- ☐ New Satellite JW Series ⇒ MELSEC-Q Series
- ☐ MEMOCON-SC GL Series ⇒ MELSEC-Q Series
- ☐ Non-Mitsubishi Programmable Controller ⇒ MELSEC-Q "Universal Conversion Adapter"

- The upgrade tool allows you to use your existing wiring (including terminal blocks/connectors) as is, achieving a significant reduction in transition work time as well as a significant decrease in wiring errors. (some connection changes required)

Existing programmable controller

New programmable controller

Upgrade tool

Reuse

Existing wiring

(including terminal blocks and connectors)

- The MELSEC-A/AnS series sequence program can be simply replaced using GX Developer and the A/QnA→Q conversion support tool, and the SYSMAC C series sequence program can be simply replaced using a program converter.

Upgrading from the MELSEC-A Series to the MELSEC-Q Series

■ Simplifies replacement with the MELSEC-Q series

The upgrade tool makes it easy to replace the Mitsubishi Electric programmable controller MELSEC-A series with the MELSEC-Q series.

■ Significantly shortens the time required for input, output, analog, and high-speed counter module wiring, and significantly reduces wiring errors

• The upgrade tool allows you to connect the wiring connected to the MELSEC-A series input, output, analog, and high-speed counter modules as is to the MELSEC-Q series using a conversion adapter. (Partial changes to power supply and common terminal connections required.)

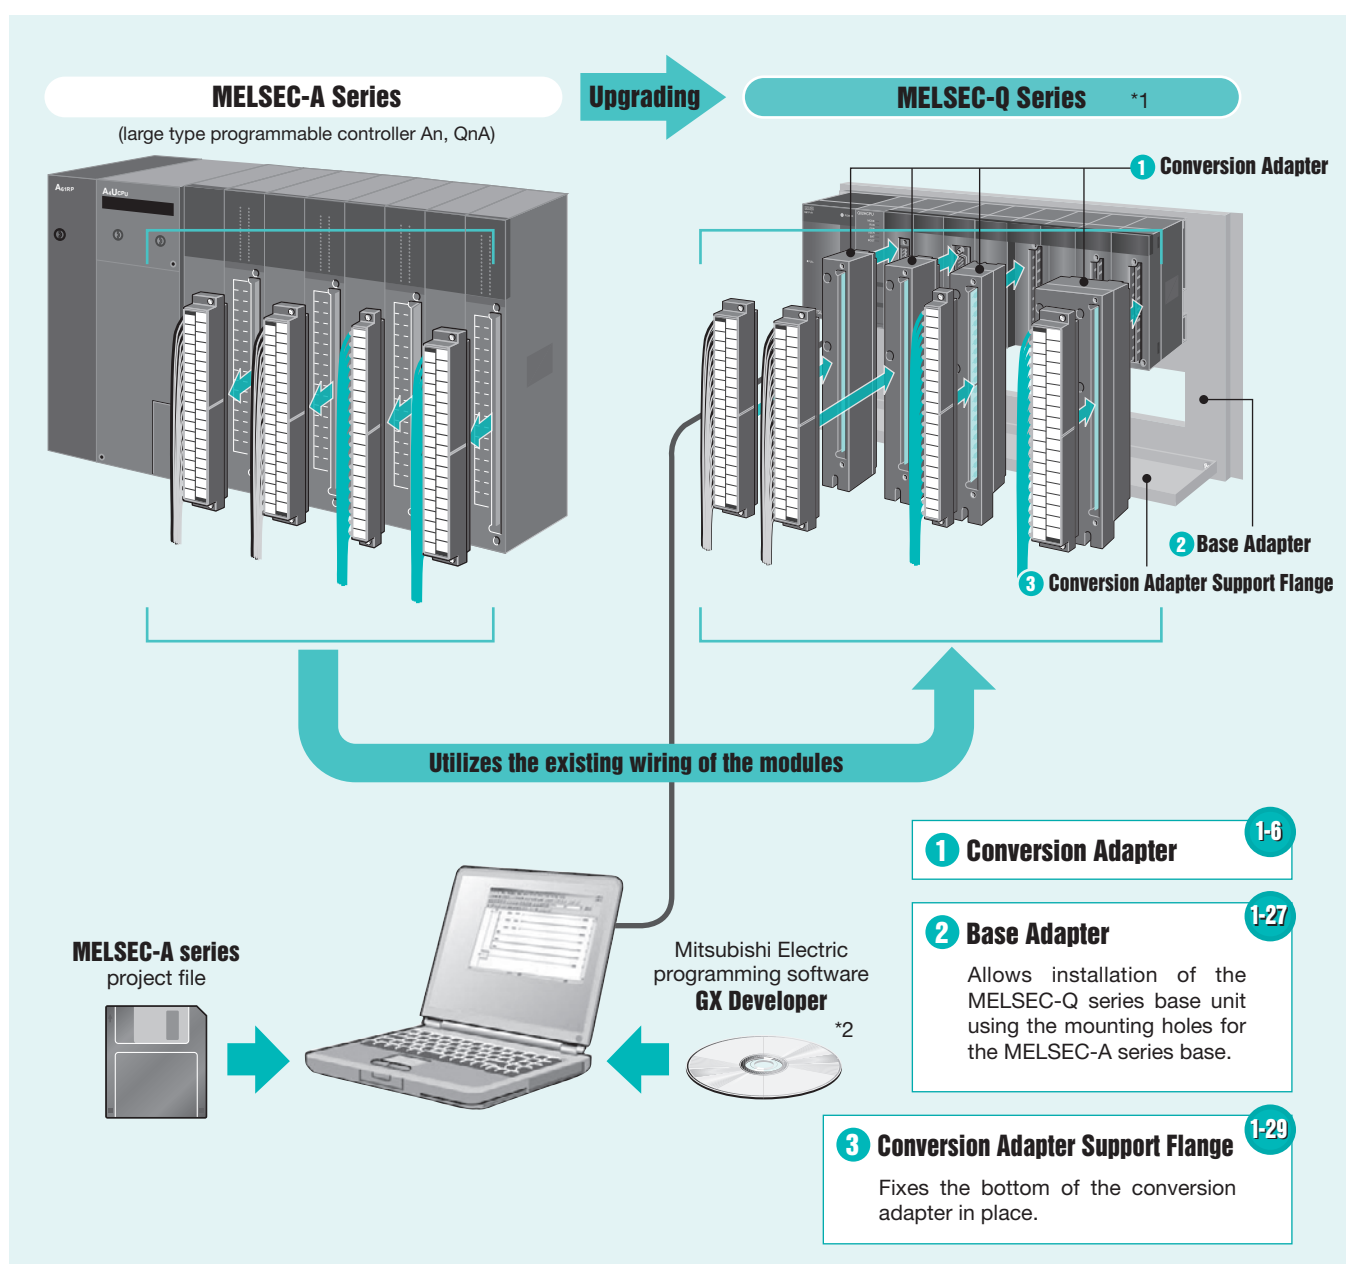

• By using a base adapter, the MELSEC-Q series can be installed using the MELSEC-A series mounting holes. (Additional drilling of holes is not required.)

■ Permits reuse of sequence programs

The upgrade tool allows you to change from the MELSEC-A series to the MELSEC-Q series and reuse programs by changing the PLC type in the Mitsubishi Electric programming software GX Developer.

Product Overview

This upgrade tool comprises a “conversion adapter” that changes the existing wiring connected to Mitsubishi Electric programmable controller MELSEC-A series modules to wiring applicable to the modules of the MELSEC-Q series, a “conversion adapter support flange” that fixes the bottom of the conversion adapter in place, and a “base adapter” that makes it possible to install the MELSEC-Q series using the mounting holes of the MELSEC-A series base unit.

*1: When replacing the MELSEC-A series with the MELSEC-Q series, verification of the mounting is required due to the change in module width and depth dimensions. For details, refer to the “Usage Precautions” (1-30) in this catalog.

*2: Programs can be reused when changing from the MELSEC-A series (existing program) to the MELSEC-Q series by changing the PLC type in the Mitsubishi Electric programming software GX Developer. For details, refer to the GX Developer Operating Manual. Tools that support program replacement with the Q series are also provided by Mitsubishi Electric.

If the wiring interferes with an adjacent module, wiring space can be secured by utilizing the Q series large type base unit.

MITSUBISHI ELECTRIC CORPORATION For MELSEC-A Series (large type) ⇨ MELSEC-Q Series

Upgrading using the Q series large type base unit

The slot width of the Q series large type base unit is the same as the slot width of the MELSEC-A series (large type) base unit, alleviating wiring interference with adjacent modules.

- The installation dimensions of the Q series large type base unit are the same as those of the MELSEC-A large type series. There is no need to drill holes for mounting.
- Can be used together with the Q series large type input/output module.
- The 2-slot type conversion adapter is not applicable.

Point

The Q series large type base unit allows both the Q series standard module that uses the upgrade tool conversion adapter and the Q series large type input/output module to be mounted together, enabling upgrades that utilize the advantages of both modules.

Model List

1 Conversion Adapter

When selecting a conversion adapter, be sure to refer to the module specification comparison charts and notes on pages 1-6 to 1-26. These pages indicate precautions such as differences in the number of points per common. For detailed specifications and general specifications not stated in the module specification comparison charts, refer to the user's manual of the corresponding module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

For Input/Output Modules

[1-slot type] (Applicable to Mitsubishi Electric Q series large type base units as well)

Input/ Output	MELSEC-A series module model before replacement	MELSEC-Q series module model after replacement	Conversion adapter				Page

Input	AX60 (-S1)	There is no applicable MELSEC-Q series module.						—
	AX81-S2							
	AX81B							
Combined input/output	A42XY							

^{*}5: The universal conversion adapter (see 7-5) can be used for replacement.

2. The input/output modules shown in the table below can use the existing wiring as is. Be sure to verify that the MELSEC-Q series module specifications satisfy the specifications of connected devices and equipment.

Input/Output	MELSEC-A series input/output module model	MELSEC-Q series input/output module model	Input/Output	MELSEC-A series input/output module model	MELSEC-Q series input/output module model
Input	AX42	QX42 (24VDC)	Output	AY42(-S1/S3/S4) ([*] 6)	QY42P
		QX72 (12VDC)		AY72	QY71 ([*] 7)
		QX41-S2 (24VDC) ([*] 7)		AY82EP	QY81P ([*] 7)
	AX42-S1	QX42-S1 (24VDC)	Combined input/output	AH42	QH42P (24VDC input)
	AX82	QX81-S2 (24VDC) ([*] 7)			QX41Y41P (24VDC input)

^{*}6: AY42-S4 requires a partial wiring change.

^{*}7: At the time of replacement, two modules are required.

For Analog Modules

[1-slot type] (Applicable to Mitsubishi Electric Q series large type base units as well)

Input/Output	MELSEC-A series module model before replacement	MELSEC-Q series module model after replacement	Conversion adapter			Page	
			Model	Shape			No. of channels
				MELSEC-A series	MELSEC-Q series		
Input	A68AD (Voltage input)	Q68ADV	ERNT-AQT68AD	Terminal block (38 points)		8 channels	1-15
	A68AD (Current input)	Q68ADI					
	A68AD-S2 (Voltage input)	Q68ADV					
	A68AD-S2 (Current input)	Q68ADI					
	A68ADN (Voltage input)	Q68ADV	ERNT-AQT68ADN	Terminal block (18 points)	8 channels	1-16	
	A68ADN (Current input)	Q68ADI					
Output	A62DA	Q62DAN	ERNT-AQT62DA	Terminal block (20 points)		2 channels	1-17
	A62DA-S1		ERNT-AQT68DA	Terminal block (38 points)		8 channels	1-18
	A68DAV	Q68DAVN					
	A68DAI	Q68DAIN					
	A68DAI-S1						

[2-slot type] (Not applicable to Mitsubishi Electric Q series large type base units)

Input/Output	MELSEC-A series module model before replacement	MELSEC-Q series module model after replacement	Conversion adapter			Page
			Model	Shape	No. of channels	
Input	A68AD (Voltage/Current mixed input)	Q64AD-GH × 2 modules ([*] 8)	ERNT-AQT68AD-GH	Terminal block (38 points)	8 channels	1-20 to 1-21
	A68AD-S2 (Voltage/Current mixed input)					
	A68ADN (Voltage/Current mixed input)					
	A616AD (Voltage input)	Q68ADV × 2 modules	ERNT-AQT616AD	Terminal block (38 points)	16 channels	1-22
	A616AD (Current input)	Q68ADI × 2 modules				
Output	A616DAV	Q68DAVN × 2 modules	ERNT-AQT616DA	Terminal block (18 points) × 2	16 channels	1-23
	A616DAI	Q68DAIN × 2 modules				

^{*}8: In a case where A68AD, A68AD-S2 or A68ADN are connected to both voltage input and current input, replace the module with two Q64AD-GH modules capable of switching the voltage input and current input of each channel.

For High-Speed Counter Modules

A52B	Q52B	ERNT-AQB52	Conversion adapter support flange ERNT-AQF3	

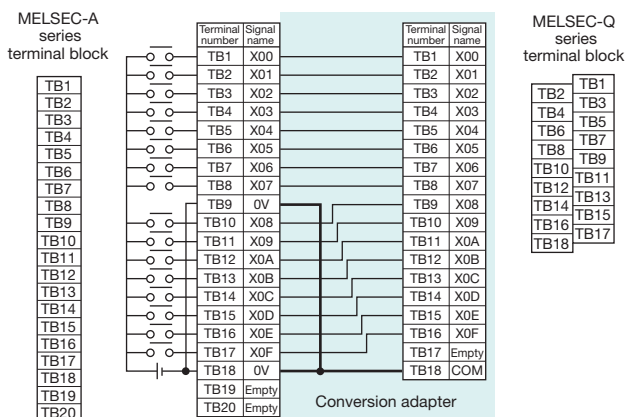

*9: The base unit after replacement requires a power supply module.

3 Conversion Adapter Support Flange

Conversion adapter support flange model	Description	Remarks	Page
ERNT-AQF12	12-slot conversion adapter support flange	A conversion adapter support flange is always required with conversion adapter use.	1-29
ERNT-AQF8	8-slot conversion adapter support flange		
ERNT-AQF5	5-slot conversion adapter support flange		
ERNT-AQF3	3-slot conversion adapter support flange		

3) ERNT-AQTX80 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of input points	MELSEC-Q series module model
ERNT-AQTX80	AX80 AX80-UL	16 points	QX80

[Input module specification comparison chart]

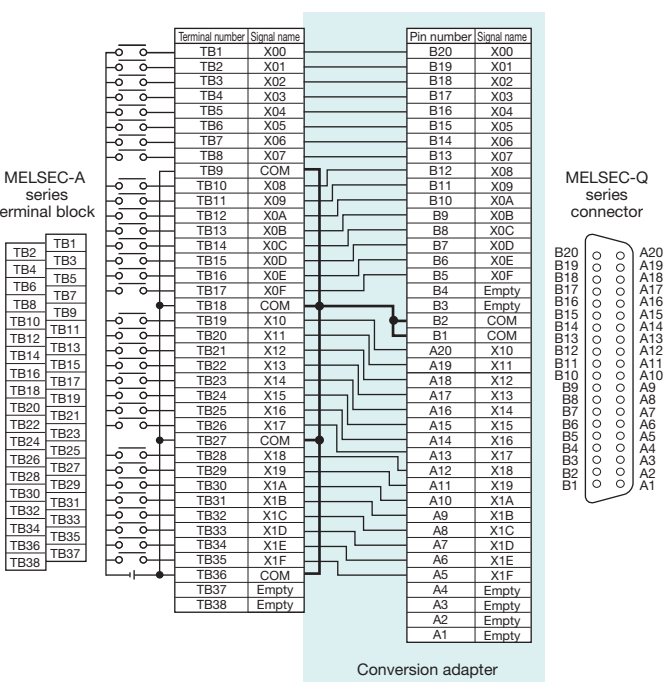

Model	MELSEC-A series	MELSEC-Q series
Specification	AX80, AX80-UL (Source type)	QX80 (Negative common type)
No. of input points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated input voltage	12VDC 24VDC	24VDC
Rated input current	4mA 10mA	Approx. 4mA
ON voltage / ON current	9.5VDC or more / 3mA or more	19V or more / 3mA or more
OFF voltage / OFF current	6VDC or less / 1.5mA or less	11V or less / 1.7mA or less
Input resistance	Approx. 2.4kΩ	Approx. 5.6kΩ
Response time	OFF→ON 10ms or less ON→OFF 10ms or less	1/5/10/20/70ms or less 1/5/10/20/70ms or less
Internal current consumption	55mA (TYP. all points ON)	50mA (TYP. all points ON)
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- In a case where the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB18 on the MELSEC-A series side are used separately, a wiring change is required.
- When a rated input voltage of 12VDC is used, the voltage needs to be changed to 24VDC.
- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

4) ERNT-AQTX41 Terminal block (38P)→Connector (40P)

Conversion adapter model	MELSEC-A series module model	No. of input points	MELSEC-Q series module model
ERNT-AQTX41	AX41 AX41-UL	32 points	QX41 QX41-S2 QX71
	AX31-S1		QX41-S2
	AX41-S1		QX41-S1
	AX71		QX71

[Input module specification comparison chart]

Model	MELSEC-A series	MELSEC-Q series			
Specification	AX41, AX41-UL (Sink type)	QX41 (Positive common type)	QX41-S2 (Positive common type)	QX71 (Positive/Negative common shared type)	
No. of input points	32 points	32 points	32 points	32 points	
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	
Rated input voltage	12VDC 24VDC	24VDC	24VDC	5VDC 12VDC	
Rated input current	4mA 10mA	Approx. 4mA	Approx. 6mA	Approx. 1.2mA 3.3mA	
ON voltage / ON current	9.5VDC or more / 3mA or more	19VDC or more / 3mA or more	15VDC or more / 3mA or more	3.5V or more / 1mA or more	
OFF voltage / OFF current	6VDC or less / 1.5mA or less	11VDC or less / 1.7mA or less	5VDC or less / 1.7mA or less	1V or less / 0.1mA or less	
Input resistance	Approx. 2.4kΩ	Approx. 5.6kΩ	Approx. 3.6kΩ	Approx. 3.3kΩ	
Response time	OFF→ON 10ms or less ON→OFF 10ms or less	1/5/10/20/70ms or less 1/5/10/20/70ms or less	1/5/10/20/70ms or less 1/5/10/20/70ms or less	1/5/10/20/70ms or less 1/5/10/20/70ms or less	
Internal current consumption	110mA (TYP. all points ON)	75mA (TYP. all points ON)	75mA (TYP. all points ON)	70mA (TYP. all points ON)	
Wiring method for common	8 points/common	32 points/common	32 points/common	32 points/common	
External interface	38-point terminal block	40-pin connector	40-pin connector	40-pin connector	

Model	MELSEC-A series	MELSEC-Q series	
Specification	AX31-S1 (Sink type)	QX41 (Positive common type)	QX41-S2 (Positive common type)
No. of input points	32 points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	24VDC	24VDC	24VDC
Rated input current	8.5mA	Approx. 4mA	Approx. 6mA
ON voltage / ON current	16VDC or more / 5mA or more	19VDC or more / 3mA or more	15VDC or more / 3mA or more
OFF voltage / OFF current	8VDC or less / 2mA or less	11VDC or less / 1.7mA or less	5VDC or less / 1.7mA or less
Input resistance	Approx. 2.7kΩ	Approx. 5.6kΩ	Approx. 3.6kΩ
Response time	OFF→ON 10ms or less ON→OFF 10ms or less	1/5/10/20/70ms or less 1/5/10/20/70ms or less	1/5/10/20/70ms or less 1/5/10/20/70ms or less
Internal current consumption	110mA (TYP. all points ON)	75mA (TYP. all points ON)	75mA (TYP. all points ON)
Wiring method for common	32 points/common	32 points/common	32 points/common
External interface	38-point terminal block	40-pin connector	40-pin connector

Model	MELSEC-A series	MELSEC-Q series
Specification	AX41-S1 (Sink type)	QX41-S1 (Positive common type)
No. of input points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated input voltage	12VDC 24VDC	24VDC
Rated input current	4mA 10mA	Approx. 4mA
ON voltage / ON current	9.5VDC or more / 3mA or more	19V or more / 3mA or more
OFF voltage / OFF current	6VDC or less / 1.5mA or less	9.5V or less / 1.5mA or less
Input resistance	Approx. 2.4kΩ	Approx. 5.6kΩ
Response time	OFF→ON 0.1ms or less ON→OFF 0.2ms or less	0.1/0.2/0.4/0.6/1ms 0.1/0.2/0.4/0.6/1ms
Internal current consumption	110mA (TYP. all points ON)	75mA (TYP. all points ON)
Wiring method for common	8 points/common	32 points/common
External interface	38-point terminal block	40-pin connector

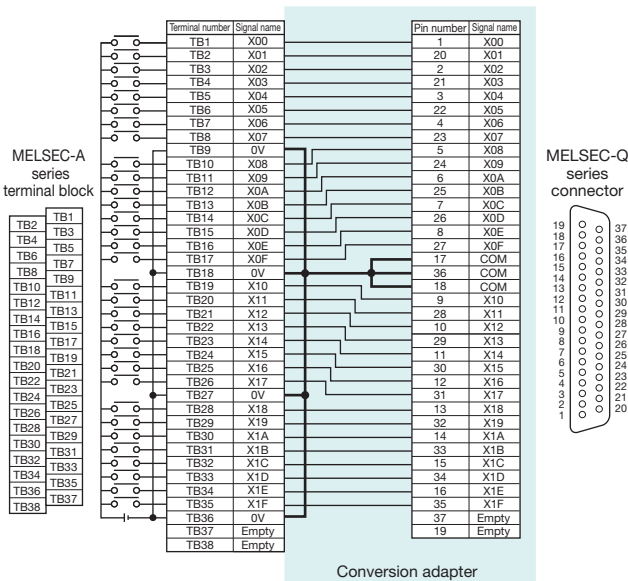

Model	MELSEC-A series	MELSEC-Q series
Specification	AX71 (Sink/Source type)	QX71 (Positive/Negative common shared type)
No. of input points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated input voltage	5VDC 12VDC 24VDC	5VDC 12VDC
Rated input current	3.5mA (TYP) 5.5mA (MAX) 2mA (TYP) 3mA (MAX) 4.5mA (TYP) 6mA (MAX)	Approx. 1.2mA Approx. 3.3mA
ON voltage / ON current	(SW ON) 3.5VDC or more / 1.0mA or more (SW OFF) 5VDC or more / 1.0mA or more	3.5V or more / 1mA or more
OFF voltage / OFF current	(SW ON) 1.1VDC or less / 0.2mA or less (SW OFF) 2VDC or less / 0.2mA or less	1V or less / 0.1mA or less
Input resistance	(SW ON) Approx. 1.4kΩ (SW OFF) Approx. 5.5kΩ	Approx. 3.3kΩ
Response time	OFF→ON 1.5ms or less ON→OFF 3ms or less	1/5/10/20/70ms or less 1/5/10/20/70ms or less
Internal current consumption	110mA (TYP. all points ON)	70mA (TYP. all points ON)
Wiring method for common	8 points/common	32 points/common
External interface	38-point terminal block	40-pin connector

Notes

- When replacing AX41/AX41-UL with QX41/QX41-S2/QX71, AX41-S1 with QX41-S1, or AX71 with QX71 in a case where the number of points per common changes from eight (four circuits) to 32 and the terminal numbers TB9, TB18, TB27, and TB36 on the MELSEC-A series side are used separately, a wiring change is required.
- When replacing AX41/AX41-UL with QX41 or AX41-S1 with QX41-S1 and a rated input voltage of 12VDC is used, the voltage needs to be changed to 24VDC.
- When replacing AX41/AX41-UL with QX71 and a rated input voltage of 24VDC is used, the voltage needs to be changed to 5VDC or 12VDC.
- When replacing AX71 with QX71 and a rated input voltage of 24VDC is used, the voltage needs to be changed to 5VDC or 12VDC.
- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

5) ERNT-AQTX81 Terminal block (38P)→Connector (37P)

Conversion adapter model	MELSEC-A series module model	No. of input points	MELSEC-Q series module model
ERNT-AQTX81	AX81	32 points	QX81
	AX81-S1		QX81-S2

[Input module specification comparison chart]

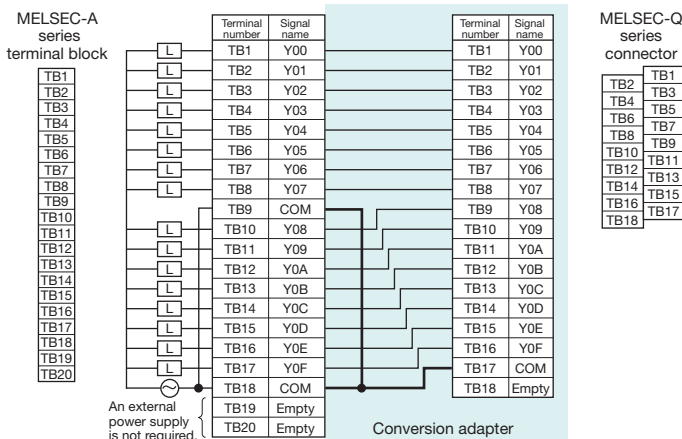

Model		MELSEC-A series				MELSEC-Q series	
		AX81 (Source type)		AX81-S1 (Sink/Source type)		QX81 (Negative common type)	QX81-S2 (Negative common type)
Specification							
No. of input points		32 points		32 points		32 points	32 points
Isolation method		Photocoupler isolation		Photocoupler isolation		Photocoupler isolation	Photocoupler isolation
Rated input voltage		12VDC	24VDC	12VDC	24VDC	24VDC	24VDC
Rated input current		4mA	10mA	2.5mA	5mA	Approx. 4mA	Approx. 6mA
ON voltage		9.5VDC or more		5.6VDC or more		19VDC or more	15VDC or more
/ ON current		/ 3mA or more		/ 1.1mA or more		/ 3mA or more	/ 3mA or more
OFF voltage		6VDC or less		2.4VDC or less		11VDC or less	5VDC or less
/ OFF current		/ 1.5mA or less		/ 0.39mA or less		/ 1.7mA or less	/ 1.7mA or less
Input resistance		Approx. 2.4kΩ		Approx. 4.8kΩ		Approx. 5.6kΩ	Approx. 3.6kΩ
Response time	OFF→ON	10ms or less		10ms or less		1/5/10/20/70ms or less	1/5/10/20/70ms or less
	ON→OFF	10ms or less		10ms or less		1/5/10/20/70ms or less	1/5/10/20/70ms or less
Internal current consumption		110mA (TYP. all points ON)		105mA (TYP. all points ON)		75mA (TYP. all points ON)	75mA (TYP. all points ON)
Wiring method for common		8 points/common		8 points/common		32 points/common	32 points/common
External interface		38-point terminal block		38-point terminal block		37-pin D-sub connector	37-pin D-sub connector

Notes

- When the number of points per common changes from eight (four circuits) to 32 and the terminal numbers TB9, TB18, TB27, and TB36 on the MELSEC-A series side are used separately, a wiring change is required.
- When replacing AX81-S1 with QX81, only the source type is compatible.
- When a rated input voltage of 12VDC is used, the voltage needs to be changed to 24VDC.
- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

6) ERNT-AQTY10 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model
ERNT-AQTY10	AY10	16 points	QY10
	AY11		
	AY11-UL		
	AY11E		
	AY11EEU		

[Output module specification comparison chart]

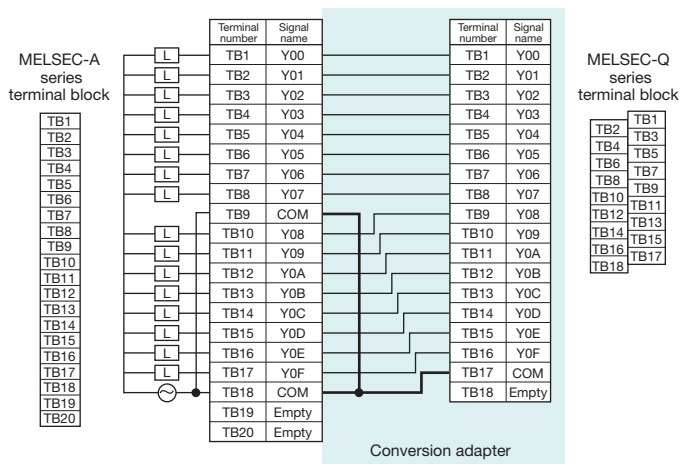

Model	MELSEC-A series				MELSEC-Q series
Specification	AY10	AY11, AY11-UL	AY11E	AY11EEU	QY10
No. of output points	16 points	16 points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	Relay isolation
Rated switching voltage/current	24VDC, 2A/point (Resistance load) 240VAC, 2A/point (COSΦ=1) 8A/common	24VDC, 2A/point (Resistance load) 240VAC, 2A/point (COSΦ=1) 8A/common	24VDC, 2A/point (Resistance load) 240VAC, 2A/point (COSΦ=1) 8A/common	24VDC, 2A/point (Resistance load) 24VAC, 2A/point (COSΦ=1) 8A/common	24VDC, 2A/point (Resistance load) 240VAC, 2A/point (COSΦ=1) 8A/common
Minimum switching load	5VDC, 1mA	5VDC, 1mA	5VDC, 1mA	5VDC, 1mA	5VDC, 1mA
Maximum switching voltage	264VAC, 125VDC	264VAC, 125VDC	250VAC, 125VDC	49.9VAC, 74.9VDC	264VAC, 125VDC
OFF leakage current	—	0.1mA (200VAC, 60Hz)	0.1mA (200VAC, 60Hz)	0.1mA (49.9VAC, 60Hz)	—
Response time	OFF→ON: 10ms or less ON→OFF: 12ms or less	10ms or less 12ms or less	10ms or less 12ms or less	10ms or less 12ms or less	10ms or less 12ms or less
Surge suppressor	No	Varistor (387 to 473V)	Varistor (387 to 473V)	Varistor (387 to 473V)	No
Fuse	No	No	Yes	Yes	No
Internal current consumption	115mA (TYP. all points ON)	115mA (TYP. all points ON)	115mA (TYP. all points ON)	115mA (TYP. all points ON)	430mA (TYP. all points ON)
Wiring method for common	8 points/common	8 points/common	8 points/common	8 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB18 on the MELSEC-A series side are used separately, a wiring change is required.
- The external power supply connected to terminal numbers TB19 and TB20 on the MELSEC-A series side is not required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

7) ERNT-AQTY22 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model
ERNT-AQTY22	AY22	16 points	QY22

[Output module specification comparison chart]

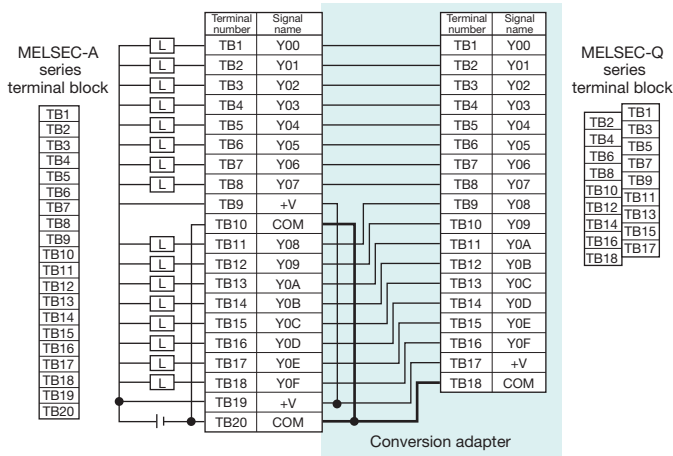

Model	MELSEC-A series	MELSEC-Q series
Specification	AY22	QY22
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	100 to 240VAC, 50/60Hz±5%	100 to 240VAC (+10 / -15%)
Maximum load current	2A/point, 3.3A/common	0.6A/point, 4.8A/common
Minimum load voltage/current	24VAC 100mA, 100VAC 10mA, 240VAC 20mA	24VAC 100mA, 100VAC 25mA, 240VAC 25mA
Maximum rush current	40A 10ms or less, 15A 100ms or less	20A, one cycle or less
OFF leakage current	1.5mA (120VAC, 60Hz) 3mA (240VAC, 60Hz)	1.5mA or less (at 120V, 60Hz) 3mA or less (at 240V, 60Hz)
ON maximum voltage drop	1.5VAC or less 1.8VAC or less 5VAC or less (0.2A or less)	1.5V or less
Response time	OFF→ON: 1ms or less ON→OFF: 0.5 cycles + 1ms or less	1ms + 0.5Hz or less 1ms + 0.5Hz or less (Rated load, resistance load)
Surge suppressor	CR absorber (0.022μF + 47Ω) Varistor (387 to 473V)	CR absorber
Fuse	Yes	No (Fuse installation recommended with external wiring)
Internal current consumption	305mA (TYP. all points ON)	250mA (MAX. all points ON)
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 (one circuit) and the terminal numbers TB9 and TB18 on the MELSEC-A series side are used separately, a wiring change is required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

8) ERNT-AQTY40 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model
ERNT-AQTY40	AY40	16 points	QY40P
	AY40-UL		
	AY40P		QY70
	AY70 AY70-UL		

Notes

- When the number of points per common changes from eight (two circuits) to 16 (one circuit) and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-A series side are used separately, a wiring change is required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

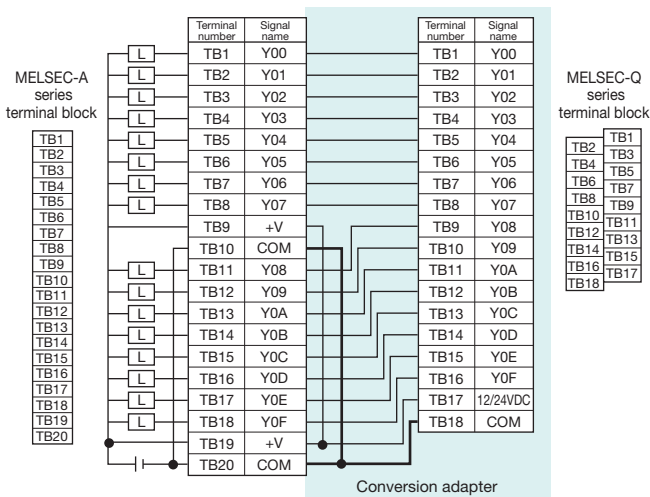

[Output module specification comparison chart]

Model	MELSEC-A series		MELSEC-Q series
Specification	AY40, AY40-UL (Sink type)	AY40P (Sink type)	QY40P (Sink type)
No. of output points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12/24VDC	12 to 24VDC
Maximum load current	0.1A/point, 0.8A/common	0.1A/point, 0.8A/common	0.1A/point, 1.6A/common
Maximum rush current	0.4A	0.38A, 5ms or less	0.7A, 10ms or less
OFF leakage current	0.1mA or less	0.1mA or less	0.1mA or less
ON maximum voltage drop	2.5VDC (0.1A), 1.75VDC (5mA), 1.7VDC (1mA)	2.5VDC (0.1A), 1.75VDC (5mA), 1.7VDC (1mA)	0.1VDC (TYP) 0.1A, 0.2VDC (MAX) 0.1A
Response time	OFF→ON	2ms or less	1ms or less
	ON→OFF	2ms or less (Resistance load)	1ms or less (Rated load, resistance load)
Internal current consumption	115mA (TYP. all points ON)	115mA (TYP. all points ON)	65mA (TYP. all points ON)
Surge suppressor	Clamp diode	Clamp diode	Zener diode
Fuse	No	No	No
Protection function	No	(thermal protection, short-circuit protection)	(thermal protection, short-circuit protection)
Wiring method for common	8 points/common	8 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	18-point terminal block

Model	MELSEC-A series	MELSEC-Q series
Specification	AY70, AY70-UL (Sink type)	QY70 (Sink type)
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	5/12VDC	5 to 12VDC
Maximum load current	16mA/point, 128mA/common	16mA/point, 256mA/common
Maximum rush current	50mA, 10ms	40mA, 10ms or less
OFF leakage current	V _{OH} : 3.5VDC (V _{CC} =DC5V, I _{OH} =0.4mA)	V _{OH} : 3.5VDC (V _{CC} =5VDC, I _{OH} =0.4mA)
ON maximum voltage drop	V _{OL} : 0.2VDC (I _{OL} =16mA)	V _{OL} : 0.3VDC
Response time	OFF→ON	1ms or less
	ON→OFF	1ms or less
Internal current consumption	100mA (TYP. all points ON)	95mA (TYP. all points ON)
Surge suppressor	No	No
Fuse	No	Yes
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

9) ERNT-AQTY50 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model
ERNT-AQTY50	AY50 AY50-UL	16 points	QY50

[Output module specification comparison chart]

