut at Hillhead 2024, the UK's largest quarrying, construction and recycling show, highlighting how the aggregates industry can cut its energy use and improve plant efficiency.

The company will showcase its ICONICS Suite and intelligent control solutions from **stand PC43** at the show, which runs from June 25-27 at Hillhead Quarry, Buxton, Derbyshire.

The stand reflects Mitsubishi Electric's commitment to helping the sector find cost-effective ways to improve operational sustainability and efficiency through energy management strategies.

Attendees can find out more about how Mitsubishi Electric's ICONICS Suite software solution organises critical operating information to provide information-rich, dynamic dashboards to analyse and visualise aggregate plant processes and identify targeted opportunities for energy reduction.

These solutions will be key to helping the aggregates industry identify wasted energy use and improve environmental performance, as Trever Herbert, Business Development Manager at Mitsubishi Electric explains: "The aggregates industry uses many energy-hungry processes, so inefficiency can have a significant impact on overall profitability and sustainability. Deploying the right energy management solutions can help companies maximise uptime, achieve peak efficiency and improve competitiveness.

"I would encourage all visitors to Hillhead 2024 to visit the Mitsubishi Electric stand and find out more about how harnessing the power of data can reduce energy consumption. Sustainable operations needn't come at the cost of efficiency and we will be able to demonstrate this at the exhibition."