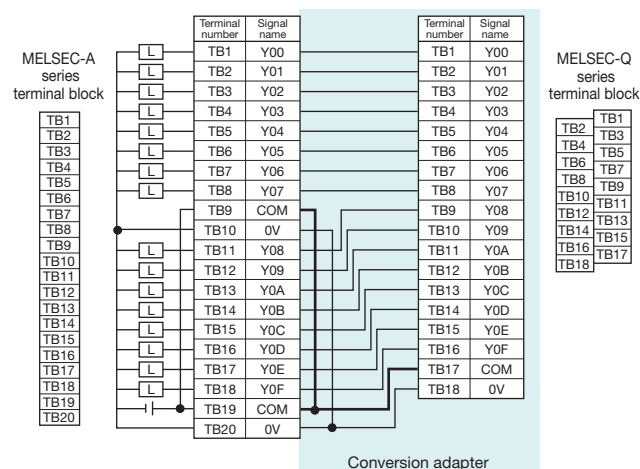

Model	MELSEC-A series	MELSEC-Q series
Specification	AY50, AY50-UL (Sink type)	QY50 (Sink type)
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12 to 24VDC
Maximum load current	0.5A/point, 2A/common	0.5A/point, 4A/common
Maximum rush current	7A 10ms or less, 3.5A 100ms or less	4A, 10ms or less
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	0.9VDC (TYP) 0.5A, 1.5VDC (MAX) 0.5A	0.2VDC (TYP) 0.5A, 0.3VDC (MAX) 0.5A
Response time	OFF→ON	2ms or less
	ON→OFF	2ms or less (resistance load)
Internal current consumption	115mA (TYP. all points ON)	80mA (TYP. all points ON)
Surge suppressor	Varistor (52 to 62V)	Zener diode
Fuse	Yes	Yes
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 (one circuit) and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-A series side are used separately, a wiring change is required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

10) ERNT-AQTY80 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model
ERNT-AQTY80	AY80	16 points	QY80

[Output module specification comparison chart]

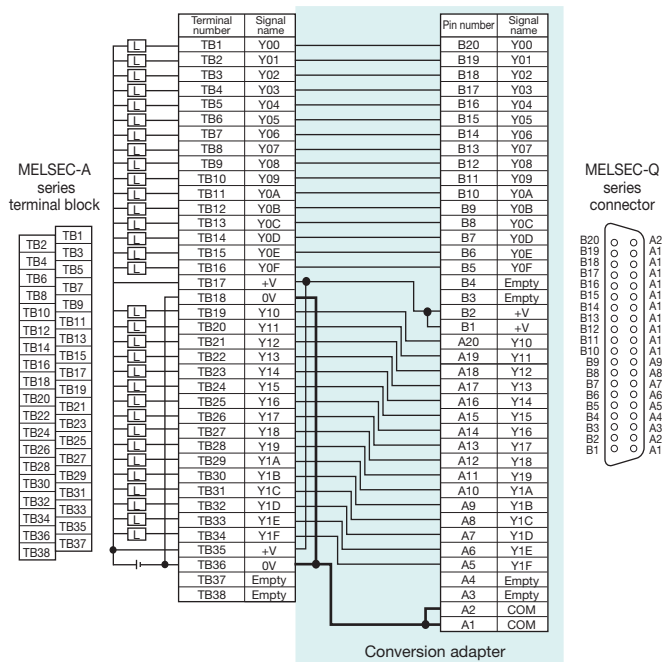

Specification	Model	
	MELSEC-A series	MELSEC-Q series
	AY80 (Source type)	QY80 (Source type)
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12 to 24VDC
Maximum load current	0.5A/point, 2A/common	0.5A/point, 4A/common
Maximum rush current	7A 10ms or less, 3.5A 100ms or less	4A, 10ms or less
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	1.5VDC (MAX) 0.5A	0.2 VDC (TYP) 0.5A, 0.3 VDC (MAX) 0.5A
Response time	OFF→ON	2ms or less
	ON→OFF	2ms or less (Resistance load)
Internal current consumption	115mA (TYP. all points ON)	80mA (TYP. all points ON)
Surge suppressor	Varistor (52 to 62V)	Zener diode
Fuse	Yes	Yes
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 (one circuit) and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-A series side are used separately, a wiring change is required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

11) ERNT-AQTY41 Terminal block (38P)→Connector (40P)

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model
ERNT-AQTY41	AY41	32 points	QY41P
	AY41-UL		
	AY41P		QY71

[Output module specification comparison chart]

Specification	Model	
	MELSEC-A series	MELSEC-Q series
	AY41, AY41-UL (Sink type)	QY41P (Sink type)
No. of output points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12 to 24VDC
Maximum load current	0.1A/point, 1.6A/common	0.1A/point, 1.0A/common
Maximum rush current	0.4A	0.38A, 5ms or less
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	2.5VDC (0.1A), 1.75VDC (5mA), 1.7VDC (1mA)	2.5VDC (0.1A), 1.75VDC (5mA), 1.7VDC (1mA)
Response time	OFF→ON	2ms or less
	ON→OFF	2ms or less (Resistance load)
Internal current consumption	230mA (TYP. all points ON)	230mA (TYP. all points ON)
Surge suppressor	Clamp diode	Clamp diode
Fuse	No	No; With protection function (thermal protection, short-circuit protection)
Wiring method for common	16 points/common	16 points/common
External interface	38-point terminal block	40-pin connector

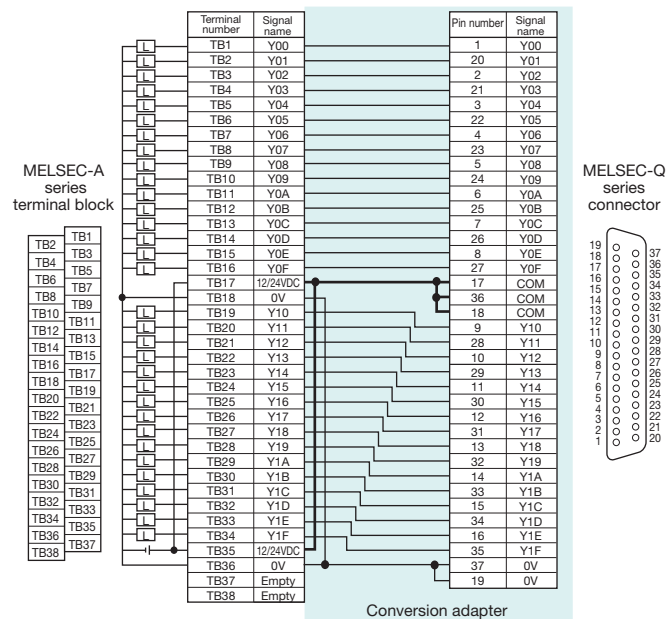

Specification	Model	
	MELSEC-A series	MELSEC-Q series
	AY71 (Sink type)	QY71 (Sink type)
No. of output points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	5/12VDC	5 to 12VDC
Maximum load current	16mA/point, 256mA/common (sink load)	16mA/point, 512A/common
Maximum rush current	50mA 10ms	40mA, 10ms or less
OFF leakage current	V _{OH} : 3.5VDC (V _{CC} =5VDC, I _{OH} =0.4mA)	V _{OH} : 3.5VDC (V _{CC} =5VDC, I _{OH} =0.4mA)
ON maximum voltage drop	V _{OL} : 0.2VDC (I _{OL} =16mA)	V _{OL} : 0.3VDC
Response time	OFF→ON	1ms or less
	ON→OFF	1ms or less
Internal current consumption	200mA (TYP. all points ON)	150mA (TYP. all points ON)
Surge suppressor	No	No
Fuse	No	Yes
Wiring method for common	16 points/common	32 points/common
External interface	38-point terminal block	40-pin connector

Notes

- When the number of points per common changes from 16 (two circuits) to 32 (one circuit) and the terminal numbers TB17 and TB35 as well as TB18 and TB36 on the MELSEC-A series side are used separately, a wiring change is required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

12) ERNT-AQTY81 Terminal block (38P)→Connector (37P)

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model
ERNT-AQTY81	AY81	32 points	QY81P
	AY81EP		

[Output module specification comparison chart]

Model	MELSEC-A series		MELSEC-Q series
Specification	AY81 (Source type)	AY81EP (Source type)	QY81P (Source type)
No. of output points	32 points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12/24VDC	12 to 24VDC
Maximum load current	0.5A/point, 4A/common	0.8A/point, 0.4A/point (60% ON, 55°C)	0.1A/point, 2A/common
Maximum rush current	4A, 10ms or less	No restrictions (Short-circuit protection)	0.7A, 10ms or less
OFF leakage current	0.1mA or less	1mA or less	0.1mA or less
ON maximum voltage drop	1.5VDC (MAX) 0.5A	1.1 V (TYP) 0.8A, 1.5V (MAX) 0.8A	0.1VDC (TYP) 0.1A, 0.2VDC (MAX) 0.1A
Response time	OFF→ON: 2ms or less ON→OFF: 2ms or less (Resistance load)	0.5ms or less 1.5ms or less	1ms or less (Rated load, resistance load)
Internal current consumption	230mA (TYP. all points ON)	230mA (TYP. all points ON)	95mA (TYP. all points ON)
Surge suppressor	Varistor (52 to 62V)	Surge absorbing diode	Zener diode
Fuse	No	No; With protection function (thermal protection, short-circuit protection)	No; With protection function (thermal protection, short-circuit protection)
Wiring method for common	16 points/common	16 points/common	32 points/common
External interface	38-point terminal block	38-point terminal block	37-pin D-sub connector

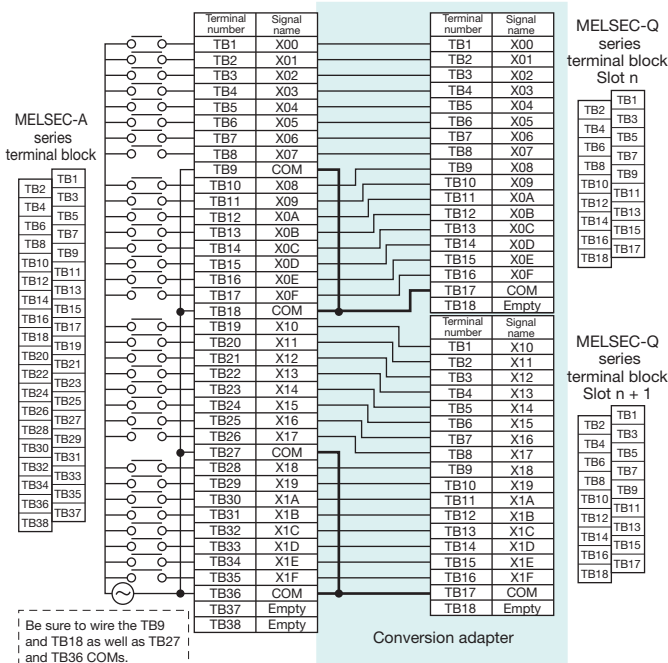

Notes

- When the number of points per common changes from 16 (two circuits) to 32 (one circuit) and the terminal numbers TB17 and TB35 as well as TB18 and TB36 on the MELSEC-A series side are used separately, a wiring change is required. When replacing with QY80 (two modules) using the ERNT-AQTY51 (page 1-14. Not applicable to Mitsubishi Electric Q series large type base units), a wiring change is not required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

2-slot type (Not applicable to Mitsubishi Electric Q series large type base units)

1) ERNT-AQTX11 Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-A series module model	No. of input points	MELSEC-Q series module model	No. of required modules
ERNT-AQTX11	AX11	32 points	QX10	2 modules
	AX11EU			

[Input module specification comparison chart]

Model	MELSEC-A series		MELSEC-Q series
Specification	AX11	AX11EU	QX10
No. of input points	32 points	32 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	100 to 120VAC 50/60Hz	100 to 120VAC 50/60Hz	100 to 120VDC (+10/-15%) 50/60Hz (±3Hz)
Rated input current	10mA (100VAC, 60Hz)	12mA (120VAC, 60Hz)	Approx. 8mA (100VAC, 60Hz) Approx. 7mA (100VAC, 50Hz)
Rush current	300mA, maximum, within 0.3ms (at 132VAC)	300mA, maximum, within 1ms (at 132VAC)	200mA, maximum, within 1ms (at 132VAC)
ON voltage / ON current	80VAC or more / 6mA or more	79VAC or more / 6mA or more	80VAC or more / 5mA or more (50Hz, 60Hz)
OFF voltage / OFF current	40VAC or less / 4mA or less	40VAC or less / 4mA or less	30VAC or less / 1.7mA or less (50Hz, 60Hz)
Input impedance	Approx. 10kΩ (60Hz), Approx. 12kΩ (50Hz)	Approx. 10kΩ (60Hz), Approx. 12kΩ (50Hz)	Approx. 12kΩ (60Hz), Approx. 15kΩ (50Hz)
Response time	OFF→ON: 15ms or less ON→OFF: 25ms or less	15ms or less (100VAC, 60Hz) 25ms or less (100VAC, 60Hz)	15ms or less (100VAC 50Hz, 60Hz) 20ms or less (100VAC 50Hz, 60Hz)
Internal current consumption	110mA (TYP. all points ON)	150mA (TYP. all points ON)	50mA (TYP. all points ON)
Wiring method for common	32 points/common	32 points/common	16 points/common
External interface	38-point terminal block	38-point terminal block	18-point terminal block

Notes

- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- Be sure to wire the COMs of terminal numbers TB9 and TB18 as well as TB27 and TB36 of the MELSEC-A series side.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

2) ERNT-AQTY10A Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model	No. of required modules
ERNT-AQTY10A	AY10A	16 points	QY18A	2 modules
	AY10A-UL			
	AY11AEU			

[Output module specification comparison chart]

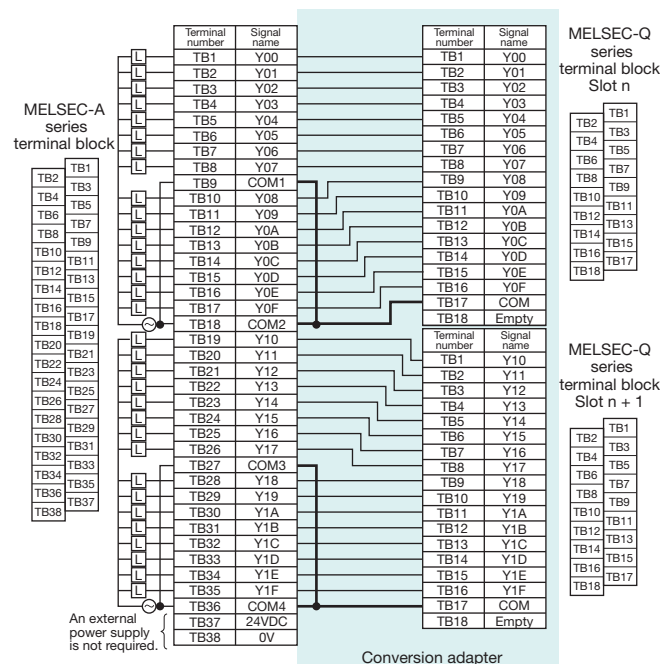

Model		MELSEC-A series		MELSEC-Q series	
		AY10A AY10A-UL	AY11A	AY11AEU	QY18A
Specification					
No. of output points		16 points			8 points
Isolation method		Photocoupler isolation			Relay isolation
Rated switching voltage/current	24VDC, 2A/point (Resistance load)		24VDC 2A/point (Resistance load)	24VDC, 2A/point (Resistance load)	
	240VAC, 2A/point (COSΦ=1)		24VAC 2A/point (COSΦ=1)	240VAC, 2A/point (COSΦ=1)	
Minimum switching load		5VDC, 1mA			5VDC, 1mA
Maximum switching load		264VAC, 125VDC		49.9VAC, 74.9VDC	264VAC, 125VDC
OFF leakage current		—	0.1mA (200VAC, 60Hz)	0.1mA (49.9VAC, 60Hz)	—
Response time	OFF→ON	10ms or less			10ms or less
	ON→OFF	12ms or less			12ms or less
Surge suppressor		No	Varistor (387 to 473V)		No
Fuse		No			No
Internal current consumption		115mA (TYP. all points ON)			240mA (TYP. all points ON)
Wiring method for common		No (All points independent contacts)			No (All points independent contacts)
External interface		38-point terminal block			18-point terminal block

Notes

1. An external power supply connected to terminal numbers TB37 and TB38 on the MELSEC-A series side is not required.
2. For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
3. QY18A is a 16-point occupied module. Thus, Y08-Y0F require a program change to Y10-Y17.
4. For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

3) ERNT-AQTY13 Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model	No. of required modules
ERNT-AQTY13	AY13	32 points	QY10	2 modules
	AY13E			
	AY13EU			

[Output module specification comparison chart]

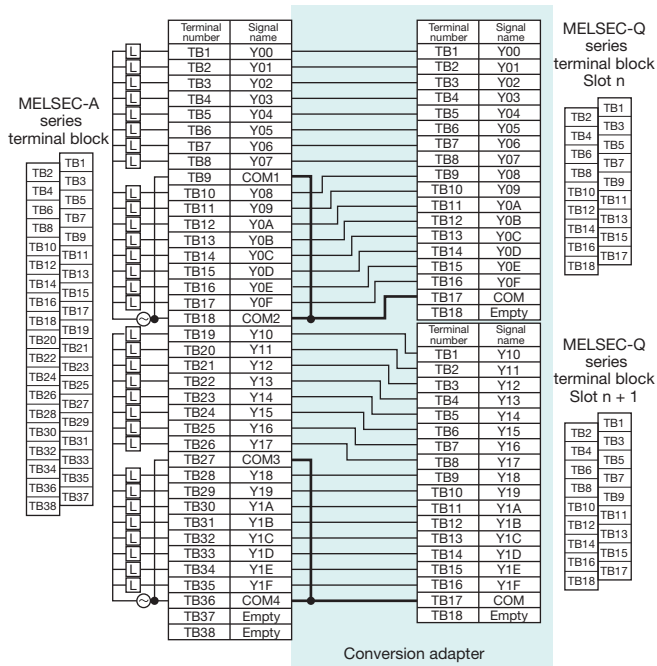

Model	MELSEC-A series			MELSEC-Q series
	AY13	AY13E	AY13EU	QY10
Specification				
No. of output points	32 points			16 points
Isolation method	Photocoupler isolation			Relay isolation
Rated switching voltage/current	24VDC, 2A/point (Resistance load)		24VDC 2A/point (Resistance load)	24VDC, 2A/point (Resistance load)
	240VAC, 2A/point (COSΦ=1)		24VAC 2A/point (COSΦ=1)	240VAC, 2A/point (COSΦ=1)
Minimum switching load	5VDC, 1mA			5VDC, 1mA
Maximum switching load	264VAC, 125VDC	250VAC, 125VDC	49.9VAC, 74.9VDC	264VAC, 125VDC
OFF leakage current	—			—
Response time	OFF→ON	10ms or less		10ms or less
	ON→OFF	12ms or less		12ms or less
Surge suppressor	No	No		No
Fuse	No	Yes	No	No
Internal current consumption	230mA (TYP. all points ON)			430mA (TYP. all points ON)
Wiring method for common	8 points/common			16 points/common
External interface	38-point terminal block			18-point terminal block

Notes

1. In a case where the number of points per common changes from eight (four circuits) to 16 (one circuit) using two modules and the terminal numbers TB9 and TB18 as well as TB27 and TB36 on the MELSEC-A series side are used separately, a wiring change is required.
2. An external power supply connected to terminal numbers TB37 and TB38 on the MELSEC-A series side is not required.
3. For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
3. For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

4) ERNT-AQTY23 Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model	No. of required modules
ERNT-AQTY23	AY23	32 points	QY22	2 modules

[Output module specification comparison chart]

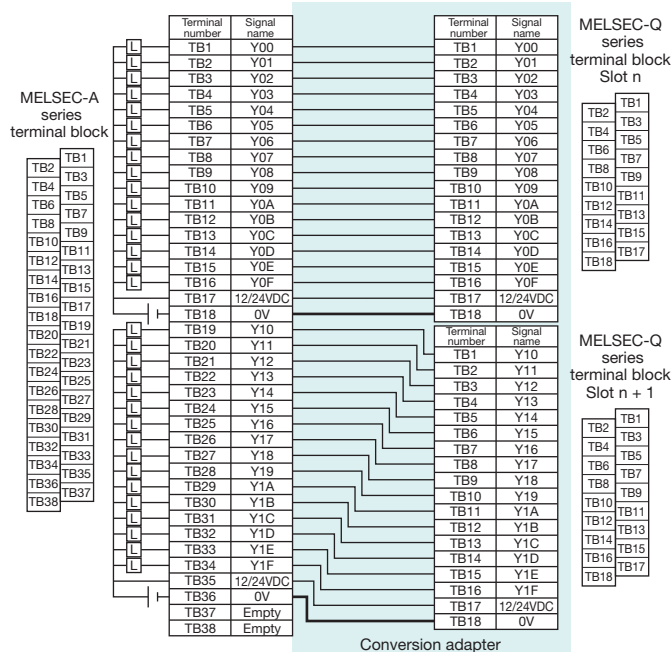

Model	MELSEC-A series	MELSEC-Q series
Specification	AY23	QY22
No. of output points	32 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	100 to 240VAC 40 to 70Hz	100 to 240VAC (+10 / -15%)
Maximum load current	0.6A/point, 2.4A/common	0.6A/point, 4.8A/common
Minimum load voltage/current	24VAC 100mA, 100VAC 10mA, 240VAC 10mA	24VAC 100mA, 100VAC 25mA, 240VAC 25mA
Maximum rush current	20A 10ms or less, 8A 100ms or less	20A, one cycle or less
OFF leakage current	1.5mA (120VAC, 60Hz) 3mA (240VAC, 60Hz)	1.5mA or less (at 120V, 60Hz) 3mA or less (at 240V, 60Hz)
ON maximum voltage drop	1.5VAC or less (100 to 600mA), 1.8VAC or less (50 to 100mA), 2VAC or less (10 to 50mA)	1.5V or less
Response time	OFF→ON: 1ms ON→OFF: 0.5 cycles + 1ms or less	1ms + 0.5Hz or less 1ms + 0.5Hz or less (Rated load, resistance load)
Surge suppressor	CR absorber	CR absorber
Fuse	Yes	No (Fuse installation recommended with external wiring)
Internal current consumption	590mA (TYP. all points ON)	250mA (MAX all points ON)
Wiring method for common	8 points/common	16 points/common
External interface	38-point terminal block	18-point terminal block

Notes

- In a case where the number of points per common changes from eight (four circuits) to 16 (one circuit) using two modules and the terminal numbers TB9 and TB18 as well as TB27 and TB36 on the MELSEC-A series side are used separately, a wiring change is required.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

5) ERNT-AQTY51 Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-A series module model	No. of output points	MELSEC-Q series module model	No. of required modules
ERNT-AQTY51	AY51	32 points	QY50	2 modules
	AY51-UL			
	AY81		QY80	
	AY81EP			

[Output module specification comparison chart]

Model	MELSEC-A series	MELSEC-Q series
Specification	AY51, AY51-UL	AY51-S1
No. of output points	32 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12 to 24VDC
Maximum load current	0.5A/point, 4A/common	0.3A/point, 2A/common (1A / fuse common)
Maximum rush current	4A, 10ms or less	3A, 10ms or less
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	0.9VDC (TYP) 0.5A, 1.5VDC (MAX) 0.5A	1VDC (TYP) 0.3 A, 1.5VDC (MAX) 0.3A
Response time	OFF→ON: 2ms or less ON→OFF: 2ms or less (Resistance load)	1ms or less 1ms or less (Rated load, resistance load)
Surge suppressor	Varistor (52 to 62V)	Transistor built-in zener diode
Fuse	No	Yes
Internal current consumption	230mA (TYP. all points ON)	310mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common
External interface	38-point terminal block	18-point terminal block

Model	MELSEC-A series	MELSEC-Q series
Specification	AY81 (Source type)	AY81EP (Source type)
No. of output points	32 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12 to 24VDC
Maximum load current	0.5A/point, 4A/common	0.8A/point, 0.4A/common (60%ON, 55°C)
Maximum rush current	4A, 10mA or less	No restriction (Short-circuit protection)
OFF leakage current	0.1mA or less	1mA or less
ON maximum voltage drop	1.5VDC (MAX) 0.5A	1.1V (TYP) 0.8A, 1.5V (MAX) 0.8A
Response time	OFF→ON: 2ms or less ON→OFF: 2ms or less (Resistance Load)	0.5ms or less 1.5ms or less
Surge suppressor	Varistor (52 to 62V)	Surge absorbing diode
Fuse	No	No; With protection circuit (thermal protection, short-circuit protection)
Internal current consumption	230mA (TYP. all points ON)	80mA (TYP all points ON)
Wiring method for common	16 points/common	16 points/common
External interface	38-point terminal block	18-point terminal block

Notes

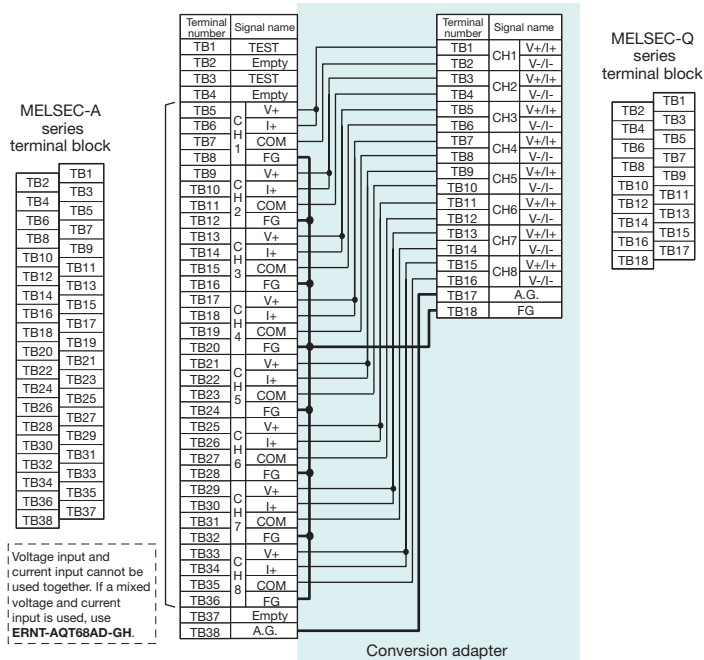

- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the input module used. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- When the terminal number TB17/TB35 and TB18/TB36 on the MELSEC-A series side are not separated (are the shared common), it also can be replaced with the QY81P (one module) using the ERNT-AQTY81 (page 1-12). (A wiring change is not required.)

For Analog Modules

1-slot type (Applicable to Mitsubishi Electric Q series large type base units as well)

1) ERNT-AQT68AD Terminal block (38P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of channels	MELSEC-Q series module model
ERNT-AQT68AD	A68AD (Voltage input)	8 channels	Q68ADV
	A68AD (Current input)		Q68ADI
	A68AD-S2 (Voltage input)		Q68ADV
	A68AD-S2 (Current input)		Q68ADI

[Specification comparison chart]

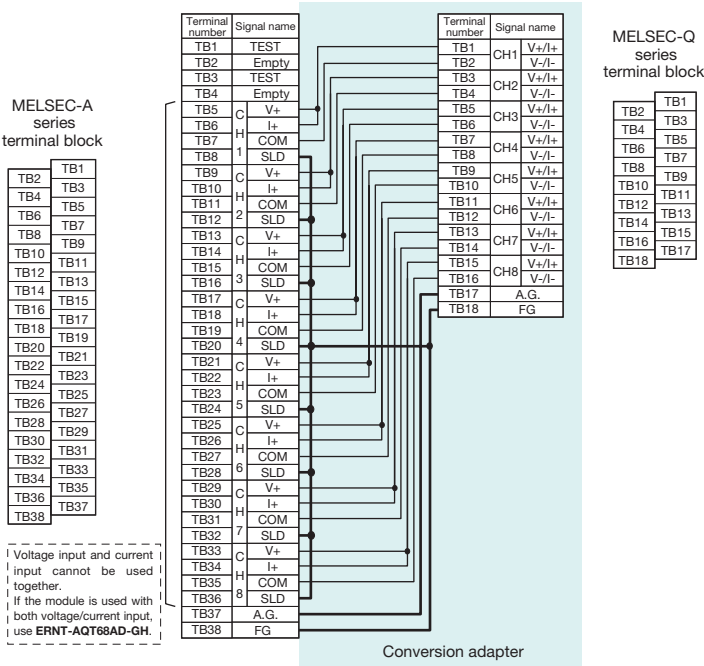

Model		MELSEC-A series	MELSEC-Q series								
Specification		A68AD, A68AD-S2	Q68ADV		Q68ADI						
Analog input	Voltage	-10 to 0 to 10VDC (Input resistance hardware version K or later: 1MΩ, Hardware version J or before: 30kΩ)	-10 to 0 to 10VDC (Input resistance: 1MΩ)		-						
	Current	4 to 20mA (Input resistance 250 Ω)	-		0 to 20mA DC (Input resistance: 250Ω)						
Digital output		ACPU: 16-bit signed binary (-2048 to +2047) K2ACPU: 16-bit signed binary (±2047)	16-bit signed binary (Normal resolution mode: -4096 to 4095, High resolution mode: -12288 to 12287, -16384 to 16383)								
I/O characteristics	Analog input	+10V	Analog input range	Normal resolution mod		High resolution mode					
		+5V or +20mA		Digital output value	Maximum resolution	Digital output value	Maximum resolution				
	Digital output	+2000	Voltage	0 to 10V	0 to 4000	2.5mV	0 to 16000	0.625mV			
		+1000					0 to 5V	1.25mV	0 to 12000	0.416mV	
	0V or +4mA	1 to 5V									1.0mV
	-5V or -12mA	-10 to 10V					2.5mV	-16000 to 16000	0.625mV		
-10V	-2000	User range setting	-4000 to 4000	0.375mV	-12000 to 12000	0.333mV					
Maximum resolution	Voltage	0 to 20mA	0 to 4000	5μA	0 to 12000	1.66μA					
							4 to 20mA	4μA	1.33μA		
										User range setting	-4000 to 4000
							Voltage: 5mV (1/2000) Current: 20μA (1/1000)				
Overall accuracy	±1.0%	Analog input range	Normal resolution mod		High resolution mode						
			Ambient temperature 0 to 55°C		Ambient temperature 0 to 55°C						
			With temperature drift correction		Ambient temperature drift correction		Ambient temperature drift correction				
			25±5°C		25±5°C						
			Voltage	0 to 10V	±0.3% (±12 digits)	±0.4% (±16 digits)	±0.1% (±4 digits)	±0.3% (±48 digits)	±0.4% (±64 digits)	±0.1% (±16 digits)	
				-10 to 10V							
				0 to 5V							
				1 to 5V							
			Current	User range setting	±0.3% (±12 digits)	±0.4% (±16 digits)	±0.1% (±4 digits)	±0.3% (±36 digits)	±0.4% (±48 digits)	±0.1% (±12 digits)	
				0 to 20mA							
				4 to 20mA							
				User range setting							
Maximum conversion speed		2.5ms/channel		80μs/channel (Add 160μs regardless of the number of channels used when temperature drift correction is used.)							
Absolute maximum input	Voltage	±15V		±15V							
	Current	±30mA		±30mA							
No. of analog input points		8 channels/module		8 channels/module							
Isolation method	Between input terminal and programmable controller power supply	Photocoupler isolation		Photocoupler isolation							
	Between channels	Non-isolated		Non-isolated							
No. of occupied points		32 points		16 points							
Connected terminal block		38-point terminal block		18-point terminal block							
Current consumption		Hardware version K or later: 0.39A Hardware version J or before: 0.9A		0.64A							

•Program precautions

- With A68AD/A68AD-S2 and Q68ADV/Q68ADI, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- Q68ADV/Q68ADI has a faster conversion speed than A68AD/A68AD-S2. As a result, the possibility exists that noise not introduced in A68AD/A68AD-S2 will be introduced as analog signals in Q68ADV/Q68ADI. In such a case, use an averaging processing function to remove the impact of the noise.

2) ERNT-AQT68ADN Terminal block (38P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of channels	MELSEC-Q series module model
ERNT-AQT68ADN	A68ADN (Voltage input)	8 channels	Q68ADV
	A68ADN (Current input)		Q68ADI

Notes

1. If the module is used with voltage input only or current input only, use **ERNT-AQT68ADN**.

For Q68ADV/Q68ADI analog input, voltage input and current input cannot be used together in a single module. If the module uses both voltage and current inputs together, use **ERNT-AQT68AD-GH**.

2. Q68ADV/A68ADI does not have an offset/gain setting terminal. For offset/gain setting, refer to the Q68ADV/A68ADI user's manual.

3. For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Reference to "L (NA) 08046ENG Transition from MELSEC-A/QnA (LargeType) Series to Q Series Handbook" published by Mitsubishi Electric is recommended. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

[Specification comparison chart]

Model		MELSEC-A series				MELSEC-Q series							
Specification		A68ADN				Q68ADV			Q68ADI				
Analog input	Voltage	-10 to 0 to 10VDC (Input resistance: 1MΩ)				-10 to 10VDC (Input resistance: 1MΩ)			—				
	Current	-20 to 0 to 20mA (Input resistance: 250MΩ)				—			0 to 20mA DC (Input resistance: 250Ω)				
Digital output		16-bit signed binary When set to 1/4000, -4096 to 4095 When set to 1/8000, -8192 to 8191 When set to 1/12000, -12287 to 12287				16-bit signed binary (Normal resolution mode: -4096 to 4095, High resolution mode: -12288 to 12287, -16384 to 16383)							
I/O characteristics	Analog input	Digital output value (With a 5V/20mA gain and 0V/0mA offset)				Analog input range		Normal resolution mode		High resolution mode			
		When set to 1/4000	When set to 1/8000	When set to 1/12000	Voltage	0 to 10V	0 to 4000	2.5mV	0 to 16000	0.625mV

Connected terminal block		38-point terminal block				18-point terminal block							
Current consumption		0.4A				0.64A							

•Program precautions

- With A68ADN and Q68ADV/Q68ADI, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- Q68ADV/Q68ADI has a faster conversion speed than A68ADN, resulting in the possibility that noise not introduced in A68ADN will be introduced as analog signals in Q68ADV/Q68ADI. In such a case, use an averaging processing function to remove the impact of the noise.

3) ERNT-AQT62DA Terminal block (20P)→Terminal block (18P)

	Current	0.35A			0.35A			0.15A					

•Program precautions

With A62DA/A62DA-S1 and Q62DAN, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

4) ERNT-AQT68DA Terminal block (38P)→Terminal block (18P)

Conversion adapter model	MELSEC-A series module model	No. of channels	MELSEC-Q series module model
ERNT-AQT68DA	A68DAV	8 channels	Q68DAVN
	A68DAI		Q68DAIN
	A68DAI-S1		

Notes

- If you want to ground FG to Q68DAVN/Q68DAIN, perform grounding from the FG terminal of Q68DAVN/Q68DAIN.
- Q68DAVN/Q68DAIN does not have an offset/gain setting terminal or analog output hold/clear setting terminal. Analog output hold/clear setting needs to be performed using Q68DAVN/Q68DAIN intelligent function module switch settings. For offset/gain analog output hold/clear setting, refer to the Q68DAVN/A68DAIN user's manual.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Reference to "L (NA) 08046ENG Transition from MELSEC-A/QnA (Large Type) Series to Q Series Handbook" published by Mitsubishi Electric is recommended. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

●Program precautions

With A68DAV/A68DAI/A68DAI-S1 and Q68DAVN/Q68DAIN, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

2-slot type (Not applicable to Mitsubishi Electric Q series large type base units)

1) ERNT-AQT68AD-GH Terminal block (38P)→Terminal block (18P)×2

Conversion adapter model	MELSEC-A series module model	No. of channels	MELSEC-Q series module model	No. of required modules
ERNT-AQT68AD-GH	A68AD (Voltage/Current mixed input)	8 channels	Q64AD-GH	2
	A68AD-S2 (Voltage/Current mixed input)			
	A68ADN (Voltage/Current mixed input)			

Notes

1. For analog input, voltage/current mixed input is possible.

2. When replacing A68AD, A68AD-S2 with Q64AD-GH (two modules), the AG connected to terminal number TB38 on the MELSEC-A series side is not required.
3. When replacing A68ADN with Q64AD-GH (two modules), the AG connected to terminal number TB37 and the FG connected to terminal number TB38 on the MELSEC-A series side are not required.
4. Q64AD-GH does not have an offset/gain setting terminal. For offset/gain setting, refer to the Q64AD-GH user's manual.
5. For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Reference to "L (NA) 08046ENG Transition from MELSEC-A/QnA (Large Type) Series to Q Series Handbook" published by Mitsubishi Electric is recommended. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

[Specification comparison chart]

Model		MELSEC-A series	MELSEC-Q series					
Specification		A68AD, A68AD-S2	Q64AD-GH					
Analog input	Voltage	-10 to 0 to 10VDC (Input resistance hardware version K or later: 1MΩ, Hardware version J or before: 30kΩ)	-10 to 10 VDC (Input resistance: 1MΩ)

Current consumption		0.4A				0.89A					

●Program precautions

With A68AD/A68AD-S2/A68ADN and Q64AD-GH, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

2) ERNT-AQT616AD Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-A series module model	No. of channels	MELSEC-Q series module model	No. of required modules
ERNT-AQT616AD	A616AD (Voltage input)	16 channels	Q68ADV	2 modules
	A616AD (Current input)		Q68ADI	

Notes

1. If you want to ground the AG terminal (terminal number TB17) on the MELSEC-Q series side, perform grounding using terminal numbers TB36 and TB37 on the MELSEC-A series side.

Use these if you want to ground the AG terminal.

TB35	Empty
TB36	Empty (A.G)
TB37	Empty (A.G)
TB38	FG

2. With Q68ADV/Q68ADI analog input, voltage and current mixed input cannot be used in a single module. If CH0-7 and CH8-F on the MELSEC-A series side are used with both voltage and current inputs mixed together, this product cannot be used.

3. For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Reference to "L (NA) 08046ENG Transition from MELSEC-A/QnA (Large Type) Series to Q Series Handbook" published by Mitsubishi Electric is recommended. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

[Input module specification comparison chart]

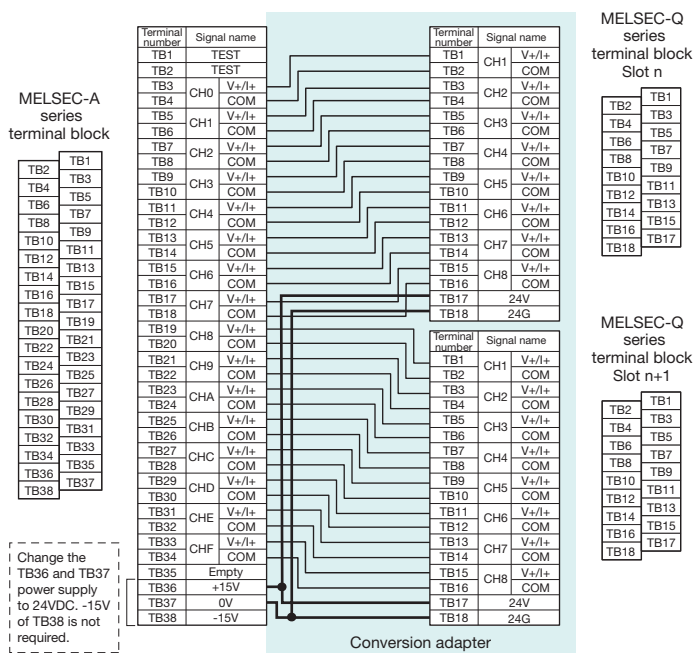

Specification		Model	MELSEC-A series			MELSEC-Q series							
			A616AD			Q68ADV			Q68ADI				
Analog input	Voltage	-10 to 0 to 10VDC (Input resistance: 1MΩ)			-10 to 10VDC (Input resistance: 1MΩ)			-

		-20 to 20	20μA (1/2000)	1000 to 3000 -1000 to 1000									
		-20 to 20	10μA (1/4000)	0 to 4000 -2000 to 2000									
Overall accuracy	Analog input range	0 to 10V -10 to 10V -5V to 5V -20mA to 20mA	±0.3% (Digital value ±12)		Analog input range	Normal resolution mode		High resolution mode					
						Ambient temperature 0 to 55°C		Ambient temperature 0 to 55°C		Ambient temperature 25±5°C			
						With temperature drift correction	No temperature drift correction	With temperature drift correction	No temperature drift correction				
						Voltage	0 to 10V	±0.3% (±12 digits)	±0.4% (±16 digits)	±0.1% (±4 digits)	±0.3% (±36 digits)	±0.4% (±48 digits)	±0.1% (±16 digits)
							-10 to 10V						
							0 to 5V						
	1 to 5V												
	User range setting												
	Current	0 to 20mA	±0.3% (±12 digits)	±0.4% (±16 digits)	±0.1% (±4 digits)	±0.3% (±36 digits)	±0.4% (±48 digits)	±0.1% (±12 digits)					
		4 to 20mA											
		User range setting											
Maximum conversion speed		1ms/channel			80μs/channel (Add 160μs regardless of the number of channels used when temperature drift correction is used.)								
Absolute maximum input	Voltage	±15V			±15V								
	Current	±30mA			±30mA								
No. of analog input points		60 channels/module			8 channels/module								
Isolation method	Between input terminal and programmable controller power supply	Photocoupler isolation			Photocoupler isolation								
	Between channels	Non-isolated			Non-isolated								
No. of occupied points		32 points			16 points								
Connected terminal block		38-point terminal block			18-point terminal block								
Current consumption		1A			0.64A								

•Program precautions

- With A616AD and Q68ADV/Q68ADI, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- Q68ADV/Q68ADI has a faster conversion speed than A616AD. As a result, the possibility exists that noise not introduced in A616AD will be introduced as analog signals in Q68ADV/Q68ADI. In such a case, use an averaging processing function to remove the impact of the noise.

3) ERNT-AQT616DA Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-A series module model	No. of channels	MELSEC-Q series module model	No. of required modules
ERNT-AQT616DA	A616DAV	16 channels	Q68DAVN	2 modules
	A616DAI		Q68DAIN	

Notes

- Change the external power supply connected to terminal numbers TB36 and TB37 on the MELSEC-A series side to 24VDC.
- The -15 V connected to terminal number TB38 on the MELSEC-A series side is not required.
- Q68DAVN/Q68DAIN does not have an offset/gain setting terminal. For offset/gain setting, refer to the Q68DAVN/Q68DAIN user's manual.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Reference to "L (NA) 08046ENG Transition from MELSEC-A/QnA (Large Type) Series to Q Series Handbook" published by Mitsubishi Electric is recommended. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

[Specification comparison chart]

Model	MELSEC-A series	MELSEC-Q series
Specification	A616DAV	Q68DAVN
Digital input	16-bit signed binary (-4096 to 4095)	16-bit signed binary (Normal resolution mode: -4096 to 4095, High resolution mode: -12288 to 12287, -16384 to 16383)
Analog output	When the output voltage setting is 10V -10 to 0 to 10VDC (External load resistance value: 2kΩ to 1MΩ) When the output voltage setting is 5V -5 to 0 to 5V (External load resistance value: 2kΩ to 1MΩ)	-10 to 10VDC (External load resistance value: 1KΩ to 1MΩ)
I/O characteristics	Digital input	Analog output range
	When set to 5V	When set to 10V
	4000	5V
	2000	2.5V
Maximum resolution	1/4000	0.75mV
Overall accuracy	Output voltage range setting	At an ambient temperature of 25±5°C, within ±0.1% (Voltage: ±10mV) At an ambient temperature of 0 to 55°C, within ±0.3% (Voltage: ±30mV)
Maximum conversion speed	0.5ms (-10V → 10V / 10V → -10V conversion time)	80μs/channel
Absolute maximum output Voltage	15V	±12V
No. of analog output points	16 channels/module	8 channels/module

For High-Speed Counter Modules

1-slot type (Applicable to Mitsubishi Electric Q series large type base units as well)

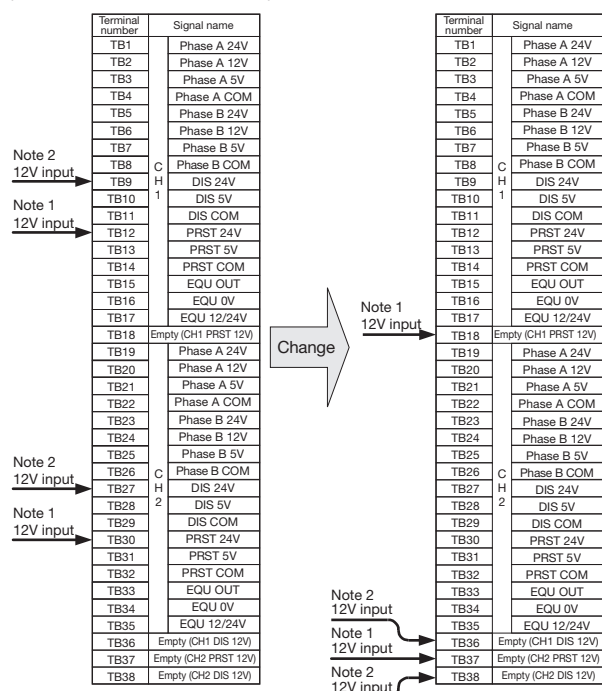

1) ERNT-AQTD61 Terminal block (38P)→Connector (40P)

Conversion adapter model	MELSEC-A series module model	No. of channels	MELSEC-Q series module model	No. of required modules
ERNT-AQTD61	AD61	2 channels	QD62-H01	1 module
	AD61-S1		QD62-H02	

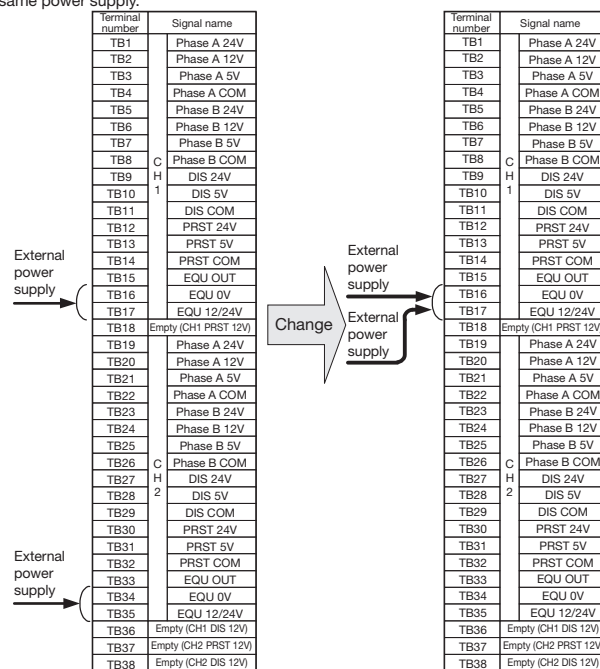

Notes

- PRST 12/24V (terminal numbers TB12 and TB30) on the MELSEC-A series side are connected to PRST 24V of QD62-H01/H02. In a case where the preset input is used at 12V, usage is possible by connecting the wiring of PRST 12/24V (terminal numbers TB12 and TB30) to terminal numbers TB18 and TB37. (Refer to the figure below.) Further, the external input specifications differ. External device specifications need to be verified.
- DIS 12/24V (terminal numbers TB9 and TB27) on the MELSEC-A series side are connected to FUNC 24V of QD62-H01/H02. In a case where the disable input is used at 12V, usage is possible by connecting the wiring of DIS 12/24V (terminal numbers TB9 and TB27) to terminal numbers TB36 and TB38. (Refer to the figure below.) Further, the external input specifications differ. External device specifications need to be verified.

- Use the CH1-side (terminal numbers TB17 and TB16) only for the external power supply for AD61 coincidence output. When the CH2-side external power supply (terminal numbers TB35 and TB34) is used, the wiring needs to be changed. (Refer to the figure below.) Further, in a case where the CH1-side external power supply (terminal numbers TB17 and TB16) and the CH2-side external power supply (terminal numbers TB35 and TB34) are used as separate power supplies, the power supplies need to be changed to the same power supply.

- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Reference to "L (NA) 08046ENG Transition from MELSEC-A/QnA (Large Type) Series to Q Series Handbook" published by Mitsubishi Electric is recommended. Note that the areas where the specifications differ between the MELSEC-A series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

[Input module specification comparison chart]

ERNT-AQB52	A52B	Q52B	ERNT-AQF3

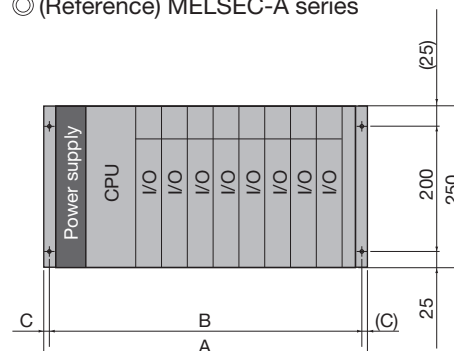

Mounting Dimensions

- The base adapter longitudinal dimension is smaller than that of the MELSEC-A series.
(For module width and depth dimensions, refer to the “Usage Precautions” on page 1-30.)
- The base adapter mounting holes (four) share the same dimensions as those for the MELSEC-A series base unit. There is no need to drill additional holes on the control panel.
- When replacing the MELSEC-A series with the MELSEC-Q series, the slot positions where the module is mounted are different. Adjust the wiring length prior to use.

◎ MELSEC-Q series

◎ (Reference) MELSEC-A series

Unit: mm

When Not Using a Base Adapter

When a base adapter is not used, screw holes (M4 × 2) need to be provided to mount the conversion adapter support flange as shown below. The conversion adapter support flange must be mounted.

When using a main base unit

◎With Q312B, Q38B, Q35B, and Q33B

Unit: mm

Conversion adapter support flange	A
ERNT-AQF12	321.2
ERNT-AQF8	210
ERNT-AQF5	126.6
ERNT-AQF3	71

Provide screw holes (M4 × 2) to these locations and mount the conversion adapter support flange here.

When using an extension base unit

◎With Q612B, Q68B, Q65B, and Q63B

Unit: mm

Conversion adapter support flange	A
ERNT-AQF12	321.2
ERNT-AQF8	210
ERNT-AQF5	126.6
ERNT-AQF3	71

Provide screw holes (M4 × 2) to these locations and mount the conversion adapter support flange here.

◎With Q55B

Unit: mm

Provide screw holes (M4 × 2) to these locations and mount the conversion adapter support flange here.

◎With Q52B

Unit: mm

Provide screw holes (M4 × 2) to these locations and mount the conversion adapter support flange here.

Conversion Adapter Support Flange

Specifications

The conversion adapter support flange secures the bottom of the conversion adapter and is thus required during conversion adapter use. One support flange is required per base unit.

Conversion adapter support flange model	Specifications
ERNT-AQF12	Conversion adapter support flange for 12-slot MELSEC-Q series modules
ERNT-AQF8	Conversion adapter support flange for 8-slot MELSEC-Q series modules
ERNT-AQF5	Conversion adapter support flange for 5-slot MELSEC-Q series modules
ERNT-AQF3	Conversion adapter support flange for 3-slot MELSEC-Q series modules

Usage Precautions

The conversion adapter is used to compensate the difference of the pin assignment when the MELSEC-A series large type module is replaced with the MELSEC-Q series module.

When replacing MELSEC-A series with MELSEC-Q series, be sure to refer to the manual of each module of the MELSEC-Q series to verify the differences in performance, function, CPU input/output signals, buffer memory addresses, and the like prior to use.

We also recommend that you refer to the “Transition from MELSEC-A/QnA (Large Type) Series to Q Series Handbook” published by Mitsubishi Electric.

Module Width

- 1) The module width dimension is smaller (37.5 mm → 27.4 mm) and the wiring area is smaller, requiring verification during mounting.

- 2) If the wiring interferes with a mounted module, lift the wiring forward, etc., so that there is no interference.

- 3) If interference still occurs even when you lift the wiring, open up a slot to secure a space for wiring.

Example) Q312B

Mount a connector cover (accessory) or blank cover module (QG60) to prevent dust from entering the connector of a sparespace where a module is not mounted.

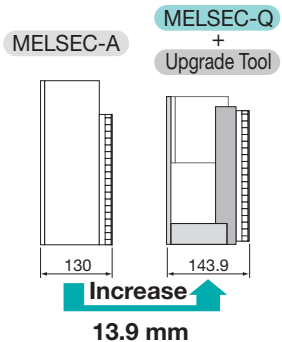

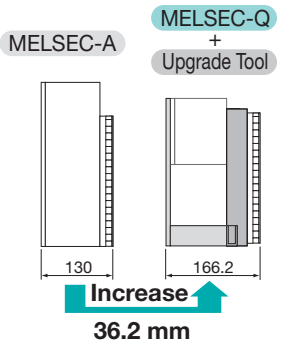

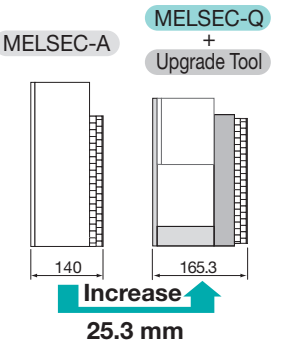

- 4) If replacement is not possible based on 2) or 3) on the left, investigate using the Mitsubishi Electric Q series large type base unit. ➡ 1-2

Depth

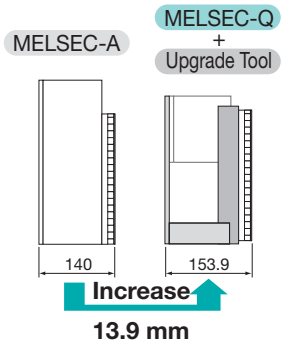

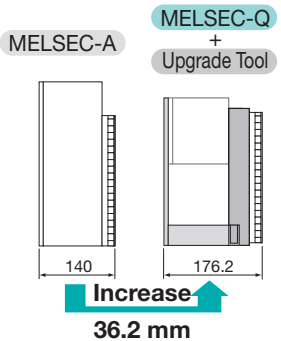

The depth is larger, requiring verification during mounting.

MELSEC-A :MELSEC-A series

MELSEC-Q :MELSEC-Q series

Conversion Adapter Support Flange / Base Adapter

When using a conversion adapter, the conversion adapter support flange is required. We recommend use of a base adapter that permits MELSEC-Q series installation using the mounting holes of the MELSEC-A series (additional drilling of holes is not required).

Slot Positions

When you replace the MELSEC-A series with the MELSEC-Q series, the slot positions are different. Change the slot positions where modules are mounted and adjust the wiring lengths prior to use.

1) A38B(-UL/-E)/A38HB(EU)→Q312B, Q38B

3) A32B(-UL/-E)→Q33B

2) A35B(-UL/-E)→Q38B, Q35B

Memo

[illegible]

Upgrading from the MELSEC-AnS series to the MELSEC-L series

■ Simplifies replacement with the MELSEC-L series

The upgrade tool makes it easy to replace the Mitsubishi Electric programmable controller MELSEC-AnS series with the MELSEC-L series.

■ Significantly shortens the time required for input, output, analog and high-speed counter module wiring, and significantly reduces wiring errors

• The upgrade tool allows you to connect the wiring connected to the MELSEC-AnS series input, output, analog and high-speed counter modules as is to the MELSEC-L series using a conversion adapter. (Partial changes to power supply and common terminal connections required.)

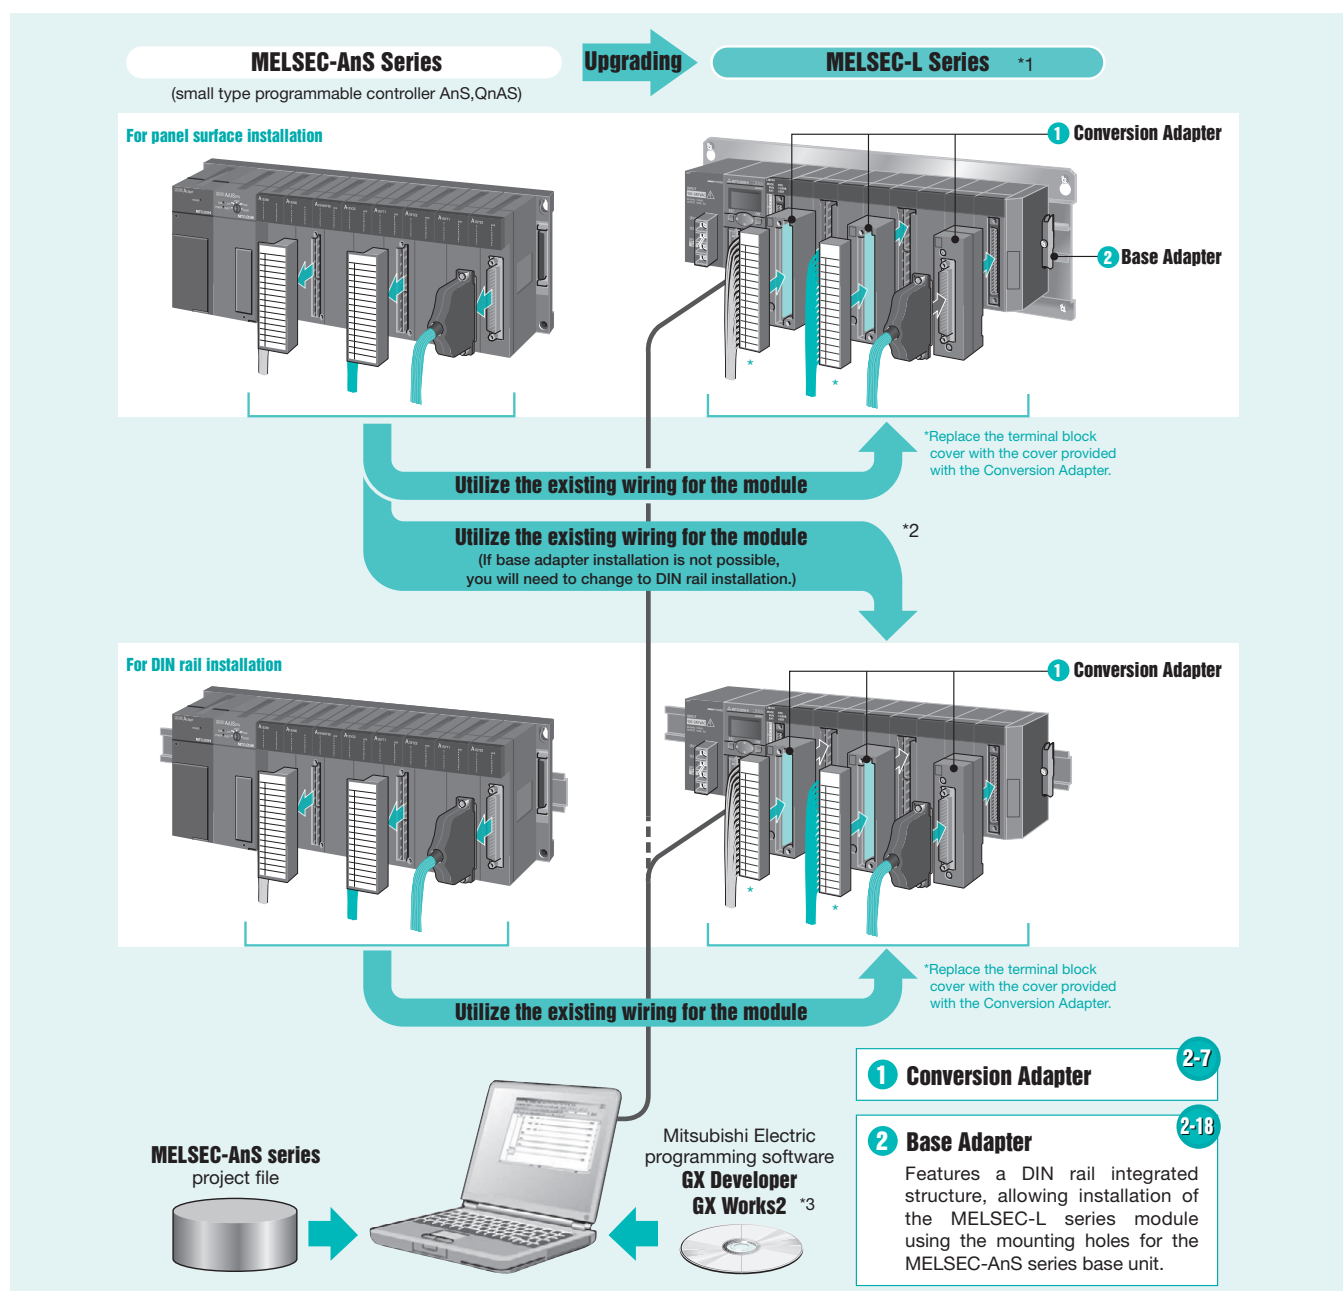

• By using a base adapter, the MELSEC-L series can be installed using the MELSEC-AnS series mounting holes. (Additional drilling of holes is not required.) Compatible with DIN rail installation as well.

■ Permits reuse of sequence programs

The upgrade tool allows you to change from the MELSEC-AnS series to the MELSEC-L series and reuse programs by changing the PLC type in the Mitsubishi Electric programming software GX Developer (GX Works2 required for certain CPU types).

Product Overview

The MELSEC-AnS series / MELSEC-L series upgrade tool comprises a “conversion adapter” that changes the existing wiring connected to the Mitsubishi Electric programmable controller MELSEC-AnS series modules to wiring applicable to the modules of the MELSEC-L series, and a “base adapter” that makes it possible to install the MELSEC-L series using the mounting holes of the MELSEC-AnS series base unit.

*1: When replacing the MELSEC-AnS series with the MELSEC-L series, verification of the mounting is required due to the change in module width and depth dimensions. For details, refer to the "Usage Precautions" (page 2-19) in this catalog.

*2: If the MELSEC-L series system does not fit in the base adapter horizontal width dimension after replacement. Verify the installation method following "Selecting the installation method during replacement" (page 2-3).

*3: Programs can be reused when changing from the MELSEC-AnS series (existing program) to the MELSEC-L series by changing the PLC type in the Mitsubishi Electric programming software GX Developer. Note that changing to a type other than L02CPU (-P) and L26CPU (-P) BT requires changing the PLC type in GX Works2 after changing the PLC type in GX Developer. For details, refer to the GX Developer and GX Works2 Operating Manuals. Tools that support program replacement with the L series are also provided by Mitsubishi Electric.

If you replace a terminal block type module, the wiring may interfere with an adjacent module. Use of the Mitsubishi Electric LG69 space module is recommended.

MITSUBISHI ELECTRIC CORPORATION

LG69 space module

Ensures wiring space, making it possible to alleviate wiring interface with adjacent modules.

MELSEC-AnS series /MELSEC-L series

conversion adapter)

A wired terminal block
removed from existing
AnS series module

MELSEC-AnS series /MELSEC-L series
upgrade tool
conversion adapter

Note

- If you use the LG69 space module, the number of modules mounted is restricted. For details, see the "MELSEC-L CPU Module User's Manual (Hardware Design & Maintenance Inspection)" published by Mitsubishi Electric.
- Depending on the system configuration, the width dimension may increase, making it no longer possible to use the base adapter. Verify the installation method by following "Selecting the Installation Method During Replacement" on the following page.

Selecting the Installation Method During Replacement

The MELSEC-L series features a structure that connects the modules together without a base. As a result, you need to calculate the width dimension of the system after replacement, taking into consideration the width dimension tolerance of each module. The installation method (base adapter or DIN rail) is then determined by the calculation result of the width dimension.

◎ Calculating the width dimension of the system after replacement

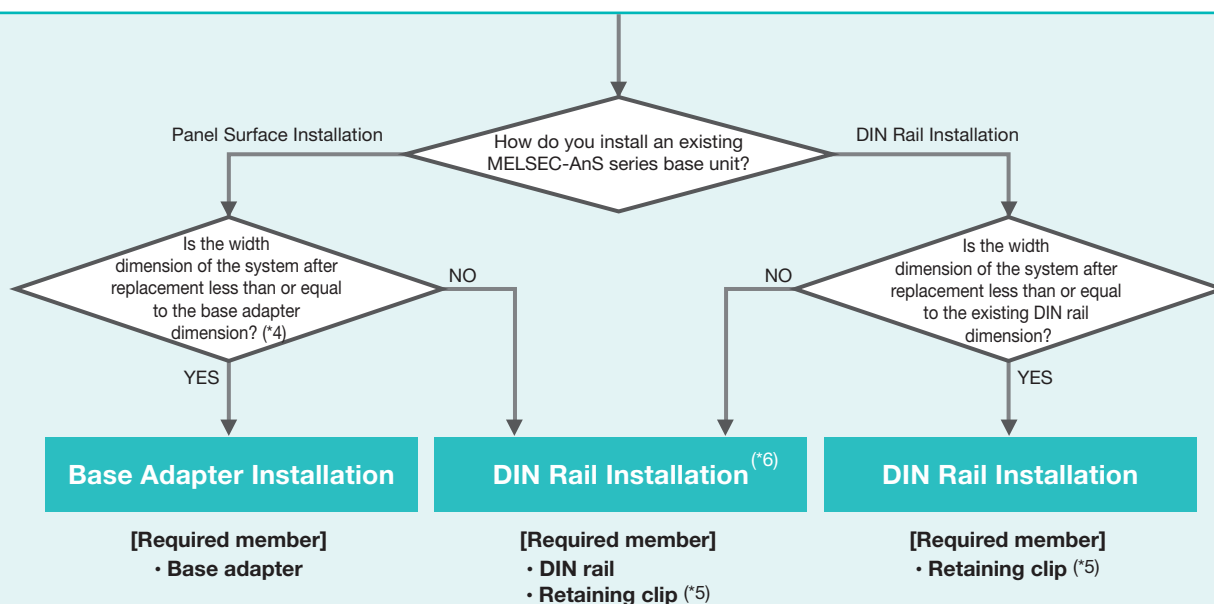

Calculate the width dimension of the system using the following formula.

$$\text{L series module width dimension total}^{(*1)} + \text{L series module width dimension tolerance total}^{(*2)} + \text{Retaining clip width dimension}^{(*3)}$$

Automatic calculation of width dimension

The "Upgrade Device Selection Tool" provided by the Web information service MEEFAN automatically calculates the width dimension when you simply select the model.

*1: Dimension stated in the L series module manual

*2: Dimension tolerance (value per module) for L series module width dimension

L series module width dimension	Dimension tolerance
28.5 mm or less	+0.5 mm (per module)
Greater than 28.5 mm	+1.0 mm (per module)

*3: Width dimension of the retaining clip used (9mm per clip and 18 mm per two clips if using the retaining clip that comes with the base adapter)

*4: For the width dimension of each base adapter, see dimension A of the External Drawing (page 2-24).

Example) 430 mm for **ERNT-ASLB38**.

*5: Use a retaining clip (user provided clip) that can be mounted to the DIN rail.

*6: If the system after replacement does not fit in the installation space (width), consider the way of connection to divide some parts of the system into extension blocks.

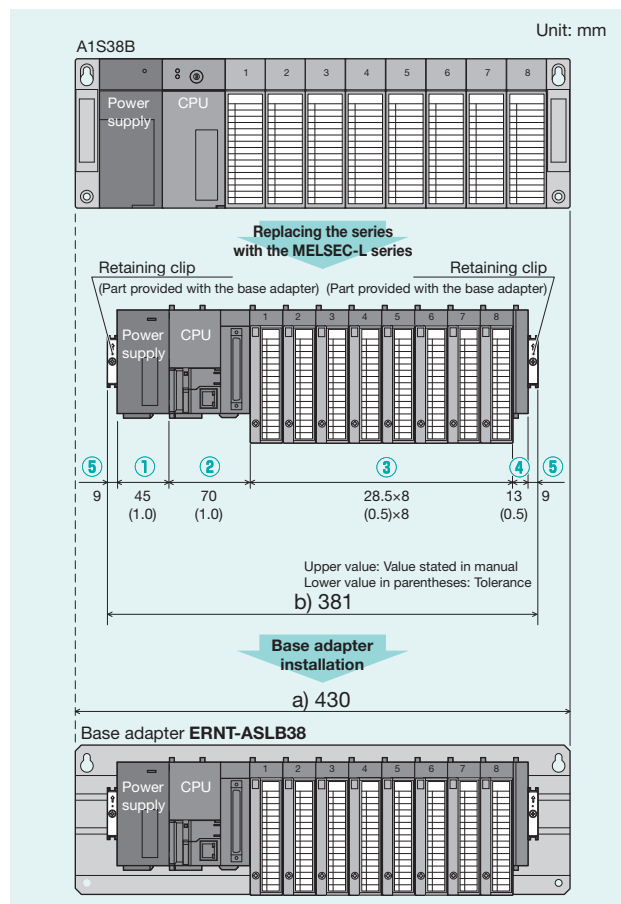

Example) If replacing A1S38B comprising eight mounted input/output modules

◎ If executing replacement without using a space module

- a) Base adapter ERNT-ASLB38 width dimension: 430 mm
- b) Width dimension after replacement
- ① Power supply module : 45 mm (dimension tolerance + 1.0 mm)
 - ② CPU module : 70 mm (dimension tolerance + 1.0 mm)
 - ③ Input/Output module : 28.5 mm (dimension tolerance + 0.5 mm) × 8 modules
 - ④ End cover : 13 mm (dimension tolerance + 0.5 mm)
 - ⑤ Retaining clip : 9 mm × 2 clips
- $$(45 + 70 + 28.5 \times 8 + 13) + (1.0 + 1.0 + 0.5 \times 8 + 0.5) + (9 \times 2)$$
- L series module width dimension total
L series module width dimension tolerance total
Retaining clip width dimension
- $$= 356 + 6.5 + 18$$
- $$= 380.5 \text{ mm} \approx \text{Max. } 381 \text{ mm}$$

a) 430 mm ≥ b) 381 mm

The total width does not exceed the base adapter ERNT-ASLB38 dimension (430 mm). Base adapter installation is available.

◎ If executing replacement using a space module

- a) Base adapter ERNT-ASLB38 width dimension: 430 mm
- b) Width dimension after replacement
- ① Power supply module : 45 mm (dimension tolerance + 1.0 mm)
 - ② CPU module : 70 mm (dimension tolerance + 1.0 mm)
 - ③ Space module : 16.5 mm (dimension tolerance + 0.5 mm) × 8 modules
 - ④ Input/Output module : 28.5 mm (dimension tolerance + 0.5 mm) × 8 modules
 - ⑤ End cover : 13 mm (dimension tolerance + 0.5 mm)
 - ⑥ Retaining clip : 9 mm × 2 clips
- $$(45 + 70 + 16.5 \times 8 + 28.5 \times 8 + 13) + (1.0 + 1.0 + 0.5 \times 8 + 0.5 \times 8 + 0.5) + (9 \times 2)$$
- L series module width dimension total
L series module width dimension tolerance total
Retaining clip width dimension
- $$= 488 + 10.5 + 18$$
- $$= 516.5 \text{ mm} \approx \text{Max. } 517 \text{ mm}$$

a) 430 mm < b) 517 mm

The total width exceeds the base adapter ERNT-ASLB38 dimension (430 mm). DIN rail installation is required.

*: Use a retaining clip (user provided clip) that can be mounted on the DIN rail.

Model List

1 Conversion Adapter

When selecting a conversion adapter, be sure to refer to the module specification comparison charts and notes on pages 2-7 to 2-13. These pages indicate precautions such as differences in the number of points per common. For detailed specifications and general specifications not stated in the module specification comparison charts, refer to the user's manual of the corresponding module. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

For Input/Output Modules [1-module type]

Input / Output	MELSEC-AnS series module model before replacement	MELSEC-L series module model after replacement	Conversion adapter			Page				
			Model	Shape			No. of input/output points			
MELSEC-AnS series	MELSEC-L series									
Input	A1SX10	LX10	ERNT-ASLTXY10	Terminal block (20 points)	Terminal block (18 points)	16 points	2-7			
	A1SX10EU									
Output	A1SY10									
	A1SY10EU									
Input	A1SX40	LX40C6	ERNT-ASLTX40							
	A1SX40-S1									
	A1SX40-S2	LX40C6	ERNT-ASLTX80							
	A1SX80									
	A1SX80-S1									
	A1SX80-S2									
Output	A1SY22	LY20S6	ERNT-ASLTY22				D-sub connector (37P)	Connector (40P)	32 points	2-9
	A1SY40	LY40NT5P	ERNT-ASLTY40							2-9
	A1SY40P	LY40NT5P	ERNT-ASLTY50	2-10						
	A1SY50		ERNT-ASLTY80	2-10						
	A1SY80									
Input	A1SX81	LX41C4	ERNT-ASLCXY81	D-sub connector (37P)	Connector (40P)	32 points	2-11			
	A1SX81-S2									
Output	A1SY81	LY41PT1P								
	A1SY81EP									

Note 1. The input/output in the table below are not conversion adapter compatible and therefore require rewiring. Be sure to verify that the MELSEC-L series module specifications satisfy the specifications of connected devices and equipment.

Input/Output	MELSEC-AnS series module model before replacement		MELSEC-L series module model after replacement		
	Model	No. of points	Model	No. of points	No. of required modules
Input	A1SX20	16 points	LX28	8points	2 modules
	A1SX20EU	16 points	LX40C6 (24VDC)	16 points	1 module
	A1SX30	16 points	LY10R2	16 points	1 module
Output	A1SY14EU	12 points	LX40C6 + LY10R2	16 points + 16 points	1 module + 1 module
	A1SY48Y18	Input 8 points + Output 8 points	LX40C6 + LY40NT5P	16 points + 16 points	1 module + 1 module
Combined input/output	A1SX48Y58	Input 8 points + Output 8 points	LY18R2A	8points	1 module
	A1SY18A	8 points	LY28S1A	8points	1 module
Output	A1SY18AEU	8 points	There is no applicable MELSEC-L series module.		
	A1SY28A	8 points			
Output	A1SY28EU	8 points			
	A1SY60	16 points			
	A1SY60E	8 points			
Dynamic input	A1SY68A	32 points			
	A1SY71	16/32/48/64 points			
Dynamic output	A1S42X	16/32/48/64 points			
	A1S42Y	16/32/48/64 points			

Note 2. The input/output modules in the table below can use the existing wiring as is. Be sure to verify that the MELSEC-L series module specifications satisfy the specifications of connected devices and equipment.

Input/Output	MELSEC-AnS series module model before replacement	MELSEC-L series module model after replacement	Input/Output	MELSEC-AnS series module model before replacement	MELSEC-L series module model after replacement
Input	A1SX41	LX41C4 (24VDC)	Combined input/output	A1SH42	LH42C4NT1P (24VDC)
	A1SX41-S1	LX41C4		A1SH42P	
	A1SX41-S2			A1SH42-S1	LH42C4NT1P
	A1SX42	LX42C4 (24VDC)		A1SH42P-S1	
	A1SX42-S1	LX42C4			
	A1SX42-S2				
	A1SX71	LX41C4 (24VDC)			
	A1SX82-S1	LX42C4			
Output	A1SY41	LY41NT1P			
	A1SY41P	LY42NT1P			
	A1SY42				
	A1SY42P				
	A1SY82	LY42PT1P			

For Analog Modules

[1-module type]

Input/ Output	MELSEC-AnS series module model before replacement	MELSEC-L series module model after replacement	Conversion adapter				Page
			Model	Shape		No. of channels	
				MELSEC-AnS series	MELSEC-L series		
Input	A1S64AD	L60AD4	ERNT-ASLT64AD	Terminal block (20 points)	Terminal block (18 points)	4 channels	2-12
Output	A1S62DA	L60DA4	ERNT-ASLT62DA			2 channels	2-13

Note 3. Modules other than the intelligent function modules above are not compatible with the conversion adapter. Rewiring is required.

For High-Speed Counter Modules

[1-module type]

MELSEC-AnS series module model before replacement	MELSEC-L series module model after replacement	Conversion adapter				Page
		Model	Shape		No. of channels	
			MELSEC-AnS series	MELSEC-L series		
A1SD61	LD62	ERNT-ASLTD61	Terminal block (20 points)	Connector (40P)	1 channel	2-14
A1SD62	LD62	ERNT-ASLTD62			2 channels	2-16

2 Base Adapter

With the base adapter, the MELSEC-Q series base unit can be installed using the mounting holes of the MELSEC-L series base unit.
The base adapter width dimension is the same as that of the MELSEC-AnS series base unit prior to replacement. As a result, the following precautions apply even if you do not use a space module (LG69).

Main/ Extension	MELSEC-AnS series module model before replacement	Base adapter model	Replacement precautions	Page
Main	A1S38B	ERNT-ASLB38	—	2-18
	A1S38HB		—	
	A1S35B	ERNT-ASLB35	—	
	A1S33B	ERNT-ASLB33	If extension blocks are connected, the number of modules that can be mounted is two (*1).	
	A1S32B	ERNT-ASLB32	If extension blocks are connected, the number of modules that can be mounted is one (*1).	
	A1SJCPU	ERNT-ASLBJ	—	
	A1SJCPU-S3		—	
	A1SJHCPU		—	
Extension	A1S68B	ERNT-ASLB68	—	2-18
	A1S65B	ERNT-ASLB65	—	
	A1S58B	ERNT-ASLB58	—	
	A1S55B	ERNT-ASLB55	—	
	A1S52B	ERNT-ASLB52	The number of modules that can be mounted is one (*1).	

*1: Module with a width dimension of 28.5mm.

Conversion Adapter

Specifications

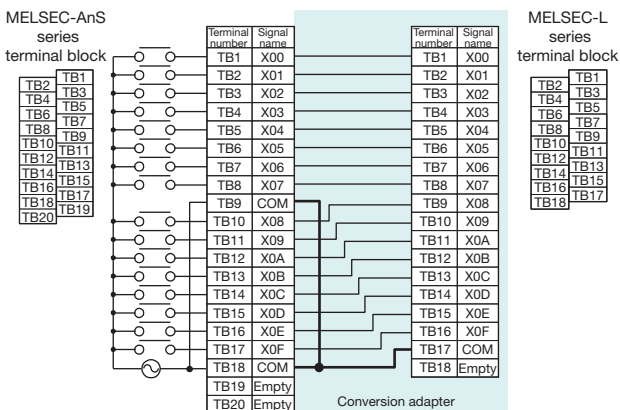

For Input/Output Modules

1-module type

1) ERNT-ASLTX10 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of input/output points	MELSEC-L series module model
ERNT-ASLTX10	A1SX10	16 points	LX10
	A1SX10EU		
	A1SY10	16 points	LY10R2
	A1SY10EU		

With A1SX10/A1SX10EU→LX10

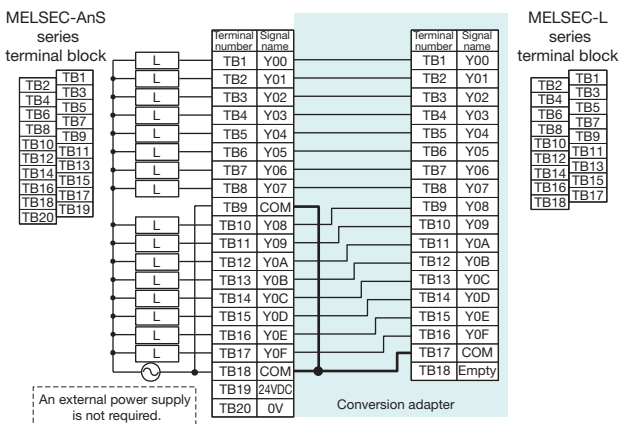

[Specification comparison chart]

Specification	MELSEC-AnS series		MELSEC-L series
	A1SX10	A1SX10EU	LX10
No. of input points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	100 to 120VAC, 50/60Hz	100 to 120VAC, 50/60Hz	100 to 120VAC (+10/-15%) 50/60Hz (±3Hz)
Rated input current	Approx. 6mA (100VAC, 60Hz)	Approx. 7mA (120VAC, 60Hz)	8.2mA (100VAC, 60Hz) 6.8mA (100VAC, 50Hz)
Rush current	200mA, maximum, within 1ms (132VAC)	200mA, maximum, within 1ms (132VAC)	200mA, maximum, within 1ms
ON voltage / ON current	80VAC or more / 5mA or more	80VAC or more / 5mA or more	80VAC or more / 5mA or more (50Hz, 60Hz)
OFF voltage / OFF current	30VAC or less / 1.4mA or less	30VAC or less / 1.4mA or less	30VAC or less / 1.7mA or less (50Hz, 60Hz)
Input impedance	Approx. 18kΩ (60Hz) Approx. 21kΩ (50Hz)	Approx. 18kΩ (60Hz) Approx. 21kΩ (50Hz)	12.2kΩ (60Hz) 14.6kΩ (50Hz)
Response time	OFF→ON: 20ms or less ON→OFF: 35ms or less	20ms or less 35ms or less	15ms or less 20ms or less
Internal current consumption	50mA (TYP. all points ON)	50mA (TYP. all points ON)	90mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the module specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

With A1SY10/A1SY10EU→LY10R2

[Specification comparison chart]

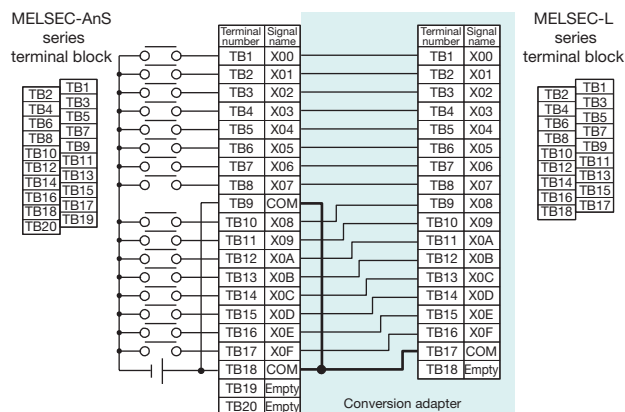

Specification	MELSEC-AnS series		MELSEC-L series
	A1SY10	A1SY10EU	LY10R2
No. of output points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Relay isolation
Rated switching voltage/current	240VAC/2A (cosφ=1) 24VDC/2A (Resistance load) 8A/common	120VAC/2A (cosφ=1) 24VDC/2A (Resistance load) 8A/common	240VAC/2A (cosφ=1) 24VDC/2A (Resistance load) 8A/common
Minimum switching load	5VDC, 1mA	5VDC, 1mA	5VDC, 1mA
Maximum switching voltage	264VAC, 125VDC	132VAC, 125VDC	264VAC, 125VDC
Response time	OFF→ON: 10ms or less ON→OFF: 12ms or less	10ms or less 12ms or less	10ms or less 12ms or less
Surge suppressor	No	No	No
Fuse	No	No	No
Internal current consumption	120mA (TYP. all points ON)	120mA (TYP. all points ON)	460mA (TYP. all points ON)
Wiring method for common	8 points/common	8 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB18 on the MELSEC-AnS series side are used separately, a wiring change is required.
- An external power supply connected to terminal numbers TB19 and TB20 on the MELSEC-AnS series side is not required.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

2) ERNT-ASLTX40 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of input points	MELSEC-L series module model
ERNT-ASLTX40	A1SX40	16 points	LX40C6
	A1SX40-S1		
	A1SX40-S2		

[Specification comparison chart]

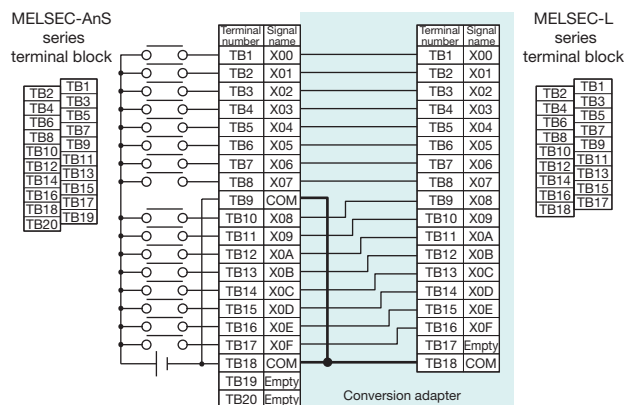

Specification	MELSEC-AnS series			MELSEC-L series
	A1SX40 (Sink type)	A1SX40-S1 (Sink type)	A1SX40-S2 (Sink type)	LX40C6 (Positive/Negative common shared type)
No. of input points	16 points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	12/24VDC	24VDC	24VDC	24VDC
Rated input current	Approx. 3mA / Approx. 7mA	Approx. 7mA	Approx. 7mA	6mA TYP.
ON voltage / ON current	8VDC or more / 2mA or more	14VDC or more / 4mA or more	14VDC or more / 3.5mA or more	15VDC or more / 4mA or more
OFF voltage / OFF current	4VDC or less / 1mA or less	6.5VDC or less / 1.7mA or less	6.5VDC or less / 1.7mA or less	8VDC or less / 2mA or less
Input impedance	Approx. 3.3kΩ	Approx. 3.3kΩ	Approx. 3.3kΩ	3.8kΩ
Response time	OFF→ON: 10ms or less ON→OFF: 10ms or less	0.1ms or less / 0.2ms or less	10ms or less / 10ms or less	1/5/10/20/70ms or less / 1/5/10/20/70ms or less
Internal current consumption	50mA (TYP. all points ON)	50mA (TYP. all points ON)	50mA (TYP. all points ON)	90mA (TYP. all points ON)

External interface	20-point terminal block	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- When replacing A1SX40 and using a rated input voltage of 12VDC, the voltage needs to be changed to 24VDC.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

3) ERNT-ASLTX80 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of input points	MELSEC-L series module model
ERNT-ASLTX80	A1SX80	16 points	LX40C6
	A1SX80-S1		
	A1SX80-S2		

[Specification comparison chart]

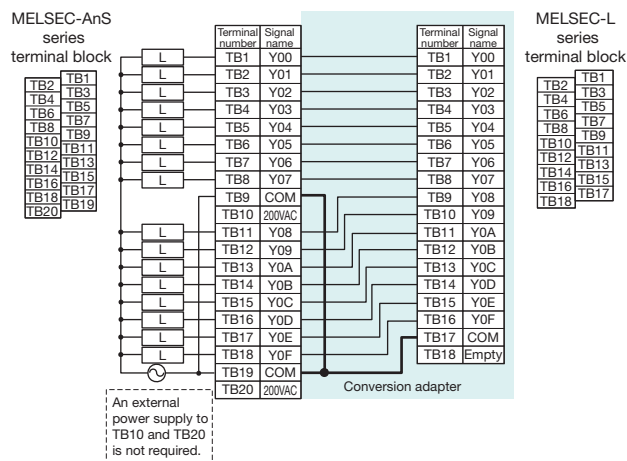

Specification	MELSEC-AnS series			MELSEC-L series
	A1SX80 (Sink/Source type)	A1SX80-S1 (Sink/Source type)	A1SX80-S2 (Sink/Source type)	LX40C6 (Positive/Negative common shared type)
No. of input points	16 points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	12/24VDC	24VDC	24VDC	24VDC
Rated input current	Approx. 3mA / Approx. 7mA	Approx. 7mA	Approx. 7mA	6mA TYP.
ON voltage / ON current	8VDC or more / 2mA or more	17VDC or more / 5mA or more	13VDC or more / 3.5mA or more	15VDC or more / 4mA or more
OFF voltage / OFF current	4VDC or less / 1mA or less	5VDC or less / 1.7mA or less	6VDC or less / 1.7mA or less	8VDC or less / 2mA or less
Input impedance	Approx. 3.3kΩ	Approx. 3.3kΩ	Approx. 3.3kΩ	3.8kΩ
Response time	OFF→ON: 10ms or less ON→OFF: 10ms or less	0.4ms or less / 0.5ms or less	10ms or less / 10ms or less	1/5/10/20/70ms or less / 1/5/10/20/70ms or less
Internal current consumption	50mA (TYP. all points ON)	50mA (TYP. all points ON)	50mA (TYP. all points ON)	90mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common	16 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- When replacing A1SX80 and using a rated input voltage of 12VDC, the voltage needs to be changed to 24VDC.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

4) ERNT-ASLTY22 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-L series module model
ERNT-ASLTY22	A1SY22	16 points	LY20S6

[Specification comparison chart]

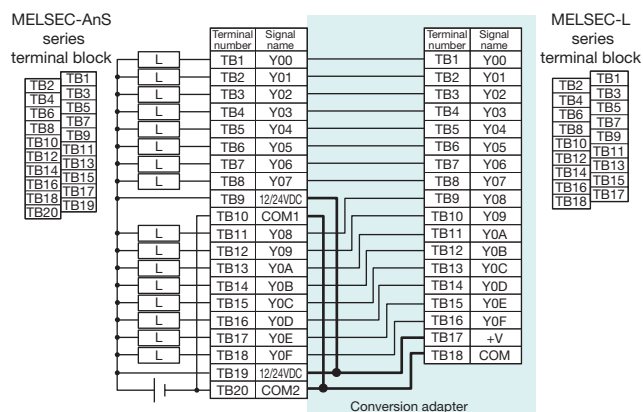

Model	MELSEC-AnS series	MELSEC-L series
Specification	A1SY22	LY20S6
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	100 to 240VAC 50/60Hz±3Hz	100 to 240VAC (+10/-15%) 50/60Hz (±3Hz)
Maximum load current	0.6A/point 2.4A/common	0.6A/point 4.8A/common
Minimum load voltage/current	24VAC 100mA 100VAC 10mA 240VAC 20mA	24VAC 100mA 100VAC 25mA 240VAC 25mA
Maximum rush current	20A 10ms or less, 8A 100ms or less	20A, one cycle or less
OFF leakage current	1.5mA (120VAC, 60Hz) 3mA (240VAC, 60Hz)	1.5mA (at 120VAC, 60Hz) 3mA or less (at 240VAC, 60Hz)
ON maximum voltage drop	1.5VAC or less (0.1 to 0.6A) 1.8VAC or less (50 to 100mA) 2VAC or less (10 to 50mA)	1.5V or less (Load current at 0.6A)
Response time	OFF→ON: 1ms or less ON→OFF: 1ms + 0.5 cycles or less	1ms or less + 0.5 cycles or less 1ms + 0.5 cycles or less (Rated load, resistance load)
Surge suppressor	CR absorber	CR absorber
Fuse	5A (1 common/fuse) not replaceable	No (Fuse installation is recommended for each external wiring point.)
Internal current consumption	270mA (TYP. all points ON)	300mA (TYP. all points ON)
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 on the MELSEC-AnS series side are used separately, a wiring change is required.
- An external power supply connected to terminal numbers TB10 and TB20 on the MELSEC-AnS series side is not required.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

5) ERNT-ASLTY40 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-L series module model
ERNT-ASLTY40	A1SY40	16 points	LY40NT5P
	A1SY40P		

[Specification comparison chart]

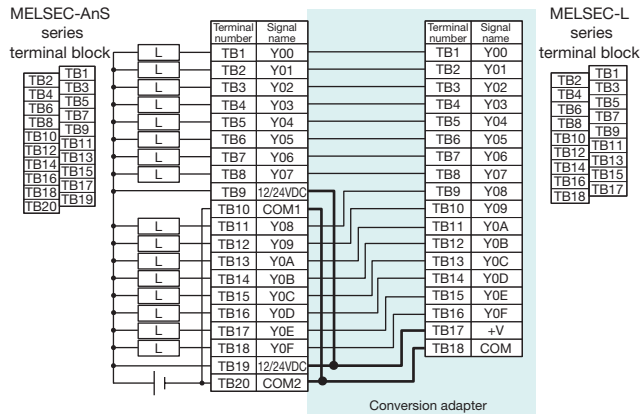

Model	MELSEC-AnS series		MELSEC-L series
	A1SY40	A1SY40P	LY40NT5P
Specification	(Sink type)	(Sink type)	(Sink type)
No. of output points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12/24VDC	12/24VDC
Maximum load current	0.1A/point 0.8A/common	0.1A/point 0.8A/common	0.5A/point 5A/common
Maximum rush current	0.4A, 10ms or less	0.7A, 10ms or less	Current restrictions exist due to the overload protection function
OFF leakage current	0.1mA or less	0.1mA or less	0.1mA or less
ON maximum voltage drop	1.0VDC (TYP) 0.1A 2.5VDC (MAX) 0.1A	0.1VDC (TYP) 0.1A 0.2VDC (MAX) 0.1A	0.2VDC (TYP) 0.5A 0.3VDC (MAX) 0.5A
Response time	OFF→ON: 2ms or less ON→OFF: 2ms or less (Resistance load)	1ms or less 1ms or less (Rated load, resistance load)	0.5ms or less 1ms or less (Rated load, resistance load)
Surge suppressor	Zener diode	Zener diode	Zener diode
Fuse	1.6 A (1 common/fuse) not replaceable	No	No
Internal current consumption	270mA (TYP. all points ON)	79mA (TYP. all points ON)	100mA (TYP. all points ON)
Protection function	No	Yes (Overheat protection and overload protection)	Yes (Overheat protection and overload protection)
Wiring method for common	8 points/common	8 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-AnS series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

6) ERNT-ASLTY50 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-L series module model
ERNT-ASLTY50	A1SY50	16 points	LY40NT5P

[Specification comparison chart]

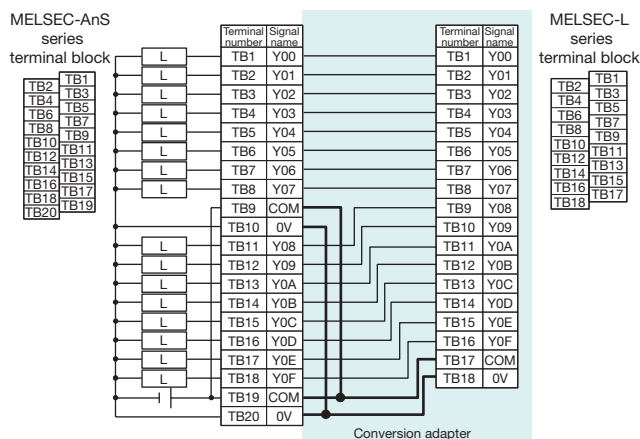

Model	MELSEC-AnS series A1SY50 (Sink type)	MELSEC-L series LY40NT5P (Sink type)
Specification		
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12/24VDC
Maximum load current	0.5A/point 2A/common	0.5A/point 5A/common
Maximum rush current	4A, 10ms or less	Current restrictions exist due to the overload protection function
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	0.9VDC (TYP) 0.5A 1.5VDC (MAX) 0.5A	0.2VDC (TYP) 0.5A 0.3VDC (MAX) 0.5A
Response time	OFF→ON: 2ms or less ON→OFF: 2ms or less (Resistance load)	0.5ms or less 1ms or less (Rated load, resistance load)
Surge suppressor	Zener diode	Zener diode
Fuse	3.2A (1 common/fuse) not replaceable	No
Protection function	No	Yes (Overheat protection and overload protection)
Internal current consumption	120mA (TYP. all points ON)	100mA (TYP. all points ON)
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-AnS series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

7) ERNT-ASLTY80 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-L series module model
ERNT-ASLTY80	A1SY80	16 points	LY40PT5P

[Specification comparison chart]

Model	MELSEC-AnS series A1SY80 (Source type)	MELSEC-L series LY40PT5P (Source type)
Specification		
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12/24VDC
Maximum load current	0.8A/point 3.2A/common	0.5A/point 5A/common
Maximum rush current	8A, 10ms or less	Current restrictions exist due to the overload protection function
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	1.5VDC (MAX) 0.8A	0.2VDC (TYP) 0.5A 0.3VDC (MAX) 0.5A
Response time	OFF→ON: 2ms or less ON→OFF: 2ms or less (Resistance load)	0.5ms or less 1ms or less (Rated load, resistance load)
Surge suppressor	Zener diode	Zener diode
Fuse	5A (1 common/fuse) not replaceable	No
Protection function	No	Yes (Overheat protection and overload protection)
Internal current consumption	120mA (TYP. all points ON)	100mA (TYP. all points ON)
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

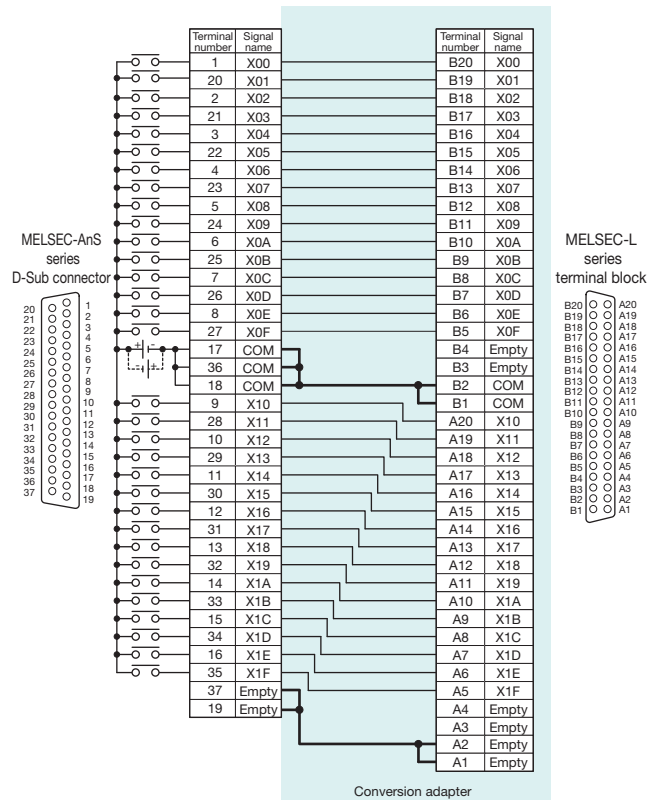

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-AnS series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

8) ERNT-ASLCXY81 D-Sub connector (37P)→Connector (40p)

Conversion adapter model	MELSEC-AnS series module model	No. of input/output points	MELSEC-L series module model
ERNT-ASLCXY81	A1SX81	32 points	LX41C4
	A1SX81-S2		
	A1SY81	32 points	LY41PT1P
	A1SY81EP		

With A1SX81/A1SX81-S2→LX41C4

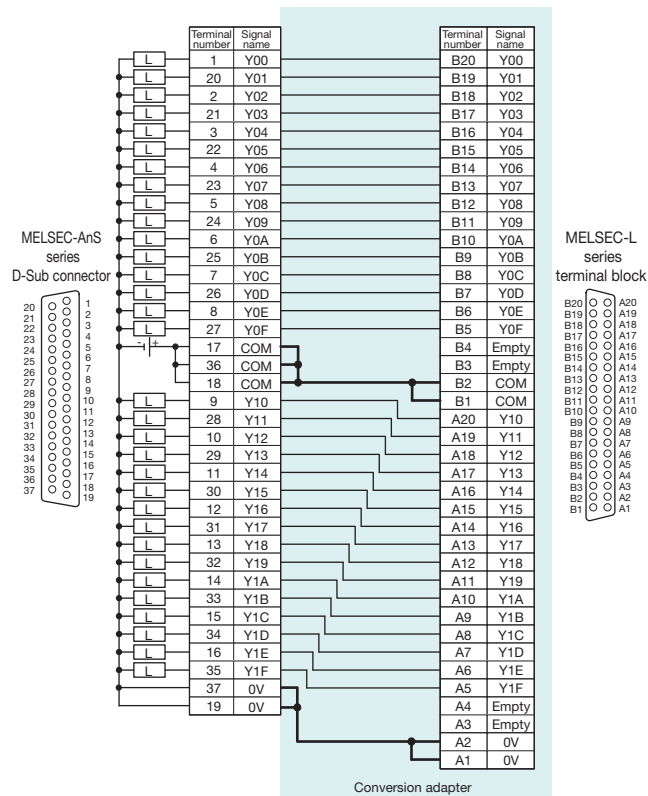

[Specification comparison chart]

Model	MELSEC-AnS series		MELSEC-L series
	A1SX81 (Sink/Source shared type)	A1SX81-S2 (Sink/Source shared type)	LX41C4 (Positive/Negative common shared type)
Specification			
No. of input points	32 points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	12VDC 24VDC	24VDC	24VDC
Rated input current	Approx. 3mA Approx. 7mA	Approx. 7mA	4mA TYP.
ON voltage	8VDC or more	13VDC or more	19VDC or more
/ ON current	/ 2mA or more	/ 3.5mA or more	/ 3mA or more
OFF voltage	4VDC or less	6VDC or less	9VDC or less
/ OFF current	/ 1mA or less	/ 1.7mA or less	/ 1.7mA or less
Input impedance	Approx. 3.3kΩ	Approx. 3.3kΩ	5.7kΩ
Response time	OFF→ON 10ms or less (24VDC) ON→OFF 10ms or less (24VDC)	10ms or less	1/5/10/20/70ms or less
Internal current consumption	80mA (TYP. all points ON)	80mA (TYP. all points ON)	100mA (TYP. all points ON)
Wiring method for common	32 points/common	32 points/common	32 points/common
External interface	37-pin D-Sub connector	37-pin D-Sub connector	40-pin connector

Notes

- When replacing A1SX81 and using a rated input voltage of 12VDC, the voltage needs to be changed to 24VDC.
- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

With A1SY81/A1SY81EP→LY41PT1P

[Specification comparison chart]

Model	MELSEC-AnS series		MELSEC-L series
	A1SY81 (Source type)	A1SY81EP (Source type)	LY41PT1P (Source type)
Specification			
No. of output points	32 points	32 points	32 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12/24VDC	12/24VDC
Maximum load current	0.1A/point 2A/common	0.1A/point, 2Apoint, 25°C 0.05A/point, 1.6Apoint, 55°C	0.1A/point 2A/common
Maximum rush current	0.4A 10ms or less	No restrictions (Overload protection function)	Current restrictions exist due to the overload protection function
OFF leakage current	0.1mA or less	0.1mA or less	0.1mA or less
ON maximum voltage drop	1.0VDC(TYP) 0.1A 2.5VDC(MAX) 0.1A	2.5VDC(0.1A Min) 3.5VDC(0.1A Max)	0.1VDC(TYP) 0.1A 0.2VDC(MAX) 0.1A
Response time	OFF→ON 2ms or less ON→OFF 2ms or less (Resistance load)	0.5ms or less 1.5ms or less (Resistance load)	0.5ms or less 1ms or less (Rated load, resistance load)
Surge suppressor	Zener diode	Clamp diode	Zener diode
Fuse	3.2A (1 common/fuse) not replaceable	No	No
Protection function	No	Yes (Overheat protection and overload protection)	Yes (Overheat protection and overload protection)
Internal current consumption	500mA (TYP. all points ON)	500mA (TYP. all points ON)	140mA (TYP. all points ON)
Wiring method for common	32 points/common	32 points/common	32 points/common
External interface	37-pin D-Sub connector	37-pin D-Sub connector	40-pin connector

Notes

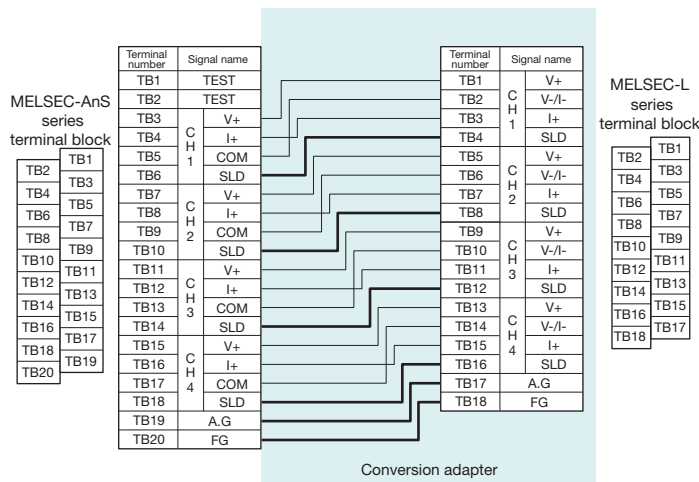

- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

For Analog Modules

1-module type

1) ERNT-ASLT64AD Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-L series module model
ERNT-ASLT64AD	A1S64AD	4 channels	L60AD4

[Specification comparison chart]

Specification		Model	MELSEC-AnS series				MELSEC-L series			
		A1S64AD				L60AD4				
Analog input	Voltage	-10 to 0 to 10VDC (Input resistance: 1MΩ)				-10 to 10VDC (Input resistance: 1MΩ)				
	Current	-20mA to 0 to 20mA (Input resistance: 250MΩ)				0 to 20mA DC (Input resistance: 250Ω)				
Digital output		16-bit signed binary When set to 1/4000, -4096 to 4095 When set to 1/8000, -8192 to 8191 When set to 1/12000, -12288 to 12287				-20480 to 20479 (During the use of scaling function -32768 to 32767)				
I/O characteristics		Analog input	Digital output value (With a 5V/20mA gain and 0V/0mA offset)			Analog input range		Digital output value	Resolution	
			When set to 1/4000	When set to 1/8000	When set to 1/12000	Voltage	0 to 10V	0 to 20000	500μV	
			10V	4000	8000		0 to 5V		250μV	
							1 to 5V		200μV	
			5V or 20mA	2000	4000		6000	-10 to 10V	-20000 to 20000	500μV
			0V or 0mA	0	0		0	1 to 5V (Extended mode)	-5000 to 22500	200μV
			-5V or -20mA	-2000	-4000		-6000	User range setting	-20000 to 20000	307μV
			-10V	-4000	-8000		-12000			
Maximum resolution		Analog input	Digital output value				Current	0 to 20mA	0 to 20000	1000nA
			When set to 1/4000	When set to 1/8000	When set to 1/12000	4 to 20mA		800nA		
			Voltage input	2.5mV	1.25mV	0.83mV		4 to 20mA (Extended mode)		-5000 to 22500
			Current input	10μA	5μA	3.33μA		User range setting	-20000 to 20000	1230nA
Overall accuracy		Analog input	Digital output value (With a 5V/20mA gain and 0V/0mA offset)			Ambient temperature 25±5°C: Within ±0.1% (±20digit) Ambient temperature 0 to 55°C: Within ±0.2% (±40digit)				
			When set to 1/4000	When set to 1/8000	When set to 1/12000					
			Within ±1.0%	±40	±80				±120	
Maximum conversion speed		20ms/channel				High speed: 20μs/channel, Medium speed: 80μs/channel, Low speed: 1ms/channel				
Absolute maximum input	Voltage	±15V				±15V				
	Current	±30mA				30mA				
No. of analog input points		4 channels/module				4 channels/module				
Isolation method	Between input terminal and programmable controller power supply	Photocoupler isolation				Photocoupler isolation				
	Between channels	Non-isolated				Non-isolated				
No. of occupied points		32 points				16 points				
Connected terminal block		20-point terminal block				18-point terminal block				
Current consumption		0.4A				0.52A				

Notes

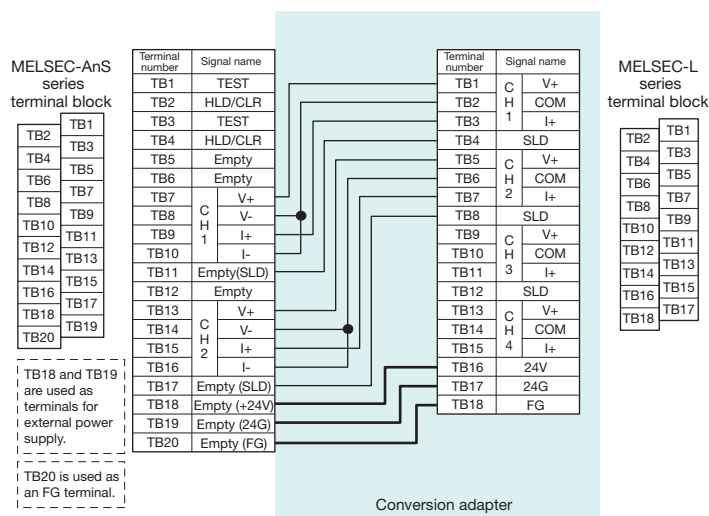

- For [] areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

- With A1S64AD and L60AD4, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- L60AD4 has a faster conversion speed than A1S64AD. As a result, the possibility exists that noise not introduced in A1S64AD will be introduced as analog signals in L60AD4. In such a case, use an averaging processing function to remove the impact of the noise.

2) ERNT-ASLT62DA Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-L series module model
ERNT-ASLT62DA	A1S62DA	2 channels	L60DA4

Notes

- For the power supply terminals (TB16 and TB17) on the L60DA4 side, use terminal numbers TB18 and TB19 on the MELSEC-AnS series side.
- Ground the FG terminal (TB18) on the L60DA4 side using terminal number TB20 on the MELSEC-AnS series side.
- L60DA4 does not have an offset/gain setting terminal or analog output hold/clear setting terminal. Analog output hold/clear setting needs to be performed using L60DA4 intelligent function module switch settings. For offset/gain and analog output hold/clear settings, refer to the L60DA4 user's manual.

[Specification comparison chart]

Model		MELSEC-AnS series				MELSEC-L series								
		A1S62DA				L60DA4								
Specification		16-bit signed binary				-20480 to 20479 (During the use of scaling function -32768 to 32767)								
Digital input		Voltage output		Current output										
	1/4000	-4000 to 4000		0 to 4000										
	1/8000	-8000 to 8000		0 to 8000										
	1/12000	-12000 to 12000		0 to 12000										
Analog output	Voltage	-10 to 0 to 10VDC (External load resistance: 2kΩ to 1MΩ)				-10 to 10VDC (External load resistance value: 1kΩ to 1MΩ)

Connected terminal block		20-point terminal block						18-point terminal block						
Current consumption		0.80A						0.16A						
External power supply	Voltage	-						24VDC +20%, -15%						
	Current	-						0.18A						

Notes

- For [] areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

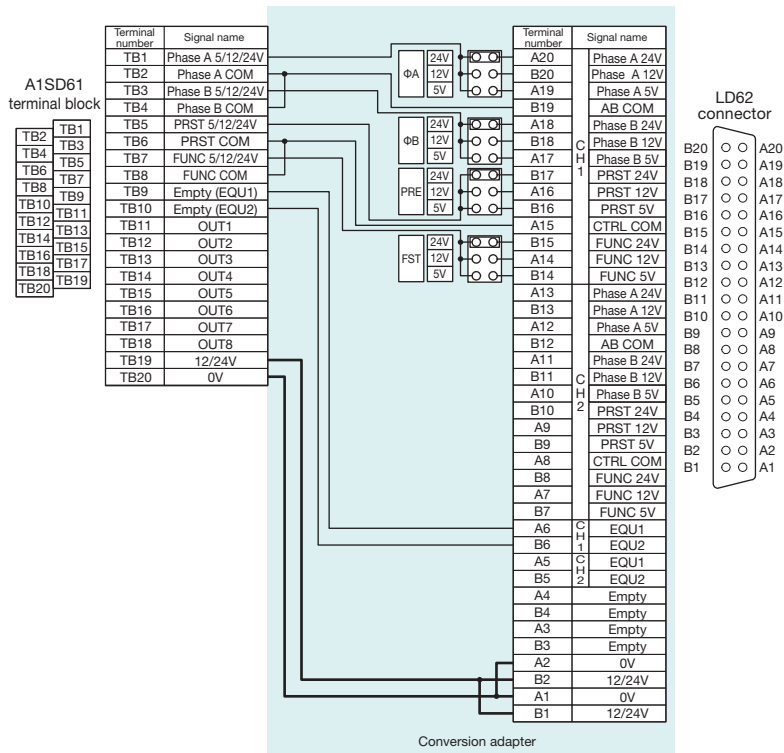

- With A1S62DA and L60DA4, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The L60DA4 CH3 and CH4 are not applicable.

For High-Speed Counter Modules

1-module type

1) ERNT-ASLTD61 Terminal block (20P)→Connector (40P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-L series module model
ERNT-ASLTD61	A1SD61	1 channel	LD62

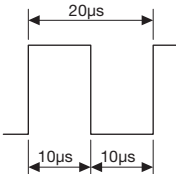

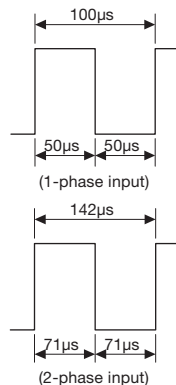

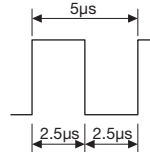

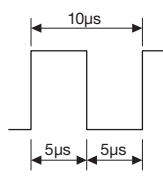

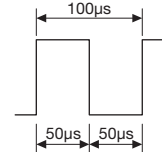

Notes

- Set the short bar of the setting pin located inside the conversion adapter to 24V during [24V] input, to 12V during [12V] input, and to 5V during [5V] input, in accordance with the input voltage of the phase A pulse input [ΦA], the phase B pulse input [ΦB], the preset input [PRE], and the function start input [FST]. Note that, at the time of factory shipment, all channels are set to [24V].
- LD62 does not have an A1SD61 limit switch output function. The OUT1 (TB11) to OUT8 (TB18) terminals therefore cannot be used. In a case where a substitution is to be made using a LD62 matching output function [CH1 EQU1 terminal (A6), CH1 EQU2 terminal (B6)], use the A1SD61 empty terminals [EQU1 terminal (TB9), EQU2 terminal (TB10)]. Note that specifications will differ, such as a fewer number of settings, etc.

- After setting the voltage setting pin, connect the external wiring.

[Specification comparison chart]

Specification		MELSEC-AnS series		MELSEC-L series			
		A1SD61		LD62			
Counting speed switch settings		Switched by setting pin		Switched by intelligent function module switch setting			
		50k side	10k side	200k (100k to 200kPPS)	100k (10k to 100kPPS)	10k (10kPPS or less)	
No. of channels		1 channel		2 channels			
Count input signal	Phase	1-phase input 2-phase input		1-phase input (1x/2x) 2-phase input (1x/2x/4x) CW/CCW input			
	Signal level (ΦA, ΦB)	5/12/24VDC 2 to 5mA					
Counter	Maximum counting speed	1-phase input: 50kPPS 2-phase input: 50kPPS	1-phase input: 10kPPS 2-phase input: 7kPPS	200kPPS (*1)	100kPPS (*1)	10kPPS (*1)	
	Counting range	32-bit signed binary -2147483648 to 2147483647					
	Model	UP/DOWN preset counter + Ring counter function					
	Minimum count pulse width (duty ratio: 50%)	 (1- or 2-phase input)		 (1-phase input) (2-phase input)	 (During 2-phase input Minimum phase difference: 1.25µs)	 (During 2-phase input Minimum phase difference: 2.5µs)	 (During 2-phase input Minimum phase difference: 25µs)
Limit switch output	Comparison range	32-bit signed binary			-		
	Comparison result	NO contact operation dog ON address ≤ Count value ≤ Dog OFF address NC contact operation dog OFF address ≤ Count value ≤ Dog ON address			-		
Coincidence output	Comparison range	-			32-bit signed binary		
	Comparison result	-			Setting value < Count value Setting value = Count value Setting value > Count value		
External input	Preset	5/12/24VDC					
	Function start	2 to 5mA					
External output	Limit switch output	Transistor (open collector) output 12/24VDC, 0.1A/point, 0.8A/common			-		
	Coincidence output	-			Transistor (sink type) output 2 points/channels 12/24VDC, 0.5A/point, 2A/common		
No. of I/O occupied points		32 points			16 points		
Connection method		20-point terminal block			40-pin connector		
Internal current consumption (5VDC)		0.35A			0.31A		

*1: The counting speed is affected by the pulse rise time and fall time t . The countable counting speed is as shown in the table below.
When a pulse with a large rise/fall time is counted, miscounting may occur. Caution is required.

Counting speed switch setting	Common to 1-phase input and 2-phase input		
Rise/Fall time	200k	100k	10k
$t=1.25\mu\text{s}$ or less	200kPPS	100kPPS	10kPPS
$t=2.5\mu\text{s}$ or less	100kPPS	100kPPS	10kPPS
$t=25\mu\text{s}$ or less	—	10kPPS	10kPPS
$t=500\mu\text{s}$	—	—	500PPS

Notes

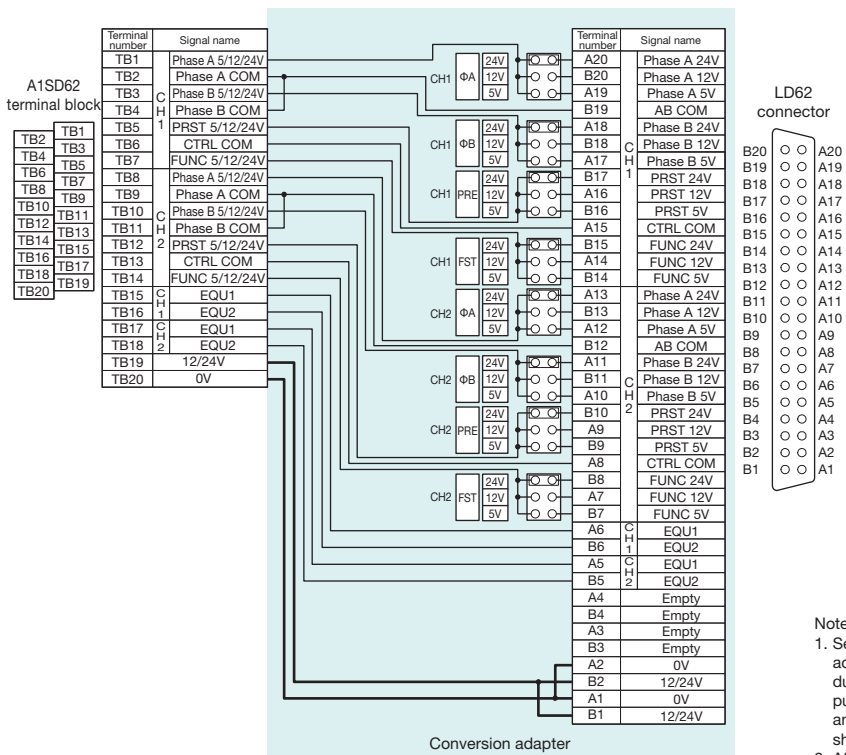

- For [] areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

●Program precautions

- With A1SD61 and LD62, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The LD62 coincidence output function is used as a substitute for the A1SD61 limit switch output function. The sequence program needs to be changed.
- For LD62, use the CH1 input/output signals (X, Y) and buffer memory address. CH2 does not operate.
- The counting speed setting set using the setting pin with A1SD61 is set using the intelligent function module switch setting with LD62.

2) ERNT-ASLTD62 Terminal block (20P)→Connector (40P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-L series module model
ERNT-ASLTD62	A1SD62	2 channels	LD62

[Specification comparison chart]

Specification		Model	MELSEC-AnS series		MELSEC-L series		
		A1SD62		LD62

	Comparison result	Setting value < Count value Setting value = Count value Setting value > Count value					
External input	Preset Function start	5/12/24VDC 2 to 5mA					
External output	Coincidence output	Transistor (sink type) output 2 points/channels 12/24VDC, 0.5A/point, 2A/common					
No. of I/O occupied points		32 points		16 points			
Connection method		20-point terminal block		40-pin connector			
Internal current consumption (5VDC)		0.1A		0.31A			

*1: The counting speed is affected by the pulse rise time and fall time t . The countable counting speed is as shown in the table below.
When a pulse with a large rise/fall time is counted, miscounting may occur. Caution is required.

Counting speed switch setting	Common to 1-phase input and 2-phase input		
Rise/Fall time	200k	100k	10k
$t=1.25\mu\text{s}$ or less	200kPPS	100kPPS	10kPPS
$t=2.5\mu\text{s}$ or less	100kPPS	100kPPS	10kPPS
$t=25\mu\text{s}$ or less	—	10kPPS	10kPPS
$t=500\mu\text{s}$	—	—	500PPS

Notes

- For areas, verify that the MELSEC-L series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-L series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

●Program precautions

- With A1SD62 and LD62, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The counting speed setting set using the setting pin with A1SD62 is set using the intelligent function module switch setting with LD62.

Base Adapter

Specifications

- The MELSEC-L series can be installed using the mounting holes of the MELSEC-AnS series base unit. (There is no need to drill holes for mounting.)
- The base adapter width dimension is the same as that of the MELSEC-AnS series base unit prior to replacement. As a result, the following precautions apply even if you do not use a space module (LG69).

Base adapter model	MELSEC-AnS series compatible base unit model name	Replacement Precautions
ERNT-ASLB38	A1S38B	—
	A1S38HB	
ERNT-ASLB35	A1S35B	—
ERNT-ASLB33	A1S33B	If extension blocks are connected, the number of modules that can be mounted is two (*1).
ERNT-ASLB32	A1S32B	If extension blocks are connected, the number of modules that can be mounted is one (*1).
ERNT-ASLBJ	A1SJCPU	—
	A1SJCPU-S3	
	A1SJHCPU	
ERNT-ASLB68	A1S68B	—
ERNT-ASLB65	A1S65B	—
ERNT-ASLB58	A1S58B	—
ERNT-ASLB55	A1S55B	—
ERNT-ASLB52	A1S52B	The number of modules that can be mounted is one (*1).

*1: Module with a width dimension of 28.5 mm.

Mounting Dimensions

- The base adapter mounting holes (four) share the same dimensions as those for the MELSEC-AnS series base unit. There is no need to drill additional holes on the control panel.
- When replacing the MELSEC-AnS series with the MELSEC-L series, the slot positions where the module is mounted are different. Adjust the wiring length prior to use.

ERNT-ASLB52	155	135	A1S52B	155	135

Usage Precautions

The conversion adapter is used to compensate the difference of the pin assignment when the MELSEC-AnS series module is replaced with the MELSEC-L series module.

When replacing MELSEC-AnS series with MELSEC-L series, be sure to refer to the manual of each module of the MELSEC-L series to verify the differences in performance, function, CPU input/output signals, buffer memory addresses, and the like prior to use.

We also recommend that you refer to the “Transition from MELSEC-AnS/QnAS (Small Type) Series to L Series Handbook” published by Mitsubishi Electric.

Module Width

- 1) The module width dimension is smaller (34.5 mm → 28.5 mm) and the wiring area is smaller, requiring verification during mounting.
- 4) If the system after replacement does not fit in the installation space (width), consider using extension blocks for branch connection.

- 2) If the wiring interferes with a mounted module, lift the wiring forward, etc., so that there is no interference.

- 3) When the replacement method described in 2) above is not possible, consider using the Mitsubishi LG69 space module.

▶ 2-2

- 5) Do not use this if the MELSEC-L series system extends beyond the base adapter width dimension.

Depth / Height

When using the base adapter

The depth increases by 50.1 to 51.3 mm.

Terminal Block Cover

The terminal block cover of the MELSEC-AnS series is larger than the MELSEC-L series module width, and therefore needs to be replaced with the terminal block cover provided with the conversion adapter.

MELSEC-AnS series module

MELSEC-L series module

Replace the cover with the terminal block cover provided with the conversion adapter.

Upgrading from the MELSEC-AnS series to the MELSEC-Q Series

- **Simplifies replacement with the MELSEC-Q series**
The upgrade tool makes it easy to replace the Mitsubishi Electric programmable controller MELSEC-AnS series with the MELSEC-Q series.
- **Significantly shortens the time required for input, output, analog, high-speed counter, temperature input, and temperature control module wiring, and significantly reduces wiring errors**
 - The upgrade tool allows you to connect the wiring connected to the MELSEC-AnS series input, output, analog, high-speed counter, temperature input, and temperature control modules as is to the MELSEC-Q series using a conversion adapter. (Some power supply and common terminal connection changes required.)
 - By using a base adapter, the MELSEC-Q series can be installed using the MELSEC-AnS series mounting holes. (Additional drilling of holes is not required.) Compatible with DIN rail installation as well.
- **Permits reuse of sequence programs**
The upgrade tool allows you to change from the MELSEC-AnS series to the MELSEC-Q series and reuse programs by changing the PLC type in the Mitsubishi Electric programming software GX Developer.

Product Overview

The MELSEC-AnS series / MELSEC-Q series upgrade tool comprises a “conversion adapter” that changes the existing wiring connected to the Mitsubishi Electric programmable controller MELSEC-AnS series modules to wiring applicable to the modules of the MELSEC-Q series, and a “base adapter” that makes it possible to install the MELSEC-Q series using the mounting holes of the MELSEC-AnS series base unit. This upgrade tool also includes a “conversion adapter DIN rail mounting bracket” required when using a conversion adapter with a fixed during DIN rail mounting.

*1: When replacing the MELSEC-AnS series with the MELSEC-Q series, verification of the mounting is required due to the change in module width and depth dimensions. For details, refer to the “Usage precautions” (page 3-50) in this catalog.

*2: Programs can be reused when changing from the MELSEC-AnS series (existing program) to the MELSEC-Q series by changing the PLC type in the Mitsubishi Electric programming software GX Developer. For details, refer to the GX Developer Operating Manual. Tools that support program replacement with the Q series are also provided by Mitsubishi Electric.

If the wiring interferes with an adjacent module, wiring space can be secured by utilizing the AnS-size Q series large type base unit.

MITSUBISHI ELECTRIC CORPORATION For MELSEC-AnS Series (small type) ⇨ MELSEC-Q Series

Upgrading using the AnS-size Q series large type base unit

The slot width of the AnS-size Q series large type base unit is the same as the slot width of the MELSEC-AnS series (small type) base unit, alleviating wiring interference with adjacent modules.

- The AnS-size Q series large type base unit (panel mounting type) has the same dimensions as the MELSEC-AnS (small type) series. There is no need to drill holes for mounting during installation.
- The AnS-size Q series large type base unit is provided with screw holes for securing the fixture that comes with the conversion adapter.
- A 2-slot type conversion adapter and a partial 1-slot type conversion adapter are not applicable. For details, see the Model List (page 3-5 to 3-6).

Types of Conversion Adapters

There are two types of conversion adapters: a conversion adapter without a support flange for a terminal block type, and a conversion adapter with a support flange for a connector type.

When the MELSEC-Q series module is a
“terminal block type” after replacement

Conversion adapter without support flange

Base adapter Use as necessary
Conversion adapter DIN rail mounting bracket Not required

When the MELSEC-Q series module is a
“connector type” after replacement

Conversion adapter with support flange

The support flange of the conversion adapter is secured using the base adapter (with panel surface mounting) or the conversion adapter DIN rail mounting bracket (with DIN rail mounting).

Further, a temperature control module with a disconnection detection function converts the wiring via a “disconnection detection connector conversion cable” in the left slot side of the MELSEC-Q series module (Q64TC□□BWN).

Left slot side of MELSEC-Q series module (Q64TC□□BWN)

Disconnection detection connector conversion cable

The connector bracket of the disconnection detection connector conversion cable is secured using the base adapter (with panel surface mounting) or the conversion adapter DIN rail mounting bracket (with DIN rail mounting).

Installing the conversion adapter with support flange

When using the conversion adapter with a support flange, reliably secure the support flange to the base adapter (with panel surface mounting) or conversion adapter DIN rail mounting bracket (with DIN rail mounting) using screws.

Panel surface installation

DIN rail installation

Installing the disconnection detection connector conversion cable

The disconnection detection connector conversion cable requires a connector bracket to be secured to the base adapter (with panel surface mounting) or the conversion adapter DIN rail mounting bracket (with DIN rail mounting) using screws.

DIN rail installation

Model List

1 Conversion Adapter

When selecting a conversion adapter, be sure to refer to the module specification comparison charts and notes on pages 3-8 to 3-46. These pages indicate precautions such as differences in the number of points per common. For detailed specifications and general specifications not stated in the module specification comparison charts, refer to the user's manual of the corresponding module. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

3 Conversion Adapter DIN Rail Mounting Bracket

When mounting the MELSEC-Q series base unit to a DIN rail and using a conversion adapter with a support flange, or a disconnection detection connector conversion cable for the temperature control module the conversion adapter DIN rail mounting bracket is required. If a conversion adapter with a support flange or a disconnection detection connector conversion cable for the temperature control module is not used, this mounting bracket is not required.

Conversion Adapter

Specifications

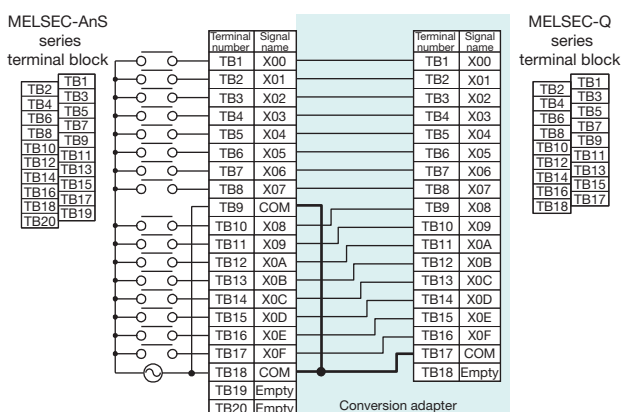

For Input/Output Modules

1-slot type

1) ERNT-ASQTX10 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of input/output points	MELSEC-Q series module model
ERNT-ASQTX10	A1SX10	16 points	QX10
	A1SX10EU		
	A1SY10		
	A1SY10EU	16 points	QY10

With A1SX10/A1SX10EU→QX10

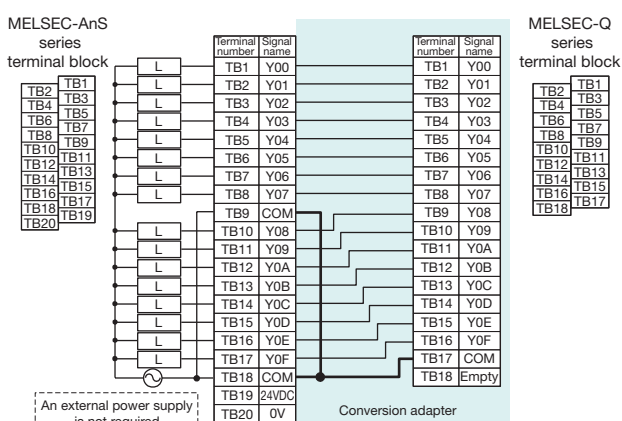

[Specification comparison chart]

Model	MELSEC-AnS series		MELSEC-Q series
	A1SX10	A1SX10EU	QX10
Specification			
No. of input points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	100 to 120VAC, 50/60Hz	100 to 120VAC, 50/60Hz	100 to 120VAC (+10/-15%) 50/60Hz (±3Hz)
Rated input current	Approx. 6mA (100VAC, 60Hz)	Approx. 7mA (120VAC, 60Hz)	Approx. 8mA (100VAC, 60Hz) Approx. 7mA (100VAC 50Hz)
Rush current	200mA, maximum, within 1ms (132VAC)	200mA, maximum, within 1ms (132VAC)	200mA, maximum, within 1ms (132VAC)
ON voltage / ON current	80VAC or more / 5mA or more	80VAC or more / 5mA or more	80VAC or more / 5mA or more
OFF voltage / OFF current	30VAC or less / 1.4mA or less	30VAC or less / 1.4mA or less	30VAC or less / 1.7mA or less
Input impedance	Approx. 18kΩ (60Hz) Approx. 21kΩ (50Hz)	Approx. 18kΩ (60Hz) Approx. 21kΩ (50Hz)	Approx. 12kΩ (60Hz) Approx. 15kΩ (50Hz)
Response time	OFF→ON 20ms or less ON→OFF 35ms or less	20ms or less 35ms or less	15ms or less 20ms or less
Internal current consumption	50mA (TYP. all points ON)	50mA (TYP. all points ON)	50mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the module specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

With A1SY10/A1SY10EU→QY10

[Specification comparison chart]

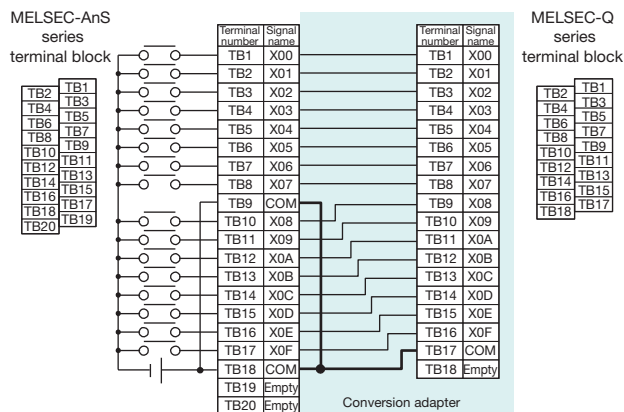

Model	MELSEC-AnS series		MELSEC-Q series
	A1SY10	A1SY10EU	QY10
Specification			
No. of output points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Relay isolation
Rated switching voltage/current	240VAC/2A (COSΦ=1) 24VDC/2A (Resistance load) (8A/common)	120VAC/2A (cosΦ=1) 24VDC/2A (Resistance load) (8A/common)	240VAC/2A (cosΦ=1) 24VDC/2A (Resistance load) (8A/common)
Minimum switching load	5VDC, 1mA	5VDC, 1mA	5VDC, 1mA
Maximum switching voltage	264VAC, 125VDC	132VAC, 125VDC	264VAC, 125VDC
Response time	OFF→ON 10ms or less ON→OFF 12ms or less	10ms or less 12ms or less	10ms or less 12ms or less
Surge suppressor	No	No	No
Fuse	No	No	No
Internal current consumption	120mA (TYP. all points ON)	120mA (TYP. all points ON)	430mA (TYP. all points ON)
Wiring method for common	8 points/common	8 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB18 on the MELSEC-AnS series side are used separately, a wiring change is required.
- An external power supply connected to terminal numbers TB19 and TB20 on the MELSEC-AnS series side is not required.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

2) ERNT-ASQTX40 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of input points	MELSEC-Q series module model
ERNT-ASQTX40	A1SX40	16 points	QX40
	A1SX40-S2	16 points	QX40
	A1SX40-S1	16 points	QX40-S1

Model	MELSEC-AnS series	MELSEC-Q series
	A1SX40-S1 (Sink type)	QX40-S1 (Positive common type)
Specification		
No. of input points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated input voltage	24VDC	24VDC (+20/-15%, within a ripple rate of 5%)
Rated input current	Approx. 7mA	Approx. 6mA
ON voltage / ON current	14VDC or more / 4mA or more	19VDC or more / 4mA or more
OFF voltage / OFF current	6.5VDC or less / 1.7mA or less	11VDC or less / 1.7mA or less
Input impedance	Approx. 3.3kΩ	Approx. 3.9kΩ
Response time	OFF→ON: 0.1ms or less ON→OFF: 0.2ms or less	0.1/0.2/0.4/0.6/1ms
Internal current consumption	50mA (TYP. all points ON)	60mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

[Specification comparison chart]

Model	MELSEC-AnS series	MELSEC-Q series	
	A1SX40 (Sink type)	QX40 (Positive common type)	QX70 (Positive/Negative common shared type)
Specification			
No. of input points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	12/24VDC	24VDC (+20/-15%, within a ripple rate of 5%)	5VDC 12VDC
Rated input current	Approx. 3mA/Approx. 7mA	Approx. 4mA	Approx. 1.2mA Approx. 3.3mA
ON voltage / ON current	8VDC or more / 2mA or more	19VDC or more / 3mA or more	3.5V or more / 1mA or more
OFF voltage / OFF current	4VDC or less / 1mA or less	11VDC or less / 1.7mA or less	1V or less / 0.1mA or less
Input impedance	Approx. 3.3kΩ	Approx. 5.6kΩ	Approx. 3.3kΩ
Response time	OFF→ON: 10ms or less ON→OFF: 10ms or less	1/5/10/20/70ms or less	1/5/10/20/70ms or less
Internal current consumption	50mA (TYP. all points ON)	50mA (TYP. all points ON)	55mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block	18-point terminal block

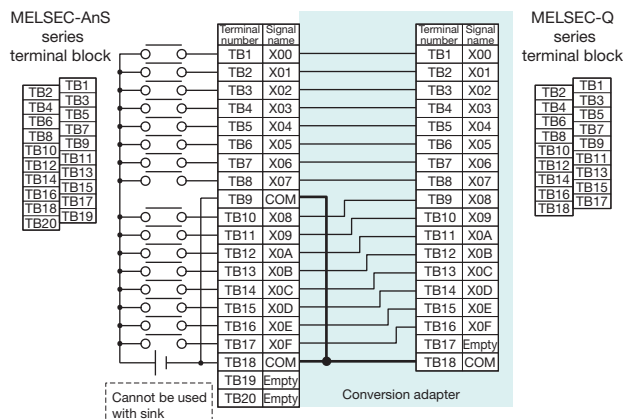

Model	MELSEC-AnS series	MELSEC-Q series
	A1SX40-S2 (Sink type)	QX40 (Positive common type)
Specification		
No. of input points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated input voltage	24VDC	24VDC (+20/-15%, within a ripple rate of 5%)
Rated input current	Approx. 7mA	Approx. 4mA
ON voltage / ON current	14VDC or more / 3.5mA or more	19VDC or more / 3mA or more
OFF voltage / OFF current	6.5VDC or less / 1.7mA or less	11VDC or less / 1.7mA or less
Input impedance	Approx. 3.3kΩ	Approx. 5.6kΩ
Response time	OFF→ON: 10ms or less ON→OFF: 10ms or less	1/5/10/20/70ms or less
Internal current consumption	50mA (TYP. all points ON)	50mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When replacing A1SX40 with QX40 and using rated input voltage of 12VDC, the voltage needs to be changed to 24VDC.
- When replacing A1SX40 with QX70 and using rated input voltage of 24VDC, the voltage needs to be changed to 12VDC.
- For ☐ areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

3) ERNT-ASQTX80 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of input points	MELSEC-Q series module model
ERNT-ASQTX80	A1SX80	16 points	QX80
	A1SX80-S1		
	A1SX80-S2		

[Specification comparison chart]

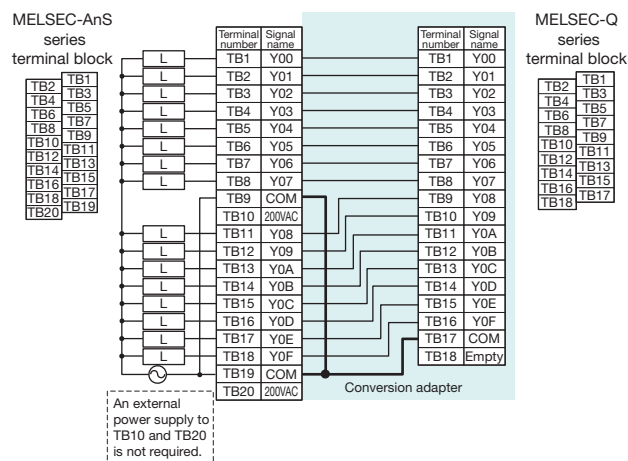

Model	MELSEC-AnS series			MELSEC-Q series
	A1SX80 (Sink/Source type)	A1SX80-S1 (Sink/Source type)	A1SX80-S2 (Sink/Source type)	QX80 (Negative common type)
Specification				
No. of input points	16 points	16 points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	12/24VDC	24VDC	24VDC	24VDC (+20/-15%, within a ripple rate of 5%)
Rated input current	Approx. 3mA / Approx. 7mA	Approx. 7mA	Approx. 7mA	Approx. 4mA
ON voltage / ON current	8VDC or more / 2mA or more	17VDC or more / 5mA or more	13VDC or more / 3.5mA or more	19VDC or more / 3mA or more
OFF voltage / OFF current	4VDC or less / 1mA or less	5VDC or less / 1.7mA or less	6VDC or less / 1.7mA or less	11VDC or less / 1.7mA or less
Input impedance	Approx. 3.3kΩ	Approx. 3.3kΩ	Approx. 3.3kΩ	Approx. 5.6kΩ
Response time	OFF→ON: 10ms or less ON→OFF: 10ms or less	0.4ms or less	10ms or less	1/5/10/20/70ms or less
Internal current consumption	50mA (TYP. all points ON)	50mA (TYP. all points ON)	50mA (TYP. all points ON)	50mA (TYP. all points ON)
Wiring method for common	16 points/common	16 points/common	16 points/common	16 points/common
External interface	20-point terminal block	20-point terminal block	20-point terminal block	18-point terminal block

Notes

- Use with source input. (Use with sink input is not permitted.)
- When replacing A1SX80 with QX80 and using rated input voltage of 12VDC, the voltage needs to be changed to 24VDC.
- For ☐ areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

4) ERNT-ASQTY22 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-Q series module model
ERNT-ASQTY22	A1SY22	16 points	QY22

[Specification comparison chart]

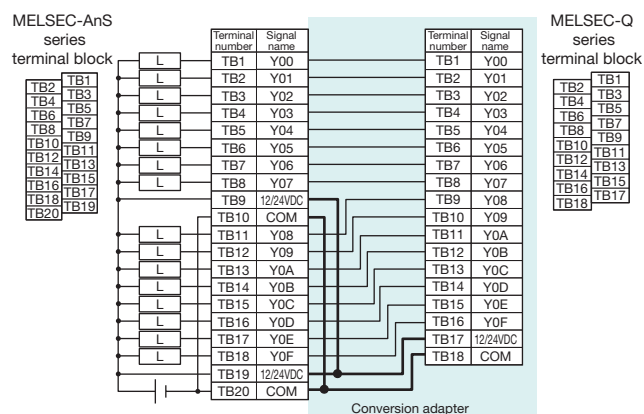

Specification	Model	
	MELSEC-AnS series	MELSEC-Q series
	A1SY22	QY22
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	100/240VAC	100 to 240VAC (+10/-15%)
Maximum load current	0.6A/point 2.4A/common	0.6A/point 4.8A/common
Minimum load voltage/current	24VAC 100mA 100VAC 10mA 240VAC 20mA	24VAC 100mA 100VAC 25mA 240VAC 25mA
Maximum rush current	20A 10ms or less, 8A 100ms or less	20A, one cycle or less
OFF leakage current	1.5mA (120VAC, 60Hz) 3mA (240VAC, 60Hz)	1.5mA (at 120VAC, 60Hz) 3mA or less (at 240VAC, 60Hz)
ON maximum voltage drop	1.5VAC or less (0.1 to 0.6A) 1.8VAC or less (50 to 100mA) 2VAC or less (10 to 50mA)	1.5V or less
Response time	OFF→ON: 1ms or less ON→OFF: 0.5Hz + 1ms or less	1ms or less 1ms + 0.5 cycles or less
Surge suppressor	CR absorber	CR absorber
Fuse	5A (1 common/fuse) not replaceable	No (Fuse installation recommended with external wiring)
Internal current consumption	270mA (TYP. all points ON)	250mA (TYP. all points ON)
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 on the MELSEC-AnS series side are used separately, a wiring change is required.
- An external power supply connected to terminal numbers TB10 and TB20 on the MELSEC-AnS series side is not required.
- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

5) ERNT-ASQTY40 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-Q series module model
ERNT-ASQTY40	A1SY40 A1SY40P	16 points	QY40P

[Specification comparison chart]

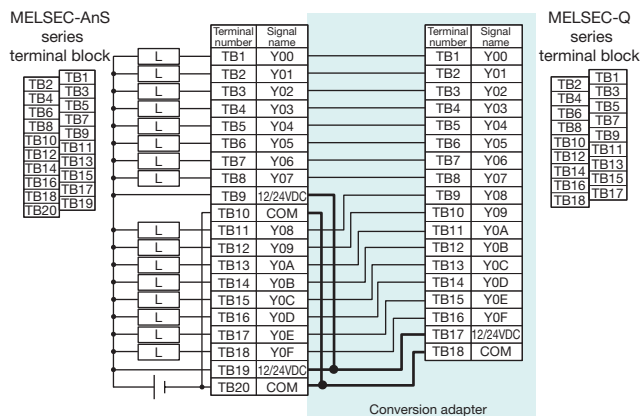

Specification	Model	
	MELSEC-AnS series	MELSEC-Q series
	A1SY40 (Sink type)	A1SY40P (Sink type)
No. of output points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	12/24VDC	12 to 24VDC
Maximum load current	0.1A/point 0.8A/common	0.1A/point 1.6A/common
Maximum rush current	0.4A, 10ms or less	0.7A, 10ms or less
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	1.0VDC (TYP) 0.1A 2.5VDC (MAX) 0.1A	0.1VDC (TYP) 0.1A 0.2VDC (MAX) 0.1A
Response time	OFF→ON: 2ms or less ON→OFF: 2ms or less (Resistance load)	1ms or less 1ms or less (Rated load, resistance load)
Surge suppressor	Zener diode	Zener diode
Fuse	1.6 A (1 common/fuse) not replaceable	No
Internal current consumption	270mA (TYP. all points ON)	79mA (TYP. all points ON)
Protection function	No	Yes (Overheat protection function, short-circuit protection)
Wiring method for common	8 points/common	16 points/common
External interface	20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-AnS series side are used separately, a wiring change is required.
- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

6) ERNT-ASQTY50 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-Q series module model
ERNT-ASQTY50	A1SY50	16 points	QY50

[Specification comparison chart]

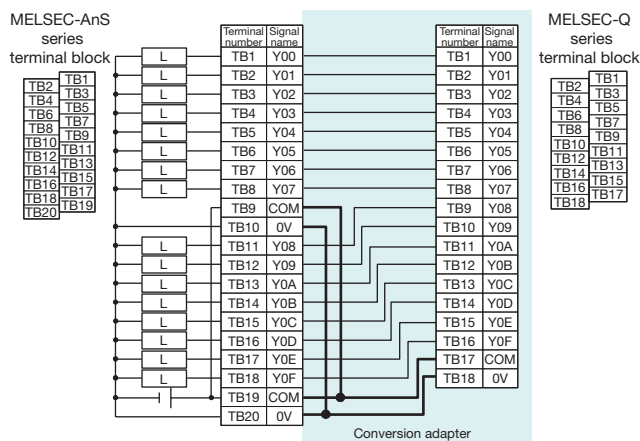

Specification	Model	MELSEC-AnS series	MELSEC-Q series
		A1SY50 (Sink type)	QY50 (Positive common type)
No. of output points		16 points	16 points
Isolation method		Photocoupler isolation	Photocoupler isolation
Rated load voltage		12/24VDC	12 to 24VDC
Maximum load current		0.5A/point 2A/common	0.5A/point 4A/common
Maximum rush current		4A, 10ms or less	4A, 10ms or less
OFF leakage current		0.1mA or less	0.1mA or less
ON maximum voltage drop		0.9VDC (TYP) 0.5A 1.5VDC (MAX) 0.5A	0.2VDC (TYP) 0.5A 0.3VDC (MAX) 0.5A
Response time	OFF→ON	2ms or less	1ms or less
	ON→OFF	2ms or less (Resistance load)	1ms or less (Rated load, resistance load)
Surge suppressor		Zener diode	Zener diode
Fuse		Yes	6.7A (not replaceable)
Internal current consumption		120mA (TYP. all points ON)	80mA (TYP. all points ON)
Wiring method for common		8 points/common	16 points/common
External interface		20-point terminal block	18-point terminal block

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-AnS series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

7) ERNT-ASQTY80 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-Q series module model
ERNT-ASQTY80	A1SY80	16 points	QY80

[Specification comparison chart]

Specification	Model	MELSEC-AnS series	MELSEC-Q series
		A1SY80 (Source type)	QY80 (Source type)
No. of output points		16 points	16 points
Isolation method		Photocoupler isolation	Photocoupler isolation
Rated load voltage		12/24VDC	12 to 24VDC
Maximum load current		0.8A/point 3.2A/common	0.5A/point 4A/common
Maximum rush current		8A, 10ms or less	4A, 10ms or less
OFF leakage current		0.1mA or less	0.1mA or less
ON maximum voltage drop		1.5VDC (MAX) 0.8A	0.2VDC (TYP) 0.5 A 0.3VDC (MAX) 0.5 A
Response time	OFF→ON	2ms or less	1ms or less
	ON→OFF	2ms or less (Resistance load)	1ms or less (Rated load, resistance load)
Surge suppressor		Zener diode	Zener diode
Fuse		5A (1 common/fuse) not replaceable	6.7A (not replaceable)
Internal current consumption		120mA (TYP. all points ON)	80mA (TYP. all points ON)
Wiring method for common		8 points/common	16 points/common
External interface		20-point terminal block	18-point terminal block

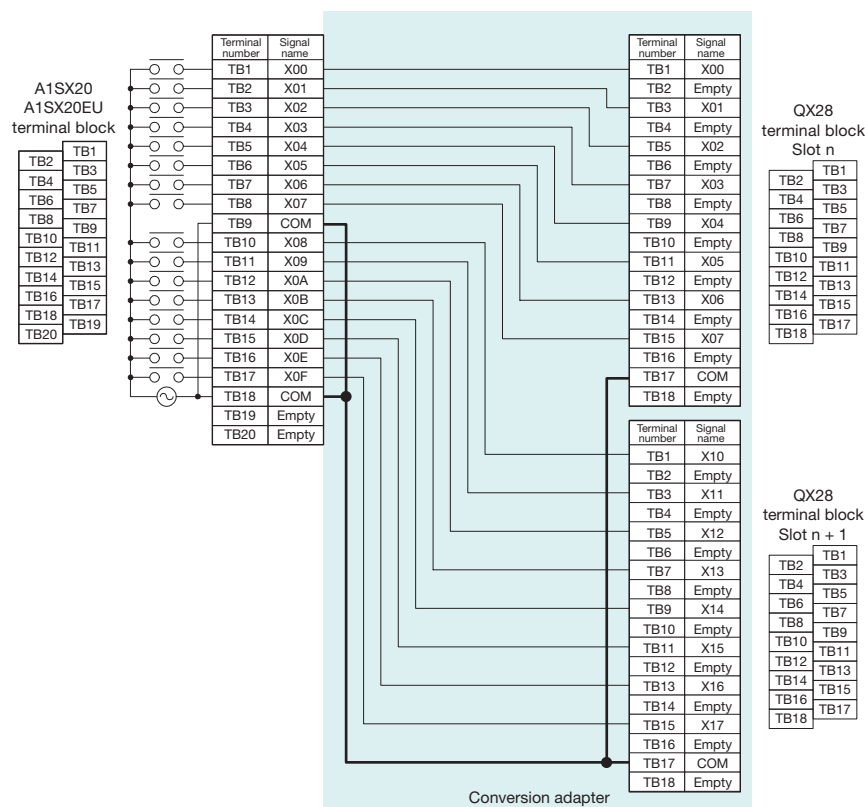

Notes

- When the number of points per common changes from eight (two circuits) to 16 and the terminal numbers TB9 and TB19 as well as TB10 and TB20 on the MELSEC-AnS series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

2-slot type

1) ERNT-ASQTX20 Terminal block (20P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-AnS series module model	No. of input points	MELSEC-Q series module model	No. of required modules
ERNT-ASQTX20	A1SX20	16 points	QX28	2 modules
	A1SX20EU			

[Specification comparison chart]

Model	MELSEC-AnS series		MELSEC-Q series
	A1SX20	A1SX20EU	QX28
Specification			
No. of input points	16 points	16 points	8 points
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Rated input voltage	200 to 240VAC, 50/60Hz	200 to 240VAC, 50/60Hz	100 to 240VAC (+10%/-15%), 50/60Hz (±3Hz)
Rated input current	Approx. 9 mA (200VAC, 60Hz)	Approx. 11mA (240VAC, 60Hz)	Approx. 17mA (200VAC, 60Hz), Approx. 14mA (200VAC, 50Hz) Approx. 8 mA (100VAC, 60Hz), Approx. 7mA (100VAC, 50Hz)
Rush current	500mA, maximum, within 1ms (264VAC)	500mA, maximum, within 1ms (264VAC)	500mA, maximum, within 1ms (264VAC)
ON voltage / ON current	80VAC or more / 4mA or more	80VAC or more / 4mA or more	80VAC or more / 5mA or more (50Hz, 60Hz)
OFF voltage / OFF current	30VAC or less / 1mA or less	30VAC or less / 1mA or less	30VAC or less / 1.7mA or less (50Hz, 60Hz)
Input impedance	Approx. 22kΩ (60Hz), Approx. 27kΩ (50Hz)	Approx. 22kΩ (60Hz), Approx. 27kΩ (50Hz)	Approx. 12kΩ (60Hz), Approx. 15kΩ (50Hz)
Response time	OFF→ON	30ms or less (200VAC, 60Hz)	30ms or less (200VAC, 60Hz)
	ON→OFF	55ms or less (200VAC, 60Hz)	55ms or less (200VAC, 60Hz)

Wiring method for common	16 points/common	16 points/common	8 points/common
External interface	20-point terminal block	20-point terminal block	18-point terminal block

Notes

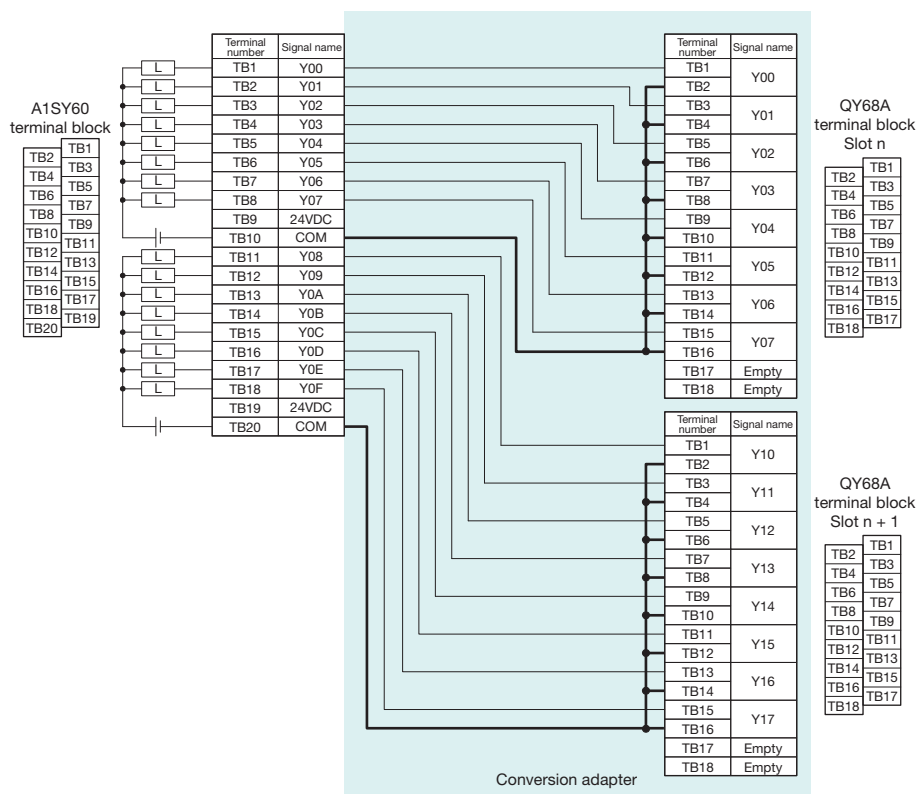

- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

QX28 is a 16-point occupied module, requiring a program change of the latter 8 points X08 to X0F used in A1SX20/A1SX20EU to X10 to X17.

2) ERNT-ASQTY60 Terminal block (20P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-Q series module model	No. of required modules
ERNT-ASQTY60	A1SY60	16 points	QY68A	2 modules

Notes

1. The wiring connected to the 24VDC terminals (TB9 and TB19) on the MELSEC-AnS side is not required. However, leaving the connection as is causes no problem because those wires are not connected in the conversion adapter.

[Specification comparison chart]

Model	MELSEC-AnS series	MELSEC-Q series
	A1SY60 (Sink type)	QY68A (Sink/Source type)
Specification		
No. of output points	16 points	8 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated load voltage	24VDC	5 to 24VDC (+20/-10%)
Maximum load current	2A/point, 4A/common (25°C) 1.8A/point, 3.6A/common (45°C) 1.6A/point, 3.2A/common (55°C)	2A/point, 8A/module
Maximum rush current	8A, 10ms or less	8A, 10ms or less
OFF leakage current	0.1mA or less	0.1mA or less
ON maximum voltage drop	0.9VDC (TYP) 2A 1.5VDC (MAX) 0.5A	0.3VDC (MAX) 2A
Response time	OFF→ON	3ms or less
	ON→OFF	10ms or less (Resistance load)
Surge suppressor	Zener diode	Zener diode
Fuse	Yes	No
Internal current consumption	120mA (TYP. all points ON)	110mA (MAX all points ON)
Wiring method for common	8 points/common	All points independent
External interface	20-point terminal block	18-point terminal block

Notes

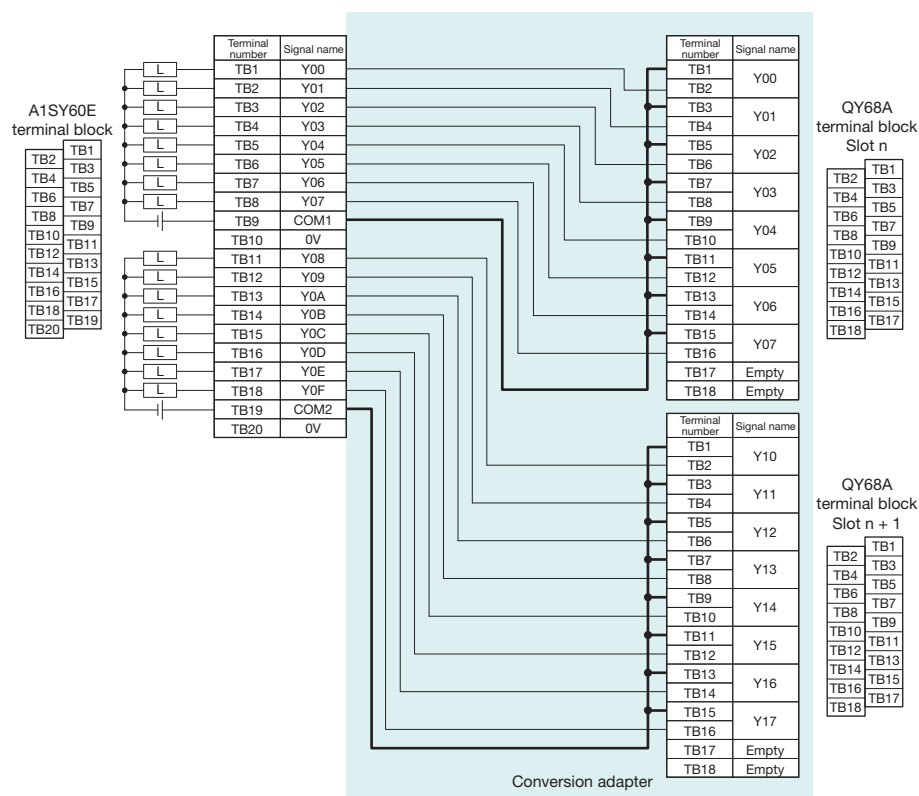

2. For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
3. For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

QY68A is a 16-point occupied module, requiring a program change of the latter 8 points Y08 to Y0F used in A1SY60 to Y10 to Y17.

3) ERNT-ASQTY60E Terminal block (20P)→Terminal block (18P) × 2

Conversion adapter model	MELSEC-AnS series module model	No. of output points	MELSEC-Q series module model	No. of required modules
ERNT-ASQTY60E	A1SY60E	16 points	QY68A	2 modules

Notes

- The wiring connected to the 0V terminals (TB10, TB20) on the MELSEC-AnS side is not required. Further, in a case where the load voltage is 5VDC, the connected 12/24VDC power supply is also not required. However, leaving the connection as is causes no problem because those wires are not connected in the conversion adapter.

[With 12/24VDC load voltage]

[With 5VDC load voltage]

[Specification comparison chart]

Model	MELSEC-AnS series		MELSEC-Q series	
	A1SY60E (Source type)		QY68A (Sink/Source type)	
Specification

Notes

- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

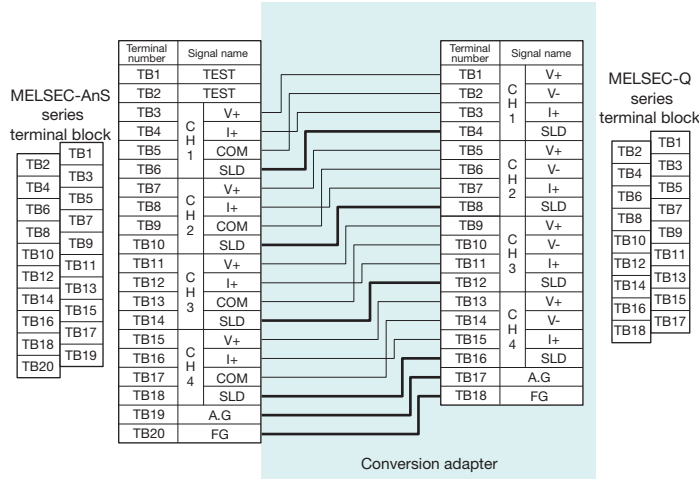

QY68A is a 16-point occupied module, requiring a program change of the latter 8 points Y08 to Y0F used in A1SY60E to Y10 to Y17.

For Analog Modules

1-slot type

1) ERNT-ASQT64AD Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQT64AD	A1S64AD	4 channels	Q64AD

Notes

1. Be sure to ground the FG terminal (TB20).

2. Q64AD does not have an offset/gain setting terminal. For offset/gain setting, refer to the Q64AD user's manual.

[Specification comparison chart]

Model		MELSEC-AnS series				MELSEC-Q series									
		A1S64AD				Q64AD									
Specification															
Analog input	Voltage	-10 to 0 to 10VDC (Input resistance: 1MΩ)				-10 to 10VDC (Input resistance: 1MΩ)

No. of occupied points		32 points				16 points									
Connected terminal block		20-point terminal block				18-point terminal block									
Current consumption		0.4A				0.63A									

Notes

3. For ☐ areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

4. For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

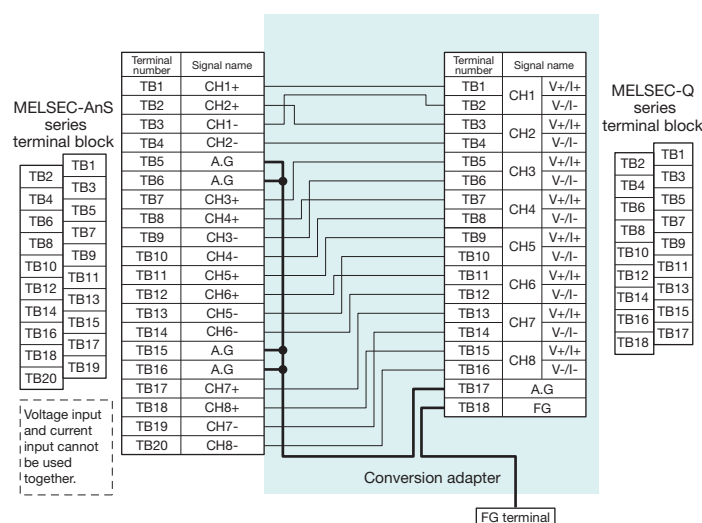

•Program precautions

1) With A1S64AD and Q64AD, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

2) Q64AD has a faster conversion speed than A1S64AD. As a result, the possibility exists that noise not introduced in A1S64AD will be introduced as analog signals in Q64AD. In such a case, use an averaging processing function to remove the impact of the noise.

2) ERNT-ASQT68AD Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQT68AD	A1S68AD (Voltage input)	8 channels	Q68ADV
	A1S68AD (Current input)	8 channels	Q68ADI

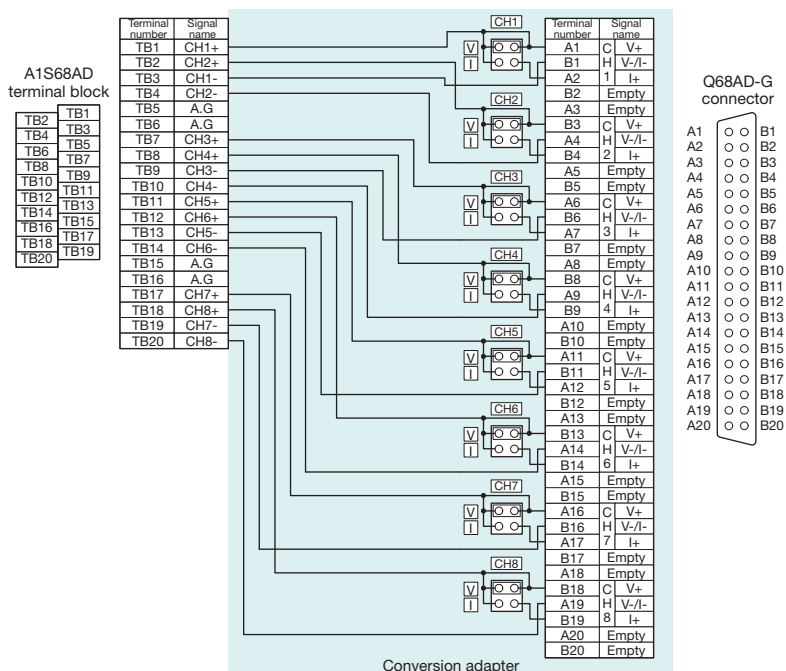

[Specification comparison chart]

Model		MELSEC-AnS series		MELSEC-Q series					
		A1S68AD		Q68ADV			Q68ADI

3) ERNT-ASQT68AD-G Terminal block (20P)→Connector (40P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQT68AD-G	A1S68AD	8 channels	Q68AD-G

Notes

- Set the short bar of the setting pin located inside the conversion adapter to the [V] side during voltage input and to the [I] side during current input, in accordance with the input of each channel [CH1] to [CH8]. Note that, at the time of factory shipment, all channels are set to voltage input (the [V] side).
- Q68AD-G does not have an AG terminal. The wiring connected to the AG terminals (TB5, TB6, TB15, TB16) on the MELSEC-AnS side, therefore, is not required. However, leaving the connection as is causes no problem because those wires are not connected in the conversion adapter.
- After setting the V/I setting pin, connect the external wiring.

- *1: Accuracy of ambient temperature during offset/gain setting.
 *2: "2 digits" indicates the digital value.
 *3: Accuracy per 1°C temperature change.
 *4: Cycle by which the A/D conversion value is updated.
 *5: Time until the input signal reaches the AD converter inside Q68AD-G.
 *6: When averaging processing is specified to even one channel, the setting becomes 1 ms/channel for all channels.

Notes

- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

- With A1S68AD and Q68AD-G, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- An input range set by a DIP switch in A1S68AD is set using the intelligent function module switch setting in Q68AD-G.

4) ERNT-ASQT62DA Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model

TB18	TB17

Notes

- For the power supply (power supply terminals TB16 and TB17) on the Q62DAN side, use terminal numbers TB18 and TB19 on the MELSEC-AnS series side.
- Ground the FG terminal (terminal number TB18) on the Q62DAN side using terminal number TB20 on the MELSEC-AnS series side.
- Q62DAN does not have an offset/gain setting terminal or analog output hold/clear setting terminal. Analog output hold/clear setting needs to be performed using Q62DAN intelligent function module switch settings. For offset/gain and analog output hold/clear settings, refer to the Q62DAN user's manual.

ERNT-ASQT68DA	A1S68DAV	8 channels	Q68DAVN
	A1S68DAI	8 channels	Q68DAIN

Notes

- For the power supply (power supply terminals TB17 and TB18) to the Q68DAVN/Q68DAIN side, use terminal numbers TB19 and TB20 on the MELSEC-AnS series side.
- Wire the FG terminal connected to terminal number TB20 on the MELSEC-AnS series side to the FG terminal on the Q68DAVN/Q68DAIN side.

- Q68DAVN/Q68DAIN does not have an analog output hold/clear setting terminal. Analog output hold/clear setting needs to be performed using Q68DAVN/Q68DAIN intelligent function module switch settings.

[Specification comparison chart]

Model		MELSEC-AnS series		MELSEC-Q series							
Specification		A1S68DAV		Q68DAVN							
Digital input		16-bit signed binary -2048 to 2047		16-bit signed binary (Normal resolution mode: -4096 to 4095, High resolution mode: -12288 to 12287, -16384 to 16383)							
Analog output		-10 to 0 to 10VDC (External load resistance: 2kΩ to 1MΩ)		-10 to 10VDC (External load resistance value: 1kΩ to 1MΩ)							
I/O characteristics		Digital input	Analog output	Analog output range		Normal resolution mode		High resolution mode			
		2000	10V			Digital input value	Maximum resolution	Digital input value	Maximum resolution		
		1000	5V	Voltage	0 to 5V	0 to 4000	1.25mA	0 to 12000	0.416mV		
		0	0V				1.0mA		0.333mV		
		-1000	-5V				-10 to 10V		2.5mA	-16000 to 16000	0.625mV
		-2000	-10V				User range setting		-4000 to 4000	0.75mV	-12000 to 12000
Maximum resolution		5mV									
Overall accuracy		Voltage: ±1.0% (±100mV)		At ambient temperature of 25±5°C, within ±0.1% (Voltage: ±10mV) At ambient temperature of 0 to 55°C, within ±0.3% (Voltage: ±30mV)							
Maximum conversion speed		Within 4ms / 8 channels		80μs/channel							
Absolute maximum output		—		±12V							
No. of analog output points		8 channels/module		8 channels/module							
Isolation method	Between output terminal and programmable controller power supply	Photocoupler isolation		Photocoupler isolation							
	Between channels	Non-isolated		Non-isolated							
	Between external power supply and analog output	—		Transformer isolation							
No. of occupied points		32 points		16 points							
Connected terminal block		20-point terminal block		18-point terminal block							
Current consumption		0.65A		0.38A							
External power supply	Voltage	—		24VDC +20%, -15%							
	Current	—		0.2A							

Model		MELSEC-AnS series		MELSEC-Q series					
Specification		A1S68DAI		Q68DAIN					
Digital input		16-bit signed binary 0 to 4096		16-bit signed binary (Normal resolution mode: -4096 to 4095, High resolution mode: -12288 to 12287, -16384 to 16383)					
Analog output		4 to 20mA DC (External load resistance: 0 to 600Ω)		0 to 20mA DC (External load resistance value: 0 to 600Ω)					
I/O characteristics		Digital input	Analog output	Analog output range		Normal resolution mode		High resolution mode	
		4000	20mA			Digital input value	Maximum resolution	Digital input value	Maximum resolution
		2000	12mA	Current	0 to 4000	5μA	0 to 12000	1.66μA	
		0	4mA			4 to 20mA	4μA	0 to 12000	1.33μA
Maximum resolution		4μA		User range setting	-4000 to 4000	1.5μA	-12000 to 12000	0.83μA	
Overall accuracy		Voltage: ±1.0% (±200μA)		At ambient temperature of 25±5°C, within ±0.1% (Current: ±20μA) At ambient temperature of 0 to 55°C, within ±0.3% (Current: ±60μA)

	Between channels	Non-isolated		Non-isolated					
	Between external power supply and analog output	—		Transformer isolation					
No. of occupied points		32 points		16 points					
Connected terminal block		20-point terminal block		18-point terminal block					
Current consumption		0.85A		0.38A					
External power supply	Voltage	—		24VDC +20%, -15%					
	Current	—		0.27A					

Notes

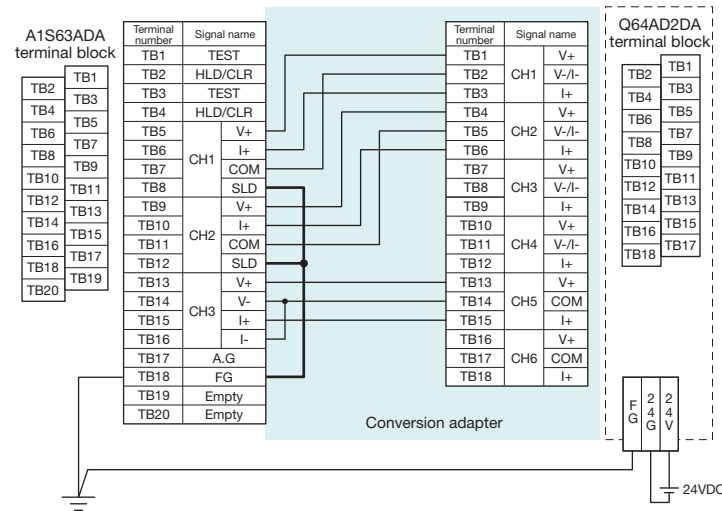

- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

Program precautions

With A1S68DAV/A1S68DAI and Q68DAVN/Q68DAIN, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

6) ERNT-ASQT63ADA Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQT63ADA	A1S63ADA	Input: 2 channels Output: 1 channels	Q64AD2DA

Notes

- Q64AD2DA does not have an offset/gain setting terminal or analog output hold/clear setting terminal. Analog output hold/clear setting needs to be performed using Q64AD2DA intelligent function module switch settings. For offset/gain and analog output hold/clear settings, refer to the Q64AD2DA user's manual.
- Be sure to ground the FG terminal (TB18) of A1S63ADA.
- The 24VDC power supply and FG need to be connected to the external power supply connector located below the Q64AD2DA module.
- Q64AD2DA does not have an AG terminal. The wiring that connects the AG terminal (TB17) and the SLD terminal (TB12) on the MELSEC-AnS side, therefore, is not required. However, leaving the connection as is causes no problem because those wires are not connected in the conversion adapter.

[Specification comparison chart]

Specification		Model	MELSEC-AnS series				MELSEC-Q series							
			A1S63ADA				Q64AD2DA

Notes

- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

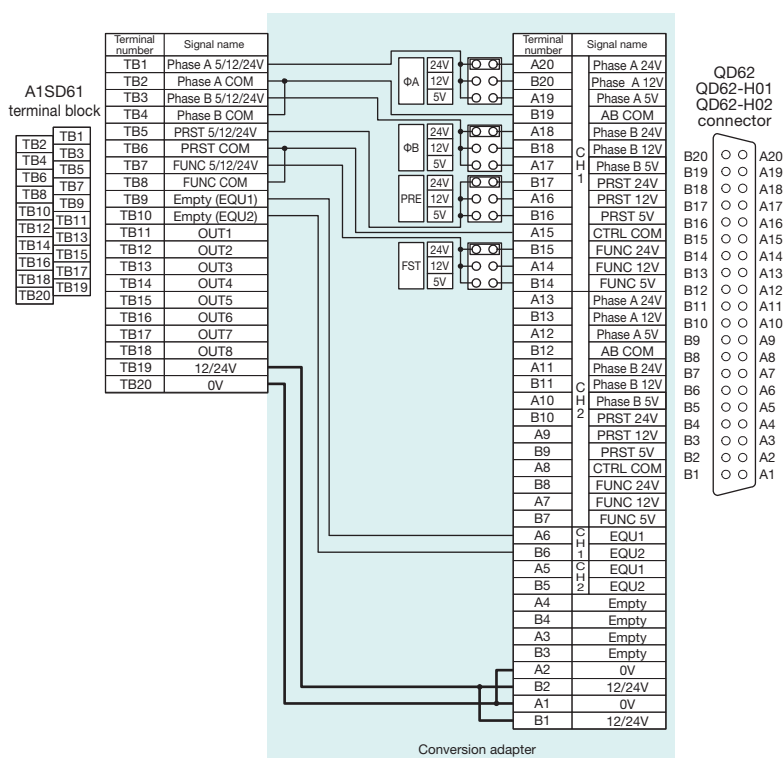

- With A1S63ADA and Q64AD2DA, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- Q64AD2DA has a faster conversion speed than A1S63ADA. As a result, the possibility exists that noise not introduced in A1S63ADA will be introduced as analog signals in Q64AD2DA. In such a case, use an averaging processing function to remove the impact of the noise.
- Use Q64AD2DA CH5 for analog output CH3 of A1S63ADA.

For High-Speed Counter Modules

1-slot type

1) ERNT-ASQTD61 Terminal block (20P)→Connector (40P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQTD61	A1SD61	1 channel	QD62
			QD62-H01
			QD62-H02

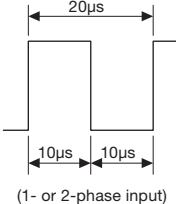

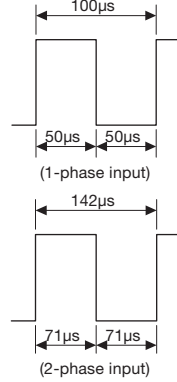

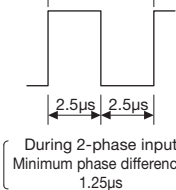

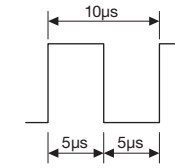

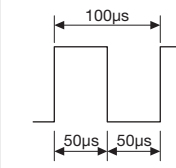

Notes

- Set the short bar of the setting pin located inside the conversion adapter to 24V during [24V] input, to 12V during [12V] input, and to 5V during [5V] input, in accordance with the input voltage of the phase A pulse input [ΦA], the phase B pulse input [ΦB], the preset input [PRE], and the function start input [FST]. Note that, at the time of factory shipment, all channels are set to [24V].
- QD62/QD62-H01/QD62-H02 does not have an A1SD61 limit switch output function. The OUT1 (TB11) to OUT8 (TB18) terminals therefore cannot be used. In a case where a substitution is to be made using a QD62 matching output function [CH1 EQU1 terminal (A6), CH1 EQU2 terminal (B6)], use the A1SD61 empty terminals [EQU1 terminal (TB9), EQU2 terminal (TB10)]. Note that specifications will differ, such as a fewer number of settings, etc.

- After setting the voltage setting pin, connect the external wiring.

[Specification comparison chart]

Specification		Model	MELSEC-AnS series		MELSEC-Q series		
		A1SD61		QD62			
Counting speed switch settings		Switched by setting pin		Switched by intelligent function module switch setting			
		50k side	10k side	200k (100k to 200kPPS)	100k (10k to 100kPPS)	10k (10kPPS or less)	
No. of channels		1 channel		2 channels			
Count input signal	Phase	1-phase input 2-phase input		1-phase input (1x/2x) 2-phase input (1x/2x/4x) CW/CCW input			
	Signal level (ΦA, ΦB)	5/12/24VDC 2 to 5mA					
Counter	Maximum counting speed	1-phase input: 50kPPS 2-phase input: 50kPPS	1-phase input: 10kPPS 2-phase input: 7kPPS	200kPPS (*1)	100kPPS (*1)	10kPPS (*1)	
	Counting range	32-bit signed binary -2147483648 to 2147483647					
	Model	UP/DOWN preset counter + Ring counter function					
	Minimum count pulse width (duty ratio: 50%)						
			(1- or 2-phase input)		(1-phase input)	(During 2-phase input Minimum phase difference: 1.25µs)	(During 2-phase input Minimum phase difference: 2.5µs)
Limit switch output	Comparison range	32-bit signed binary			-		
	Comparison result	NO contact operation dog ON address ≤ Count value ≤ Dog OFF address NC contact operation dog OFF address ≤ Count value ≤ Dog ON address			-		
Coincidence output	Comparison range	-			32-bit signed binary		
	Comparison result	-			Setting value < Count value Setting value = Count value Setting value > Count value		
External input	Preset	5/12/24VDC					
	Function start	2 to 5mA					
External output	Limit switch output	Transistor (open collector) output 12/24VDC, 0.1A/point, 0.8A/common			-		
	Coincidence output	-			Transistor (sink type) output 12/24VDC, 0.5A/point, 2A/common		
No. of I/O occupied points		32 points			16 points		
Connection method		20-point terminal block			40-pin connector		
Internal current consumption (5VDC)		0.35A			0.30A		

*1: The counting speed is affected by the pulse rise time and fall time t . The countable counting speed is as shown in the table below.

When a pulse with a large rise/fall time is counted, miscounting may occur. Caution is required.

Counting speed switch setting	Common to 1-phase input and 2-phase input		
Rise/Fall time	200k	100k	10k
$t=1.25\mu\text{s}$ or less	200kPPS	100kPPS	10kPPS
$t=2.5\mu\text{s}$ or less	100kPPS	100kPPS	10kPPS
$t=25\mu\text{s}$ or less	—	10kPPS	10kPPS
$t=500\mu\text{s}$	—	—	500PPS

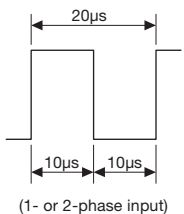

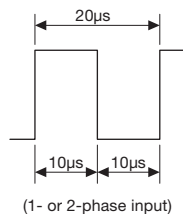

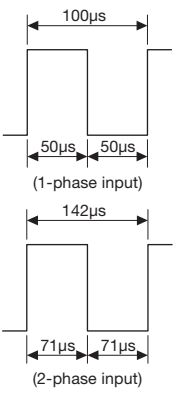

Notes

- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

Program precautions

- With A1SD61 and QD62, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The QD62 coincidence output function is used as a substitute for the A1SD61 limit switch output function. The sequence program needs to be changed.
- For QD62, use the CH1 input/output signals (X, Y) and buffer memory address. CH2 does not operate.
- The counting speed setting set using the setting pin with A1SD61 is set using the intelligent function module switch setting with QD62.

Model		MELSEC-AnS series		MELSEC-Q series
Specification		A1SD61		QD62-H01
Counting speed switch settings		Switched by setting pin		Switched by intelligent function module switch setting
		50k side	10k side	Fixed to 50k

*3: The counting speed is affected by the pulse rise time and fall time t . The countable counting speed is as shown in the table below. When a pulse larger than $t=500\mu\text{s}$ is counted, miscounting may occur. Caution is required.

Rise/Fall time	1-phase input	2-phase input
$t=5\mu\text{s}$	10kPPS	7kPPS
$t=500\mu\text{s}$	500PPS	250PPS

Note.

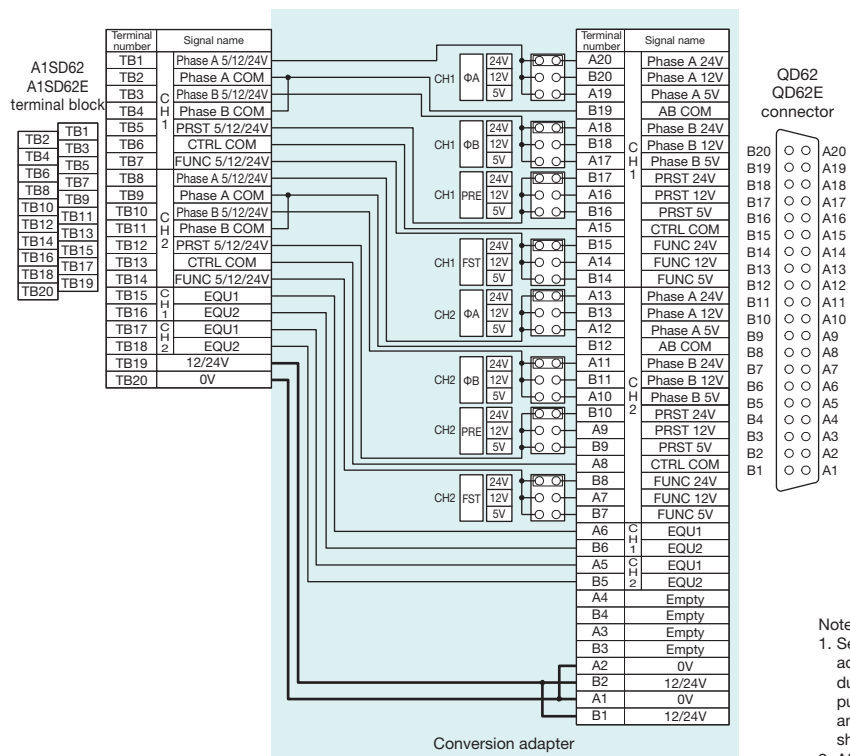

- For  areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

- With A1SD61 and QD62-H02, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The QD62-H02 coincidence output function is used as a substitute for the A1SD61 limit switch output function. The sequence program needs to be changed.
- For QD62-H02, use the CH1 input/output signals (X, Y) and buffer memory address. CH2 does not operate.
- The counting speed setting set using the setting pin with A1SD61 is set using the intelligent function module switch setting with QD62-H02.

2) ERNT-ASQTD62 Terminal block (20P)→Connector (40P)

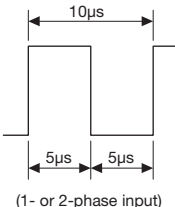

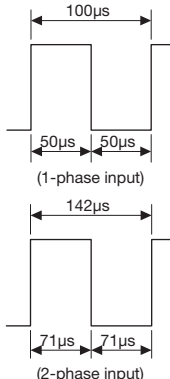

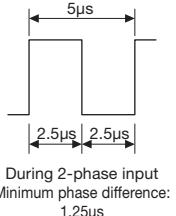

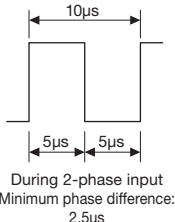

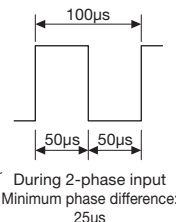

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQTD62	A1SD62	2 channels	QD62
	A1SD62E		QD62E

Notes

- Set the short bar of the setting pin located inside the conversion adapter to 24V during [24V] input, to 12V during [12V] input, and to 5V during [5V] input, in accordance with the input voltage of the phase A pulse input [ΦA], the phase B pulse input [ΦB], the preset input [PRE], and the function start input [FST]. Note that, at the time of factory shipment, all channels are set to [24V].
- After setting the voltage setting pin, connect the external wiring.

[Specification comparison chart]

Specification		Model	MELSEC-AnS series		MELSEC-Q series		
		A1SD62		QD62			
Counting speed switch settings		Switched by setting pin		Switched by intelligent function module switch setting			
		100k side	10k side	200k (100k to 200kPPS)	100k (10k to 100kPPS)	10k (10kPPS or less)	
No. of channels		2 channels					
Count input signal	Phase	1-phase input 2-phase input		1-phase input (1x/2x) 2-phase input (1x/2x/4x) CW/CCW input			
	Signal level (ΦA, ΦB)	5/12/24VDC 2 to 5mA					
Counter	Maximum counting speed	1-phase input: 100kPPS 2-phase input: 100kPPS	1-phase input: 10kPPS 2-phase input: 7kPPS	200kPPS (*1)	100kPPS (*1)	10kPPS (*1)	
	Counting range	24-bit binary 0 to 16777215		32-bit signed binary -2147483648 to 2147483647			
	Model	UP/DOWN preset counter + Ring counter function					
	Minimum count pulse width (duty ratio: 50%)						
			(1- or 2-phase input)		(1-phase input) (2-phase input)		
Coincidence output	Comparison range	24-bit binary		32-bit signed binary			
	Comparison result	Setting value < Count value Setting value = Count value Setting value > Count value					
External input	Preset	5/12/24VDC					
	Function start	2 to 5mA					
External output	Coincidence output	Transistor (sink type) output 12/24VDC, 0.5A/point, 2A/common					
No. of I/O occupied points		32 points		16 points			
Connection method		20-point terminal block		40-pin connector			
Internal current consumption (5VDC)		0.1A		0.30A			

*1: The counting speed is affected by the pulse rise time and fall time t . The countable counting speed is as shown in the table below.
When a pulse with a large rise/fall time is counted, miscounting may occur. Caution is required.

Counting speed switch setting	Common to 1-phase input and 2-phase input		
	200k	100k	10k
Rise/Fall time			
$t=1.25\mu s$ or less	200kPPS	100kPPS	10kPPS
$t=2.5\mu s$ or less	100kPPS	100kPPS	10kPPS
$t=25\mu s$ or less	—	10kPPS	10kPPS
$t=500\mu s$	—	—	500PPS

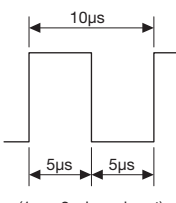

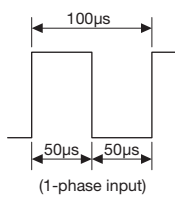

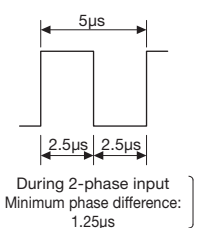

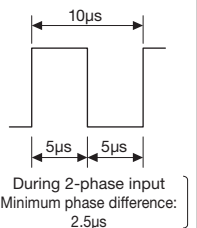

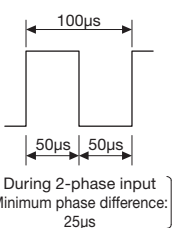

Notes

- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

●Program precautions

- With A1SD62 and QD62, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The counting speed setting set using the setting pin with A1SD62 is set using the intelligent function module switch setting with QD62.

Model		MELSEC-AnS series		MELSEC-Q series			
		A1SD62E		QD62E			
Specification		Switched by setting pin		Switched by intelligent function module switch setting			
Counting speed switch settings		100k side	10k side	200k (100k to 200kPPS)	100k (10k to 100kPPS)	10k (10kPPS or less)	
No. of channels		2 channels					
Count input signal	Phase	1-phase input 2-phase input		1-phase input (1x/2x) 2-phase input (1x/2x/4x) CW/CCW input			
	Signal level (ΦA, ΦB)	5/12/24VDC 2 to 5mA					
Counter	Maximum counting speed	1-phase input: 100kPPS 2-phase input: 100kPPS	1-phase input: 10kPPS 2-phase input: 7kPPS	200kPPS (*2)	100kPPS (*2)	10kPPS (*2)	
	Counting range	Binary with 24-bit code 0 to 16777215		32-bit signed binary -2147483648 to 2147483647			
	Model	UP/DOWN preset counter + Ring counter function					
	Minimum count pulse width (duty ratio: 50%)						
			(1- or 2-phase input)		(1-phase input)	(2-phase input)	
Coincidence output	Comparison range	24-bit binary		32-bit signed binary			
	Comparison result	Setting value < Count value Setting value = Count value Setting value > Count value					
External input	Preset	5/12/24VDC					
	Function start	2 to 5mA					
External output	Coincidence output	Transistor (source type) output 12/24VDC, 0.1A/point, 0.4A/common					
No. of I/O occupied points		32 points		16 points			
Connection method		20-point terminal block		40-pin connector			
Internal current consumption (5VDC)		0.1A		0.33A			

*2: The counting speed is affected by the pulse rise time and fall time t . The countable counting speed is as shown in the table below.
When a pulse with a large rise/fall time is counted, miscounting may occur. Caution is required.

Counting speed switch setting	Common to 1-phase input and 2-phase input		
Rise/Fall time	200k	100k	10k
$t=1.25\mu\text{s}$ or less	200kPPS	100kPPS	10kPPS
$t=2.5\mu\text{s}$ or less	100kPPS	100kPPS	10kPPS
$t=25\mu\text{s}$ or less	—	10kPPS	10kPPS
$t=500\mu\text{s}$	—	—	500PPS

Notes

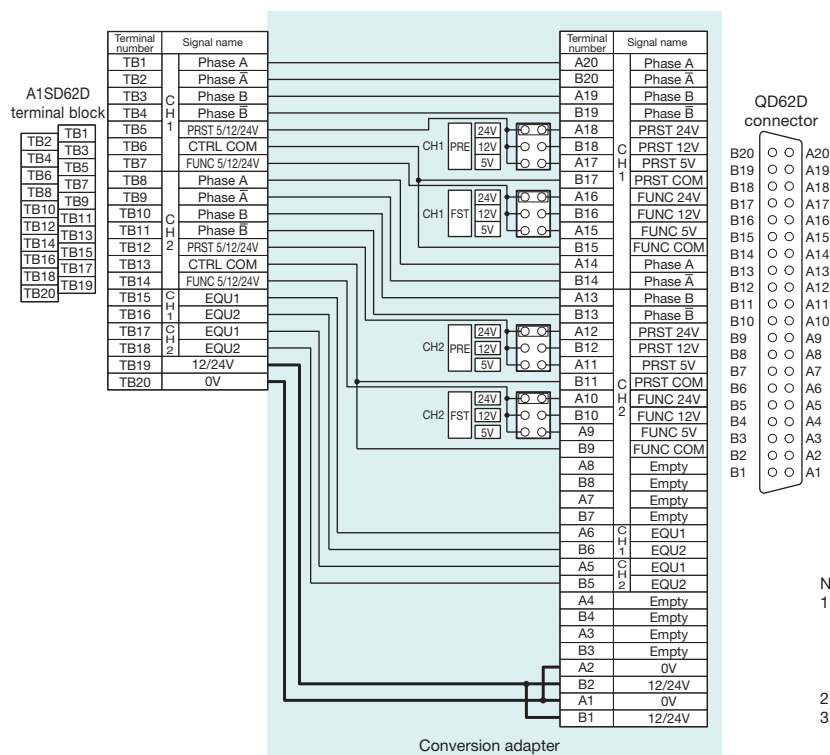

- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

- With A1SD62E and QD62E, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The counting speed setting set using the setting pin with A1SD62E is set using the intelligent function module switch setting with QD62E.

3) ERNT-ASQTD62D Terminal block (20P)→Connector (40P)

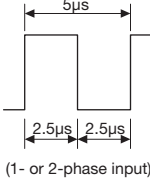

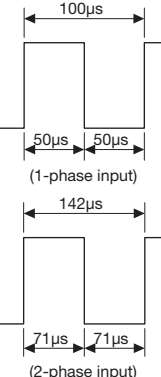

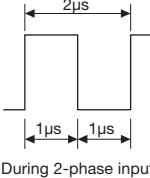

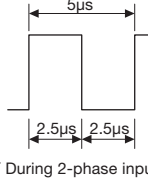

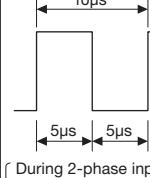

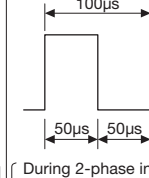

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQTD62D	A1SD62D	2 channels	QD62D

Notes

1. Set the short bar of the setting pin located inside the conversion adapter to 24V during [24V] input, to 12V during [12V] input, and to 5V during [5V] input, in accordance with the input voltage of the preset input [PRE] and the function start input [FST]. Note that, at the time of factory shipment, all channels are set to [24V].
2. After setting the voltage setting pin, connect the external wiring.
3. When the A1SD62D terminal block is used for sink load type, change the common type of the terminals for CTRL COM (TB6 and TB13) to negative.

[Specification comparison chart]

Model		MELSEC-AnS series		MELSEC-Q series			
		A1SD62D		QD62D			
Specification		Switched by setting pin		Switched by intelligent function module switch setting			
Counting speed switch settings		200k side	10k side	500k (200k to 500kPPS)	200k (100k to 200kPPS)	100k (10k to 100kPPS)	10k (10kPPS or less)

$t=25\mu\text{s}$ or less	—	—	10kPPS	10kPPS
$t=500\mu\text{s}$	—	—	—	500PPS

Notes

- For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

•Program precautions

- With A1SD62 and QD62D, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- The counting speed setting set using the setting pin with A1SD62D is set using the intelligent function module switch setting with QD62D.

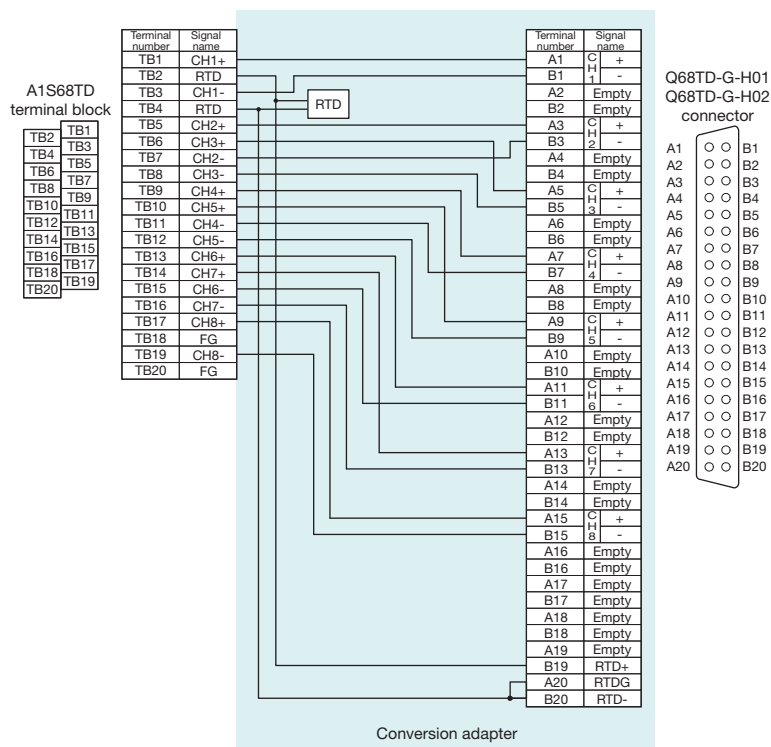

For Temperature Input Modules

1-slot type

1) ERNT-ASQT68TD-H01 Terminal block (20P)→Connector (40P)

ERNT-ASQT68TD-H02 Terminal block (20P)→Connector (40P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQT68TD-H01	A1S68TD	8 channels	Q68TD-G-H01
ERNT-ASQT68TD-H02			Q68TD-G-H02

Notes

1. The cold junction compensation resistor (RTD) is built into the conversion adapter. Be sure to remove the cold junction compensation resistor (RTD) connected to the A1S68TD terminal block (TB2, TB4).

2. Q68TD-G-H01/Q68TD-G-H02 does not have an FG terminal. The FG line connected to the FG terminals (TB18, TB20) on the MELSEC-AnS side, therefore, is not required. However, leaving the connection as is causes no problem because those wires are not connected in the conversion adapter.

[Specification comparison chart]

Specification		Model	MELSEC-AnS series	MELSEC-Q series	
			A1S68TD	Q68TD-G-H02	Q68TD-G-H01
Input temperature			0 to 1700°C	-270 to 1820°C	
Output	Temperature conversion value		16-bit signed binary (0 to 17000: Value to first decimal place × 10)	16-bit signed binary (-2700 to 18200: Value to first decimal place × 10)	
	Scaling value		16-bit signed binary (0 to 2000)	16-bit signed binary	
Thermocouple compliance standards			JIS C1602-1981	JIS C 1602-1995, IEC 60584-1 (1995), IEC 60584-2 (1982)	
Applicable thermocouple and conversion accuracy			See the table on the next page.	See the table on the next page.	
Cold junction compensation accuracy			±1.0°C		
Overall accuracy			Conversion accuracy + (Temperature characteristics × Operating ambient temperature change) + Cold junction compensation accuracy		
Resolution			B, R, S: 0.3°C K, E, J, T: 0.1°C	B, R, S, N: 0.3°C K, E, J, T: 0.1°C	
Conversion speed			400ms / 8 channels	640ms / 8 channels	320ms / 8 channels
No. of temperature input points			8 channels + Pt100 cold junction compensation / module		
Disconnection detection			Detected per channel		None (*1)
Isolation method	Between thermocouple input and programmable controller power supply		Transformer isolation		
	Between thermocouple input and channel				
	Between cold junction compensation and programmable controller power supply		Non-isolated		
No. of occupied I/O points			32 points	16 points	
Connection method			20-point terminal block	40-pin connector	
Internal current consumption (5VDC)			0.32A	0.65A	0.49A

*1: Q68TD-G-H01 is provided with a disconnection monitor function.

Notes

3. For [] areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
4. For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

	—	—	—	—	—	—	—

*2: When a value outside the stated measured temperature range is input from the thermocouple, the value is treated as the maximum/minimum value of the measured temperature range.
 *3: The temperature is measurable, but the accuracy is not guaranteed.

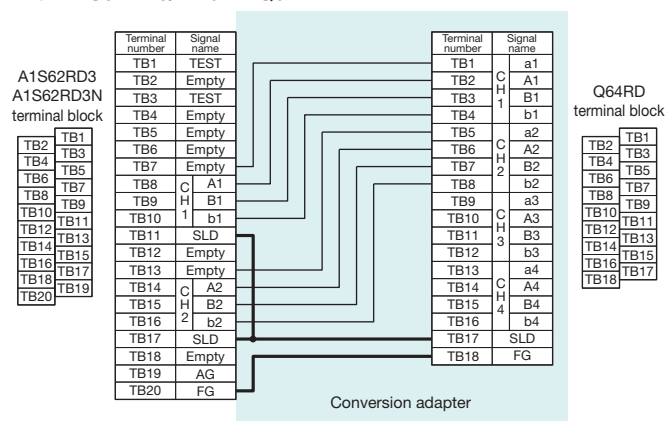

●Program precautions

- 1) With A1S68TD and Q68TD-G-H02/Q68TD-G-H01, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.
- 2) Q68TD-G-H01 has a faster conversion speed than A1S68TD. As a result, the possibility exists that noise not introduced in A1S68TD will be introduced as analog signals in Q68TD-G-H01. In such a case, use an averaging processing function to remove the impact of the noise
- 3) The thermocouple type set using a DIP switch with A1S68TD is set using the intelligent function module switch with Q68TD-G-H01/A68TD-G-H02.

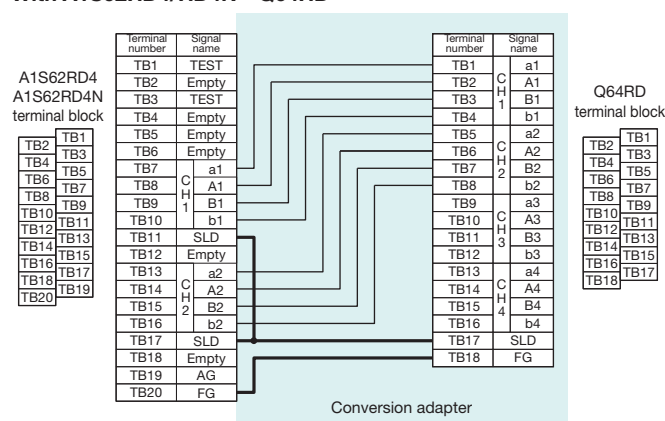

2) ERNT-ASQT62RD Terminal block (20P)→Terminal block (18P)

Conversion adapter model	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQT62RD	A1S62RD3	2 channels	Q64RD
	A1S62RD3N		
	A1S62RD4		
	A1S62RD4N		

With A1S62RD3/RD3N→Q64RD

With A1S62RD4/RD4N→Q64RD

Notes

- When replacing a four-line module (A1S62RD4, A1S62RD4N), be sure to remove the wiring between the terminals below.
 - When using 1 channel only.....Wiring between terminal b1 (TB10) ↔ terminal b2 (TB16)
 - When using 2 channels..... Wiring between terminal b1 (TB10) ↔ terminal a2 (TB13)
- Ground the FG terminal (TB18) of Q64RD using the FG terminal (TB20) of A1S62RD3/A1S62RD4/A1S62RD3N/A1S62RD4N.
- The Q64RD side does not have an AG terminal. The wiring connected to the AG terminal (TB19) on the MELSEC-AnS side, therefore, is not required. However, leaving the connection as is causes no problem because those wires are not connected in the conversion adapter.

If the wiring is left connected, the correct temperature cannot be measured.

[Specification comparison chart]

Specification	Model	MELSEC-AnS series				MELSEC-Q series
		A1S62RD3	A1S62RD4	A1S62RD3N	A1S62RD4N	Q64RD

*1: Maximum value of set range.

Notes

- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the specification comparison chart, refer to the user's manual of the module used. Note that the areas where the specifications differ between the MELSEC-AnS series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

●Program precautions

With A1S62RD3/A1S62RD4/A1S62RD3N/A1S62RD4N and Q64RD, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

Point

The compliance standards of the applicable platinum RTD are different from those of the MELSEC-AnS series module. Use an RTD that can be used with Q64RD.

MELSEC-AnS series module	RTD applicable to Q64RD		Platinum RTD	
	JPt100 (JIS C 1604-1981)		Pt100 (JIS C 1604-1989, DIN 43760-1980)	RTD not applicable to Q64RD
A1S62RD3/A1S62RD4	JPt100 (JIS C 1604-1981)		Pt100 (JIS C 1604-1989, DIN 43760-1980, IEC 751-am2)	Needs to be changed to the applicable Q64RD platinum RTD.

Notes

1. If the cold junction temperature compensation resistor (CJ) connected to the MELSEC-AnS series module terminal block (TB12, TB14) contacts a neighboring module, replace it with the cold junction temperature compensation resistor (CJ) provided with this product. If the cold junction temperature compensation resistor (CJ) does not contact a neighboring module, replacement with the cold junction temperature compensation resistor (CJ) provided with this product is not required.

	Proportional band (P)	—	0.1 to 1000.0%	0.0 to 1000.0% (0: 2-position control)
	Heating proportional band (Ph)	0.1 to 1000.0%	—	—
	Cooling proportional band (Pc)	—	—	—
	Integral time (I)	1 to 3600s	0 to 3600s (0: P control, PD control)	0 to 3600s (0: P control, PI control)
Derivative time (D)		0 to 3600s (0: PI control)	0 to 3600s (0: P control, PI control)	0 to 3600s (0: P control, PI control)
Target value setting range		Within the temperature range set by the used temperature sensor		
Cooling method setting		Air cooling / Water cooling		Air cooling / Water cooling / Linear
Transistor output	Output signal	ON/OFF pulse		
	Rated load voltage	10.2 to 30VDC		10 to 30VDC
	Maximum load current	0.1A/point, 0.4A/common		—
	Maximum inrush current	0.4A 10ms		—
	Leakage current at OFF	0.1mA or less		—
	Maximum voltage drop at ON	1.0VDC (TYP) 0.1A, 2.5VDC (MAX) 0.1 A		—
Response time		OFF→ON: 2ms or less ON→OFF: 2ms or less		
Isolation method		Between input and ground: Transformer insulation Between input and channel: Transformer insulation	Between input terminal and programmable controller power supply: Transformer insulation Between input channels: Transformer insulation	
No. of occupied I/O points		32 points		16 points
Connection method		20-point terminal block		18-point terminal block
Internal current consumption (5VDC)		0.19A	0.33A	0.29A

Table 4 Applicable Platinum RTDs

Platinum RTD type	°C		°F	
	Measured temperature range	Data resolution	Measured temperature range	Data resolution
Pt100	-200.0 to 600.0	0.1	-300 to 1100	1
	-200.0 to 200.0		-300.0 to 300.0	0.1
JPt100	-200.0 to 500.0	0.1	-300 to 900	1
	-200.0 to 200.0		-300.0 to 300.0	0.1

•Program precautions

With the AnS series module and Q series module, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

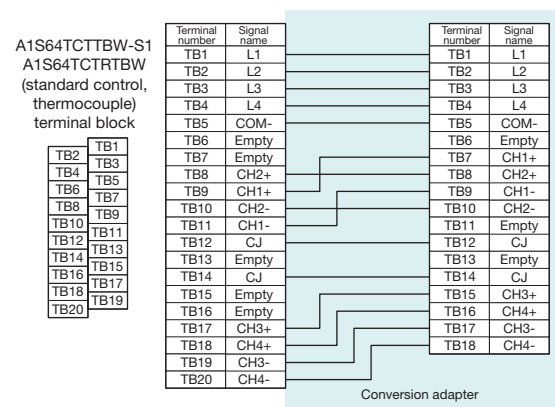

For Temperature Control Modules with Disconnection Detection Function

1-slot type + Disconnection detection connector conversion cable

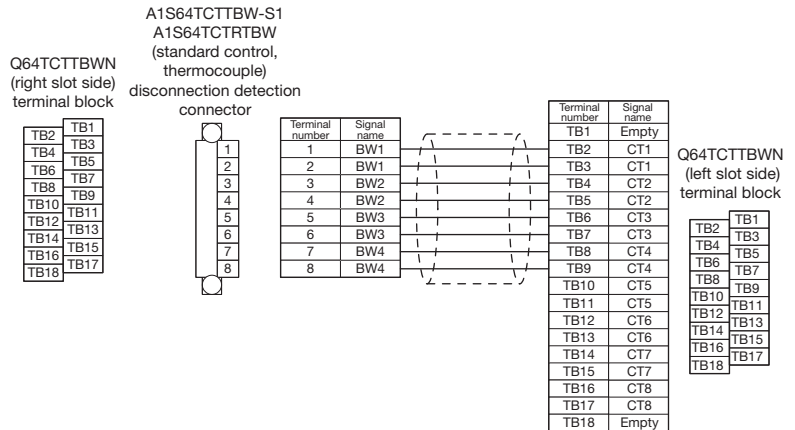

1) ERNT-ASQT64TCTTBW Terminal block (20P) + Connector (8P) → Terminal block (18P) × 2

Set model	Conversion adapter model	Disconnection detection connector conversion cable	MELSEC-AnS series module model	No. of channels	MELSEC-Q series module model
ERNT-ASQT64TCTTBW	ERNT-ASQT64TCTT	Yes	A1S64TCTTBW-S1	4 channels	Q64TCTTBWN
			A1S64TCTRTBW (standard control, thermocouple)		

Conversion adapter (ERNT-ASQT64TCTT)

Disconnection detection connector conversion cable

Notes

- Be sure to install the disconnection detection connector conversion cable on the left side and the conversion adapter on the right side of the MELSEC-Q series module.
Use of the module with the cable and adapter installed in the reverse causes MELSEC-Q series module damage.

[Specification comparison chart]

		Model	MELSEC-AnS series		MELSEC-Q series

A1S62TCRTBW-S2
A1S64TCRTBW
(heating and cooling control, platinum RTD)
disconnection detection connector

Notes

- Be sure to install the disconnection detection connector conversion cable on the left side and the conversion adapter on the right side of the MELSEC-Q series module. Use of the module with the cable and adapter installed in the reverse causes MELSEC-Q series module damage.

[Specification comparison chart]

Model		MELSEC-AnS series		MELSEC-Q series	
Specification		A1S62TCRTBW-S2	A1S64TCRTBW (Under heating and cooling control)	Q64TCRTBWN (Under heating and cooling control)	
Control output		Transistor output

JPt100	-200.0 to 500.0	0.1	-300 to 900	1
	-200.0 to 200.0		-300.0 to 300.0	0.1

•Program precautions

With the AnS series module and Q series module, the input/output signals (X, Y) and buffer memory address assignments differ. The sequence program needs to be changed.

Base Adapter

Specifications

The base adapter allows installation of the MELSEC-Q series using the mounting holes of the MELSEC-AnS series (Additional drilling of holes is not required). With the ERNT-ASQB□□N-S1 base adapter, the main base unit and the QA extension base unit QA1S51B can be both installed.

Base adapter model	Specifications		Remark
	MELSEC-AnS series compatible module	MELSEC-Q series compatible module	
ERNT-ASQB38N	A1S38B/A1S38HB/A1S38HBEU	Q38B	When using Q7BAT-SET, mount Q7BAT-SET to the CPU module with the CPU module (prior to Q7BAT-SET mounting) mounted to the base adapter installed.

ERNT-ASQB33N-S1	A1S33B	Q33B		

Mounting Dimensions

When replacing the module using the ERNT-ASQB□□N base adapter

- The base adapter mounting holes (four) share the same dimensions as those for the MELSEC-AnS series base unit. There is no need to drill additional holes on the control panel.
- When replacing the MELSEC-AnS series with the MELSEC-Q series, the slot positions where the module is mounted are different. Adjust the wiring length prior to use.

Q52B	127.5	A1S52B	155

Restriction :When installing the MELSEC-Q series without changing the position of the DIN rail, the lower dimension increases by 4mm.

Usage Precautions

The conversion adapter is used to compensate the difference of the pin assignment when the MELSEC-AnS series module is replaced with the MELSEC-Q series module.

When replacing MELSEC-AnS series with MELSEC-Q series, be sure to refer to the manual of each module of the MELSEC-Q series to verify the differences in performance, function, CPU input/output signals, buffer memory addresses, and the like prior to use.

We also recommend that you refer to the “Transition from MELSEC-AnS/QnAS (Small Type) Series to Q Series Handbook” published by Mitsubishi Electric.

Module Width

- 1) The module width dimension is smaller (34.5 mm→ 27.4 mm) and the wiring area is smaller, requiring verification during mounting.

- 2) If the wiring interferes with a mounted module, lift the wiring forward, etc., so that there is no interference.

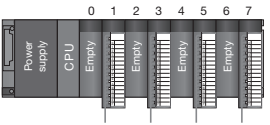

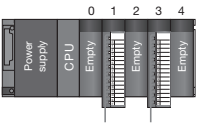

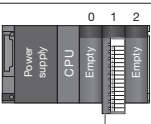

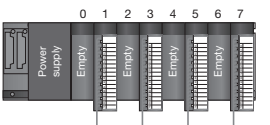

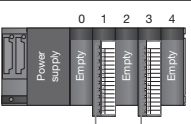

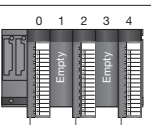

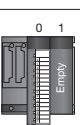

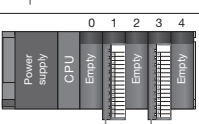

- 3) If interference still occurs even when you lift the wiring, open up a slot to secure a space for wiring.

Mount a connector cover (accessory) or blank cover module (QG60) to prevent dust from entering the connector of a spare space where a module is not mounted.

- 4) In consideration of wiring areas, the number of replaceable modules is as follows.

MELSEC-AnS series base unit model	MELSEC-Q series base unit model	Replacement	
		Mounting method	No. of replaceable modules
A1S38B A1S38HB A1S38HBEU	Q38B		4 modules
A1S35B	Q35B		2 modules
A1S33B A1S32B	Q33B		1 modules
A1S68B A1S58B	Q68B		4 modules
A1S65B	Q65B		2 modules
A1S55B	Q55B		3 modules
A1S52B	Q52B		1 modules
A1SJCPU A1SJCPU-S3 A1SJHCPU	Q00JCPU Q00UJCPU		2 modules

- 5) If replacement is not possible based on 2) or 3) or 4) on the left, investigate using the Mitsubishi Electric AnS-size Q series large type base unit. ➡ 3-2

Depth / Height

When using the base adapter

The depth increases by 25.5 to 87.5 mm.

The height of ERNT-ASQT68AD is 11 mm larger toward the lower side, and the height of ERNT-ASQT6□TC□□BW is 1.9 mm larger toward the lower side.

Terminal Block Cover

The terminal block cover of the MELSEC-AnS series is larger than the MELSEC-Q series module width, and therefore needs to be replaced with the terminal block cover provided with the conversion adapter (excluding 2-slot types).

Base Adapter / Conversion Adapter DIN Rail Mounting Bracket

When using the base adapter with a support flange, the base adapter or conversion adapter DIN rail mounting bracket is required. Note that when mounting the MELSEC-Q series base unit to a DIN rail, the DIN adapter manufactured by Mitsubishi Electric is separately required.

Memo

SYSMAC C Series ⇨ MELSEC-Q Series Upgrade Tool

Upgrading from the SYSMAC C Series to the MELSEC-Q Series

■ Simplifies replacement with the MELSEC-Q series

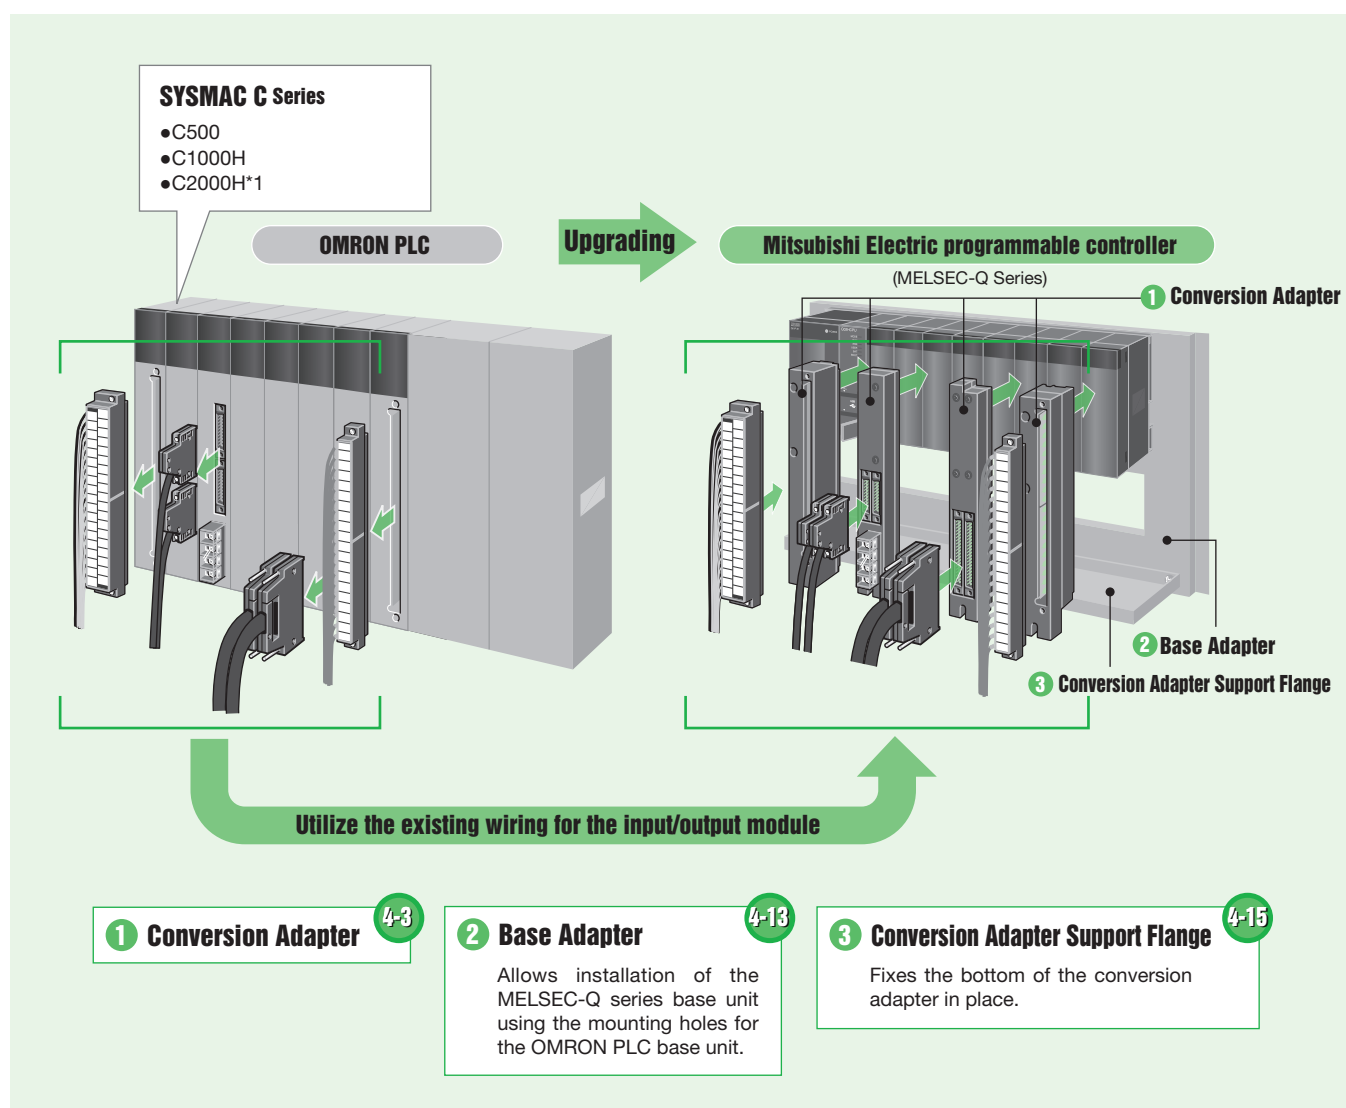

The upgrade tool makes it easy to replace the OMRON SYSMAC C series programmable controller with the Mitsubishi Electric MELSEC-Q series.

■ Significantly shortens the time required for input and output module wiring, and significantly reduces wiring errors

- The upgrade tool allows you to connect the wiring connected to the SYSMAC C series input/output modules as is to the MELSEC-Q series using a conversion adapter. (Some power supply and common terminal connection changes required.)
- By using a base adapter, the MELSEC-Q series can be installed using the SYSMAC C series mounting holes. (Additional drilling of holes is not required.)

Product Overview

This upgrade tool comprises a "conversion adapter" that changes the existing wiring connected to OMRON PLC SYSMAC C series input and output modules to wiring applicable to the modules of the MELSEC-Q series, a "conversion adapter support flange" for fixing the bottom of the conversion adapter in place, a "base adapter" that makes it possible to install the MELSEC-Q series base unit using the mounting holes of the SYSMAC C series base unit, and a "program converter" for converting the sequence program.

*1 The conversion adapters are only for the C500.

ERNT-QF12	12-slot conversion adapter support flange	A conversion adapter support flange is always required with conversion adapter use.	4-15
ERNT-QF8	8-slot conversion adapter support flange		
ERNT-QF5	5-slot conversion adapter support flange		

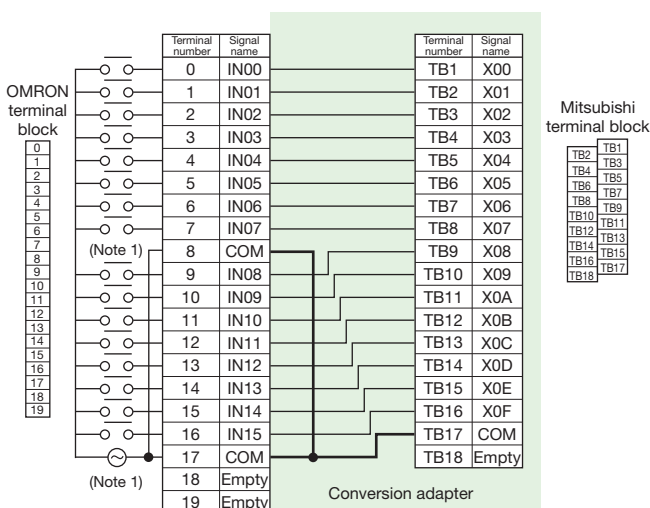

Conversion Adapter

Specifications

1-slot type

1) ERNT-CQTX121 Terminal block (20p)→Terminal block (18p)

Conversion adapter model	SYSMAC C series module model	No. of input points	MELSEC-Q series module model
ERNT-CQTX121	C500-IA121	16 points	QX10

[Input module specification comparison chart]

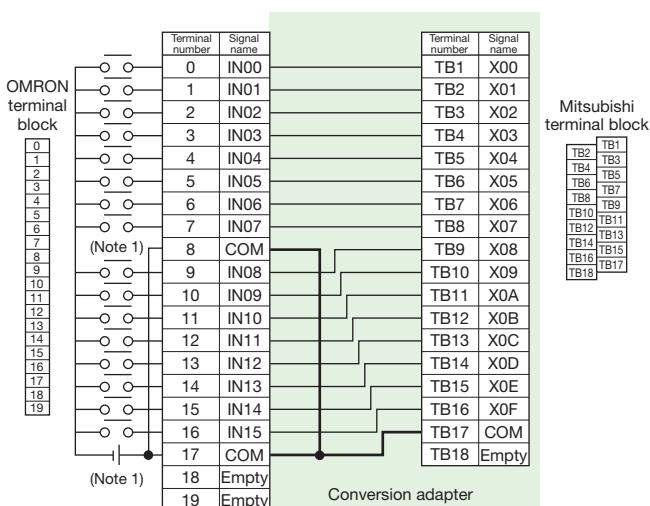

Specification	Model	SYSMAC C series	MELSEC-Q series
		C500-IA121	QX10
No. of input points		16 points	16 points
Input voltage		100 to 120VAC	100 to 120VAC
Input current		10mA/100VAC	Approx. 8mA/100VAC
Operating voltage	ON voltage	60VAC or more	80VAC or more
	OFF voltage	20VAC or less	30VAC or less
Input response time	ON response time	35ms or less	15ms or less
	OFF response time	55ms or less	20ms or less
Isolation method		Photocoupler isolation	Photocoupler isolation
External connection		20P terminal block	18P terminal block
No. of points per common (Note 1)		8 points (2 circuits)	16 points (1 circuit)
Internal current consumption		180mA or less	50mA

Notes

- In a case where the number of points per common changes from eight (two circuits) to 16 and the terminal numbers 8 and 17 on the SYSMAC C series side are used separately, a wiring change is required.
- For  areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used.

2) ERNT-CQTX112213 Terminal block (20p)→Terminal block (18p)

Conversion adapter model	SYSMAC C series module model	No. of input points	MELSEC-Q series module model
ERNT-CQTX112213	C500-ID112	16 points	QX70
	C500-ID213		QX40, QX40-S1

[Input module specification comparison chart]

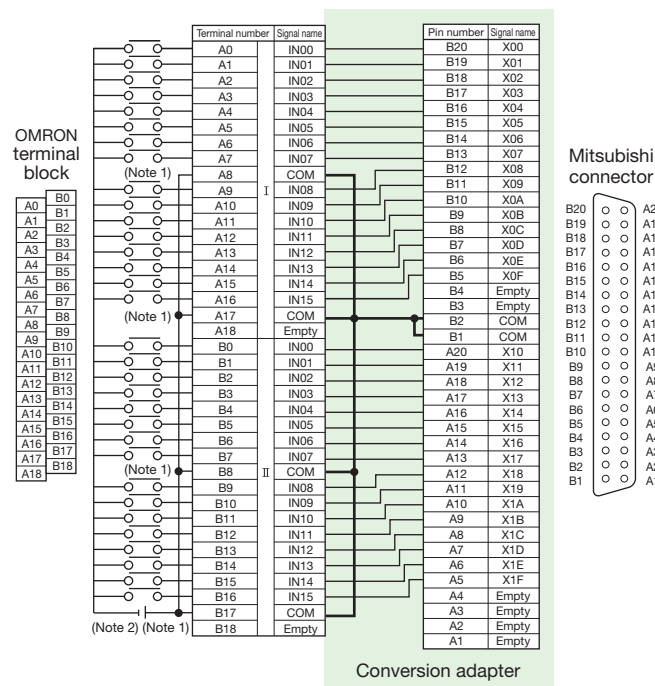

Specification	Model	SYSMAC C series	MELSEC-Q series
		C500-ID112 (Sink type)	QX70 (Sink/Source common type)
No. of input points		16 points	16 points
Input voltage		5 to 12VDC	5VDC/12VDC
Input current		16mA/12VDC	Approx. 3.3mA/12VDC
Operating voltage	ON voltage	4VDC or more	3.5VDC or more
	OFF voltage	1.5VDC or less	1VDC or less
Input response time	ON response time	1.5ms or less	1/5/10/20/70ms or less
	OFF response time	1.5ms or less	1/5/10/20/70ms or less
Isolation method		Photocoupler isolation	Photocoupler isolation
External connection		20P terminal block	18P terminal block
No. of points per common		8 points (2 circuits)	16 points (1 circuit)
Internal current consumption		10mA or less	55mA

Specification	Model	SYSMAC C series	MELSEC-Q series	
		C500-ID213 (Sink type)	QX40 (Sink type)	QX40-S1 (Sink type)
No. of input points		16 points	16 points	16 points
Input voltage		12 to 24VDC	24VDC	24VDC
Input current		10mA/24VDC	Approx. 4mA/24VDC	Approx. 6mA/24VDC
Operating voltage	ON voltage	10.2VDC or more	19VDC or more	19VDC or more
	OFF voltage	3VDC or less	11VDC or less	11VDC or less
Input response time	ON response time	1.5ms or less	1/5/10/20/70ms or less	0.1/0.2/0.4/0.6/1ms
	OFF response time	1.5ms or less	1/5/10/20/70ms or less	0.1/0.2/0.4/0.6/1ms
Isolation method		Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
External connection		20P terminal block	18P terminal block	18P terminal block
No. of points per common (Note 1)		8 points (2 circuits)	16 points (1 circuit)	16 points (1 circuit)
Internal current consumption		20mA or less	50mA	60mA

Notes

- In a case where the number of points per common changes from eight (two circuits) to 16 and the terminal numbers 8 and 17 on the SYSMAC C series side are used separately, a wiring change is required.
- For  areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used.

Conversion adapter model	SYSMAC C series module model	No. of input points	MELSEC-Q series module model
ERNT-CQTX215218	C500-ID215	32 points	QX41

External connection		24P connector × 2	40P connector	40P connector
No. of points per common (Note 1)		8 points (4 circuits)	32 points (1 circuit)	32 points (1 circuit)
Internal current consumption		200mA or less	75mA	75mA

Model		SYSMAC C series	MELSEC-Q series
		C500-ID501CN (Sink/Source common type)	QX71 (Sink/Source common type)
Specification			
No. of input points		32 points	32 points
Input voltage		5VDC	5VDC/12VDC
Input current		3.5mA/5VDC	Approx. 1.2mA/5VDC
Operating voltage	ON voltage	3VDC or more	3.5VDC or more
	OFF voltage	1VDC or less	1VDC or less
Input response time	ON response time	1.5ms or less	1/5/10/20/70ms or less
	OFF response time	1.5ms or less	1/5/10/20/70ms or less
Isolation method		Photocoupler isolation	Photocoupler isolation
External connection		24P connector x 2	40P connector
No. of points per common (Note 1)		8 points (4 circuits)	32 points (1 circuit)
Internal current consumption		200mA or less	70mA

1. In a case where the number of points per common changes from eight (four circuits) to 32 and the terminal numbers A9 and B9 of I as well as A9 and B9 of II on the SYSMAC C series side are used separately, a wiring change is required.
2. C500-ID218CN → QX41/QX41-S1 conversion is sink type compatible only.
3. For ☐ areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
4. For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used.

5) ERNT-CQCX114219 Connector (40P) × 2 → Connector (40P) × 2

Conversion adapter model	SYSMAC C series module model	No. of input points	MELSEC-Q series module model
ERNT-CQCX114219	C500-ID114	64 points	QX72
	C500-ID219		QX42, QX42-S1, QX82

[Input module specification comparison chart]

Model		SYSMAC C series	MELSEC-Q series
Specification		C500-ID114 (Sink/Source common type)	QX72 (Sink/Source common type)
No. of input points		64 points	64 points
Input voltage		12VDC	5/12VDC
Input current		7mA/12VDC	Approx. 3.3mA/12VDC
Operating voltage	ON voltage	8VDC or more	3.5VDC or more
	OFF voltage	3VDC or less	1VDC or less
Input response time	ON response time	1.5ms or less	1/5/10/20/70ms or less
	OFF response time	1.5ms or less	1/5/10/20/70ms or less
Isolation method		Photocoupler isolation	Photocoupler isolation
External connection		40P connector × 2	40P connector × 2
No. of points per common (Note 1)		8 points (8 circuits)	32 points (2 circuits)
Internal current consumption		340mA or less	85mA

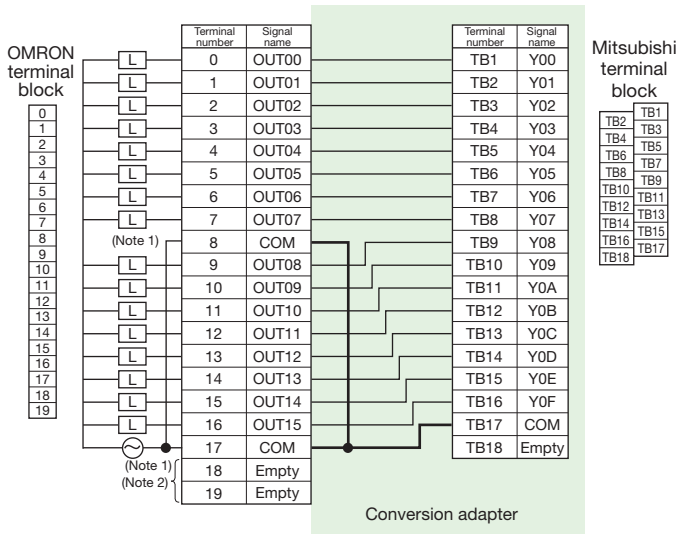

Model		SYSMAC C series	MELSEC-Q series		
Specification		C500-ID219 (Sink/Source common type)	QX42 (Sink type)	QX42-S1 (Sink type)	QX82 (Source type)
No. of input points		64 points	64 points	64 points	64 points
Input voltage		24VDC	24VDC	24VDC	24VDC
Input current		7mA/24VDC	Approx. 4mA/24VDC	Approx. 4mA/24VDC	Approx. 4mA/24VDC
Operating voltage	ON voltage	16VDC or more	19VDC or more	19VDC or more	19VDC or more
	OFF voltage	5VDC or less	11VDC or less	9.5VDC or less	11VDC or less
Input response time	ON response time	1.5ms or less	1/5/10/20/70ms or less	0.1/0.2/0.4/0.6/1ms	1/5/10/20/70ms or less
	OFF response time	1.5ms or less	1/5/10/20/70ms or less	0.1/0.2/0.4/0.6/1ms	1/5/10/20/70ms or less
Isolation method		Photocoupler isolation	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
External connection		40P connector × 2	40P connector × 2	40P connector × 2	40P connector × 2
No. of points per common (Note 1)		8 points (8 circuits)	32 points (2 circuits)	32 points (2 circuits)	32 points (2 circuits)
Internal current consumption		340mA or less	90mA	90mA	90mA

Notes

- In a case where the number of points per common changes from eight (eight circuits) to 32 (two circuits) and the terminal numbers A9 and A18 of I, B9 and B18 of II, A9 and A18 of III, and B9 and B18 of IV on the SYSMAC C series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used.

6) ERNT-CQTY221 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	SYSMAC C series module model	No. of output points	MELSEC-Q series module model
ERNT-CQTY221	C500-OC221	16 points	QY10

[Output module specification comparison chart]

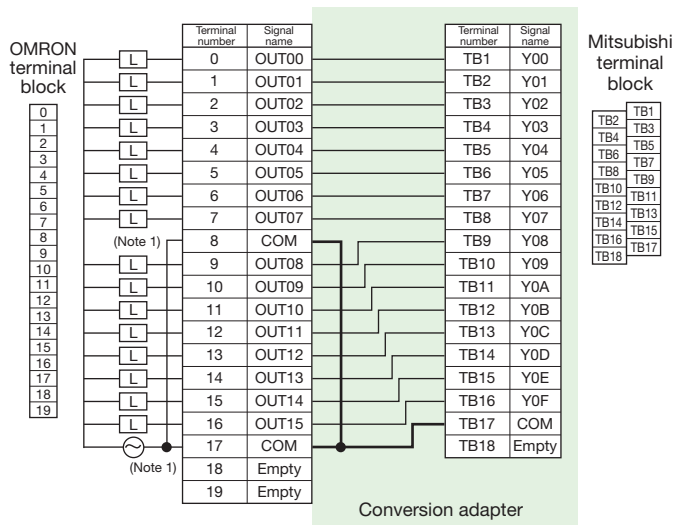

Specification	Model	
	SYSMAC C series	MELSEC-Q series
	C500-OC221	QY10
No. of output points	16 points	16 points
Switching capacity	250VAC/2A (COSΦ=1) 250VAC/0.5A (COSΦ=0.4) 24VDC/2A (8A/common, 16A/module)	240VAC/2A (COSΦ=1) 24VDC/2A (Resistance load) (8A/common)
Output response time	ON response time	15ms or less
	OFF response time	10ms or less
External connection	20P terminal block	18P terminal block
No. of points per common (Note 1)	8 points (2 circuits)	16 points (1 circuit)
Leakage current	—	—
Surge suppressor	No	No
Fuse	No	No
Internal current consumption	100mA or less	430mA

Notes

- In a case where the number of points per common changes from eight (two circuits) to 16 (one circuit) and the terminal numbers 8 and 17 on the SYSMAC C series side are used separately, a wiring change is required.
- The external power supply connected to terminal numbers 18 and 19 on the SYSMAC C series side is not required.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used.

7) ERNT-CQTY226 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	SYSMAC C series module model	No. of output points	MELSEC-Q series module model
ERNT-CQTY226	C500-OA121	16 points	QY22
	C500-OA222

No. of output points	16 points	16 points	16 points
Switching capacity	12 to 24VDC/2.1A (8A/common, 16A/module)	12 to 24VDC/0.1A (1.6A/common)	12 to 24VDC/0.5A (4A/common)
Output response time	ON response time	0.2ms or less	1ms or less
	OFF response time	0.4ms or less	1ms or less
External connection	20P terminal block	18P terminal block	18P terminal block
No. of points per common (Note 1)	8 points (2 circuits)	16 points (1 circuit)	16 points (1 circuit)
Leakage current	0.1mA or less	0.1mA or less	0.1mA or less
Surge suppressor	Yes	Yes	Yes
Fuse	Yes	No (with protection)	Yes
Internal current consumption	160mA or less	65mA	80mA

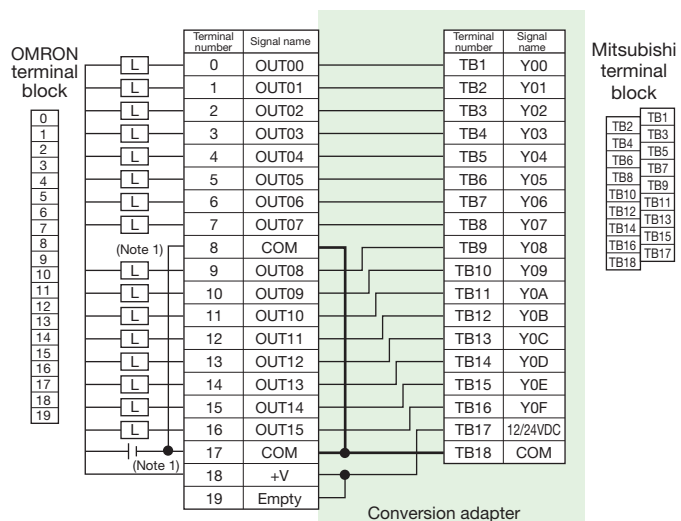

Model	SYSMAC C series	MELSEC-Q series	
Specification	C500-OD217	QY40P	QY50
No. of output points	16 points	16 points	16 points
Switching capacity	12 to 24VDC/1A (4A/common, 5A/module)	12 to 24VDC/0.1A (1.6A/common)	12 to 24VDC/0.5A (4A/common)
Output response time	ON response time	0.2ms or less	1ms or less
	OFF response time	0.3ms or less	1ms or less
External connection	20P terminal block	18P terminal block	18P terminal block
No. of points per common (Note 1)	8 points (2 circuits)	16 points (1 circuit)	16 points (1 circuit)
Leakage current	0.1mA or less	0.1mA or less	0.1mA or less
Surge suppressor	Yes	Yes	Yes
Fuse	Yes	No (with protection)	Yes
Internal current consumption	160mA or less	65mA	80mA

Notes

- In a case where the number of points per common changes from eight (two circuits) to 16 and the terminal numbers 8 and 17 as well as 18 and 19 on the SYSMAC C series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the input module specification comparison chart, refer to the user's manual of the input module used.

9) ERNT-CQTY411 Terminal block (20P)→Terminal block (18P)

Conversion adapter model	SYSMAC C series module model	No. of output points	MELSEC-Q series module model
ERNT-CQTY411	C500-OD411	16 points	QY40P, QY50

[Output module specification comparison chart]

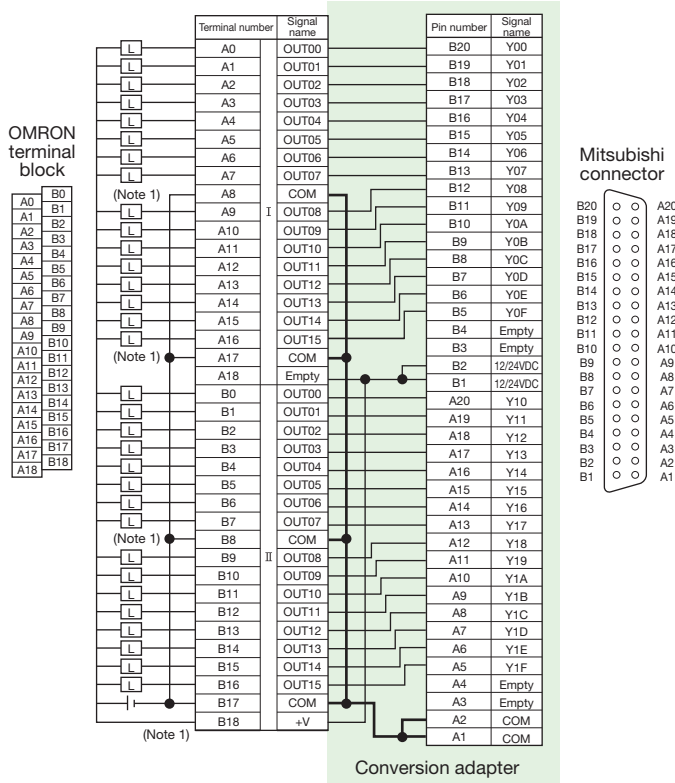

Model	SYSMAC C series	MELSEC-Q series	
Specification	C500-OD411	QY40P	QY50
No. of output points	16 points	16 points	16 points
Switching capacity	12 to 48VDC/1A (4A/common, 5A/module)	12 to 24VDC/0.1A (1.6A/common)	12 to 24VDC/0.5A (4A/common)
Output response time	ON response time	0.2ms or less	1ms or less
	OFF response time	0.3ms or less	1ms or less
External connection	20P terminal block	18P terminal block	18P terminal block
No. of points per common (Note 1)	16 points (1 circuit)	16 points (1 circuit)	16 points (1 circuit)
Leakage current	0.1mA or less	0.1mA or less	0.1mA or less
Surge suppressor	No	Yes	Yes
Fuse	Yes	No (with protection)	Yes
Internal current consumption	160mA or less	65mA	80mA

Notes

- Be sure to use terminal number 19 of the SYSMAC C series terminal block as an empty terminal (not connected). (Reason: Terminal numbers 18 and 19 are short-circuited inside the conversion adapter.)
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used.

10) ERNT-CQTY412 Terminal block (38P)→Connector (40P)

Conversion adapter model	SYSMAC C series module model	No. of output points	MELSEC-Q series module model
ERNT-CQTY412	C500-OD412	32 points	QY41P

[Output module specification comparison chart]

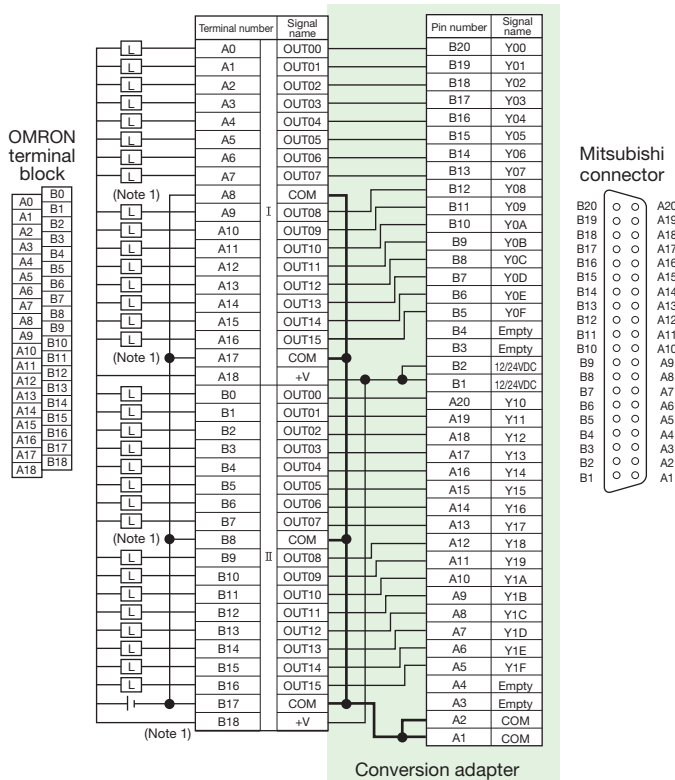

Model	SYSMAC C series	MELSEC-Q series
Specification	C500-OD412	QY41P
No. of output points	32 points	32 points
Switching capacity	12 to 48VDC / 0.3A (4.8A/module)	12 to 24VDC / 0.1A (2A/common)
Output response time	ON response time: 0.2ms or less OFF response time: 0.3ms or less	1ms or less
External connection	38P terminal block	40P connector
No. of points per common (Note 1)	32 points (1 circuit)	32 points (1 circuit)
Leakage current	0.1mA or less	0.1mA or less
Surge suppressor	No	Yes
Fuse	Yes	No (with protection)
Internal current consumption	230mA or less	105mA

Notes

- Be sure to use terminal number A18 of the SYSMAC C terminal block series as an empty terminal (not connected). (Reason: Terminal numbers A18 and B18 are short-circuited inside the conversion adapter.)
- For  areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used.

11) ERNT-CQTY414218 Terminal block (38P)→Connector (40P)

Conversion adapter model	SYSMAC C series module model	No. of output points	MELSEC-Q series module model
ERNT-CQTY414218	C500-OD414 C500-OD218	32 points	QY41P

[Output module specification comparison chart]

Model	SYSMAC C series	MELSEC-Q series
Specification	C500-OD414	QY41P
No. of output points	32 points	32 points
Switching capacity	12 to 48VDC / 0.3A (2.4A/common, 4.8A/module)	12 to 24VDC / 0.1A (2A/common)
Output response time	ON response time: 0.2ms or less OFF response time: 0.3ms or less	1ms or less
External connection	38P terminal block	40P connector
No. of points per common (Note 1)	16 points (2 circuits)	32 points (1 circuit)
Leakage current	0.1mA or less	0.1mA or less
Surge suppressor	No	Yes
Fuse	No	No (with protection)
Internal current consumption	230mA or less	105mA

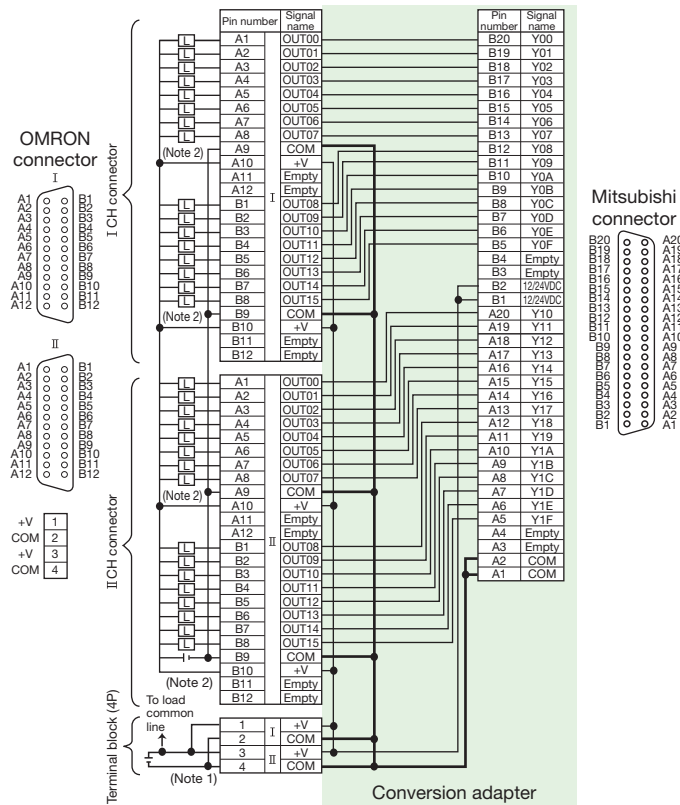

Model	SYSMAC C series	MELSEC-Q series
Specification	C500-OD218	QY41P
No. of output points	32 points	32 points
Switching capacity	12 to 24VDC / 0.3A (2.4A/common, 4.8A/module)	12 to 24VDC / 0.1A (2A/common)
Output response time	ON response time: 0.2ms or less OFF response time: 0.3ms or less	1ms or less
External connection	38P terminal block	40P connector
No. of points per common (Note 1)	16 points (2 circuits)	32 points (1 circuit)
Leakage current	0.1mA or less	0.1mA or less
Surge suppressor	Yes	Yes
Fuse	Yes	No (with protection)
Internal current consumption	230mA or less	105mA

Notes

- In a case where the number of points per common changes from 16 (two circuits) to 32 (one circuit) and the terminal numbers A8, A17, B8, and B17 as well as A18 and B18 on the SYSMAC C series side are used separately, a wiring change is required.
- For  areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used.

12) ERNT-CQCY415 Connector (24P) × 2 + Terminal block (4P) → Connector (40P)

Conversion adapter model	SYSMAC C series module model	No. of output points	MELSEC-Q series module model
ERNT-CQCY415	C500-OD415CN	32 points	QY41P

[Output module specification comparison chart]

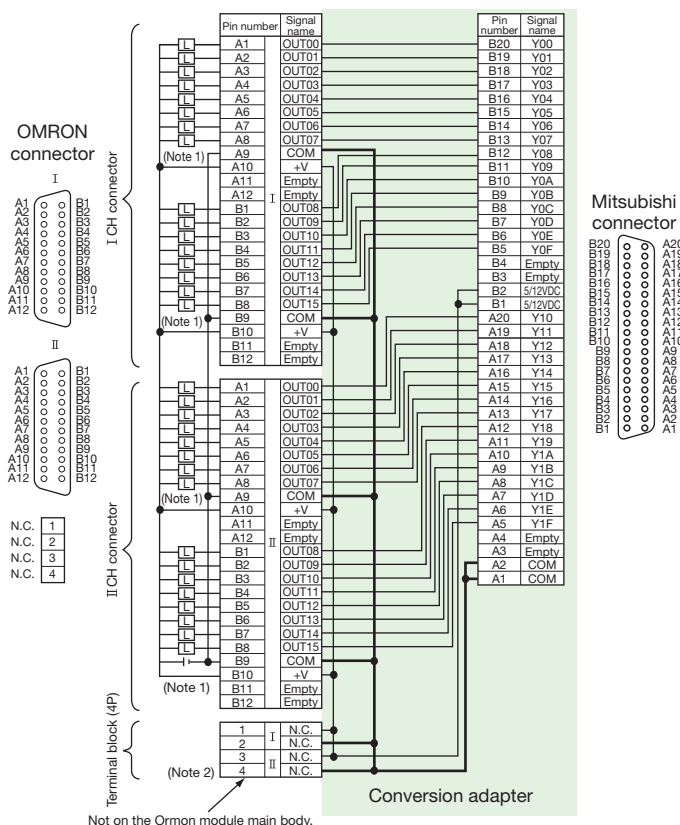

Specification	Model	SYSMAC C series	MELSEC-Q series
		C500-OD415CN	QY41P
No. of output points		32 points	32 points
Switching capacity		12 to 48VDC / 0.3A (2.4A/common, 4.8A/module)	12 to 24VDC / 0.1A (2A/common)
Output response time	ON response time	0.2ms or less	1ms or less
	OFF response time	0.3ms or less	1ms or less
External connection		24P connector × 2 + Terminal block	40P connector
No. of points per common		16 points (2 circuits)	32 points (1 circuit)
Leakage current		0.1mA or less	0.1mA or less
Surge suppressor		No	Yes
Fuse		No	No (with protection)
Internal current consumption		230mA or less	105mA

Notes

- In a case where the wiring of the power common line when C500-OD415CN is used uses a terminal block (4P), the power supply common line needs to be removed from the terminal block and rewired to the terminal block (4P) of this conversion adapter.
- In a case where the number of points per common changes from 16 (two circuits) to 32 (one circuit) and the pin numbers A9 and B9 of I, A9 and B9 of II, A10 and B10 of I, A10 and B10 of II, and 1 and 3 as well as 2 and 4 of the terminal block (4P) on the SYSMAC-C series side are used separately, a wiring change is required.
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used.

13) ERNT-CQCY501 Connector (24P) × 2 + Terminal block (4P) → Connector (40P)

Conversion adapter model	SYSMAC C series module model	No. of output points	MELSEC-Q series module model
ERNT-CQCY501	C500-OD501CN	32 points	QY71

[Output module specification comparison chart]

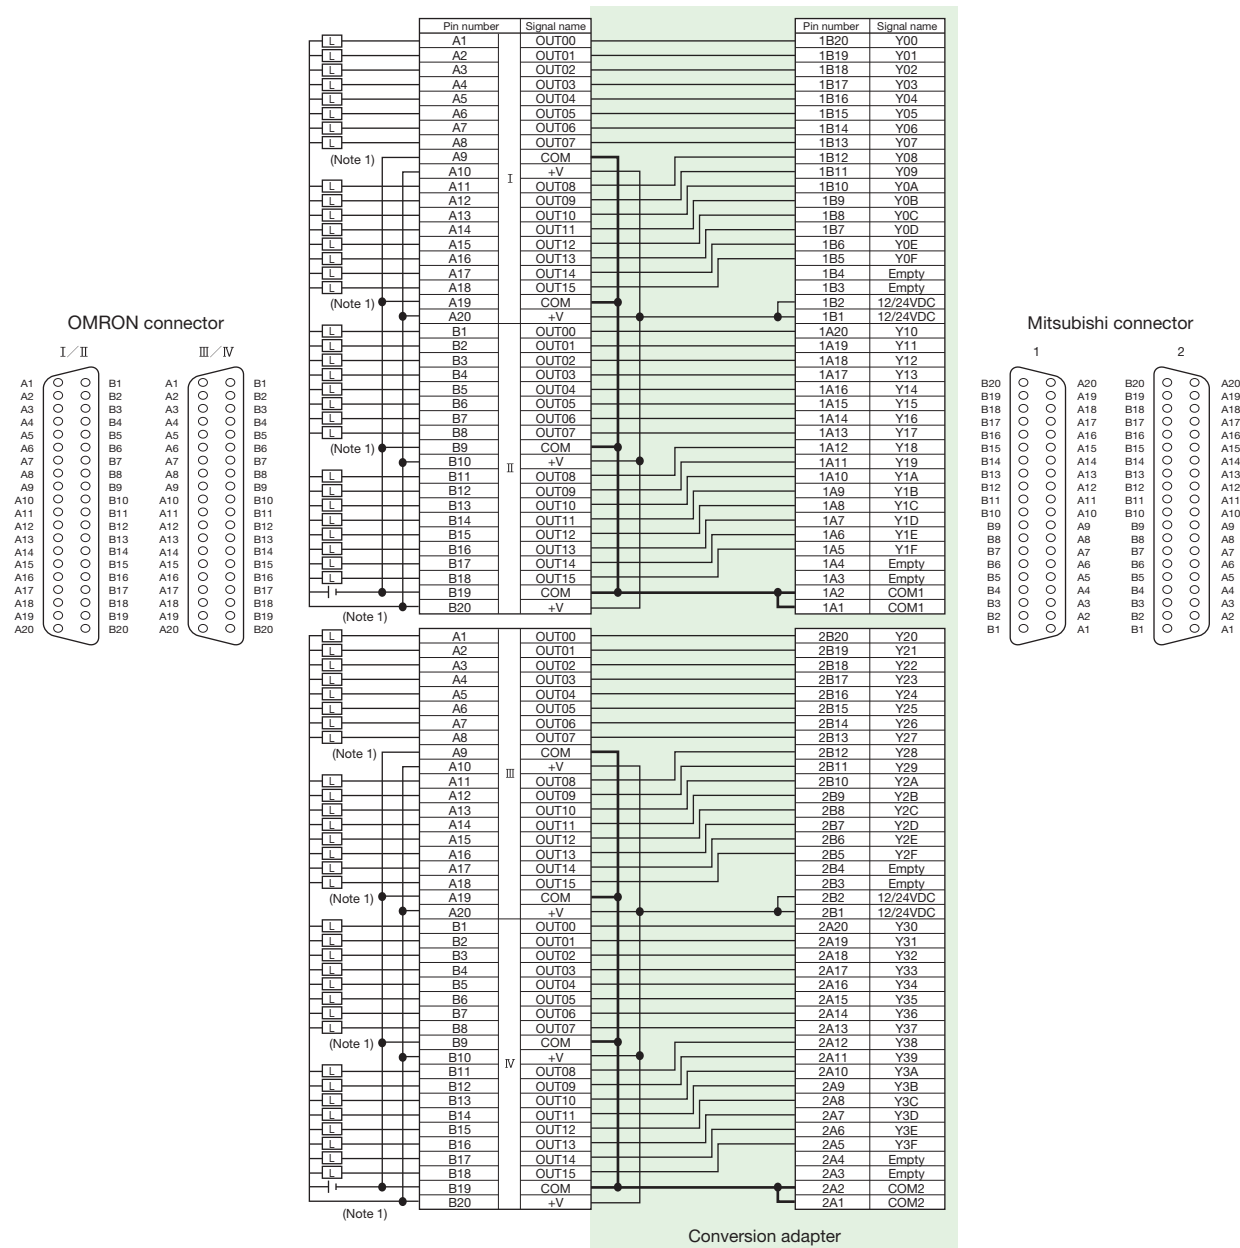

Specification	Model	SYSMAC C series	MELSEC-Q series
		C500-OD501CN	QY71
No. of output points		32 points	32 points
Switching capacity		5VDC / 35mA	5 to 12VDC / 16mA 512mA/common
Output response time	ON response time	0.2ms or less	0.5ms or less
	OFF response time	0.3ms or less	0.5ms or less
External connection		24P connector × 2	40P connector
No. of points per common		8 points (4 circuits)	32 points (1 circuit)
Leakage current		0.1mA or less	—
Surge suppressor		No	No
Fuse		No	Yes
Internal current consumption		250mA or less	150mA

Notes

- In a case where the number of points per common changes from 8 (four circuits) to 32 (one circuit) and the pin numbers A9 and B9 of I, A9 and B9 of II, A10 and B10 of I, as well as A10 and B10 of II on the SYSMAC C series side are used separately, a wiring change is required.
- Be sure to use the terminal block (4P) of the SYSMAC C series of the conversion adapter as an empty terminal (not connected). (Reason: A short-circuit is created with the power supply common inside the conversion adapter.)
- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used.

14) ERNT-CQCY213 Connector (40P) × 2 → Connector (40P) × 2

Conversion adapter model	SYSMAC C series module model	No. of input points	MELSEC-Q series module model
ERNT-CQCY213	C500-OD213	64 points	QY42P

[Output module specification comparison chart]

Model	SYSMAC C series	MELSEC-Q series
Specification	C500-OD213	QY42P
No. of output points	64 points	64 points
Switching capacity	4.5VDC / 16mA to 26.4V / 100mA (800mA/common, 6.4A/module)	12 to 24VDC / 0.1A 2A/common
Output response time	ON response time: 0.2ms or less OFF response time: 0.3ms or less	1ms or less 1ms or less
External connection	40P connector × 2	40P connector × 2
No. of points per common (Note 1)	8 points (8 circuits)	32 points (2 circuits)
Leakage current	0.1mA or less	0.1mA or less
Surge suppressor	No	Yes
Fuse	Yes	No (with protection)
Internal current consumption	460mA or less	150mA

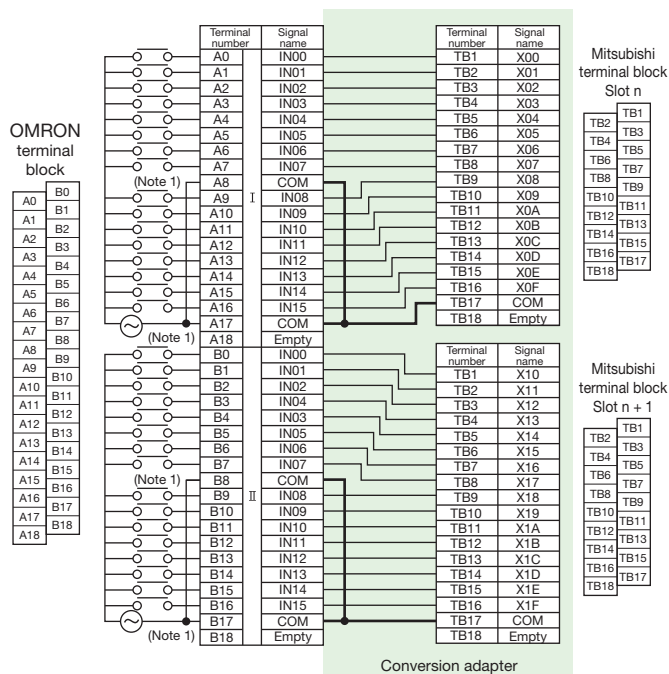

Notes

- In a case where the number of points per common changes from eight (eight circuits) to 32 (two circuits) and the pin numbers A9, A10, A19 and A20 of I, B9, B10, B19 and B20 of II, A9, A10, A19 and A20 of III, as well as B9, B10, B19, and B20 of IV on the SYSMAC C series side are used separately, a wiring change is required.
- For  areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.
- For detailed and general specifications not described in the output module specification comparison chart, refer to the user's manual of the output module used.

2-slot type

1) ERNT-CQTX122

Conversion adapter model	SYSMAC C series module model	No. of input points	MELSEC-Q series module model	No. of required modules
ERNT-CQTX122	C500-IA122	32 points	QX10	2 modules

[Input module specification comparison chart]

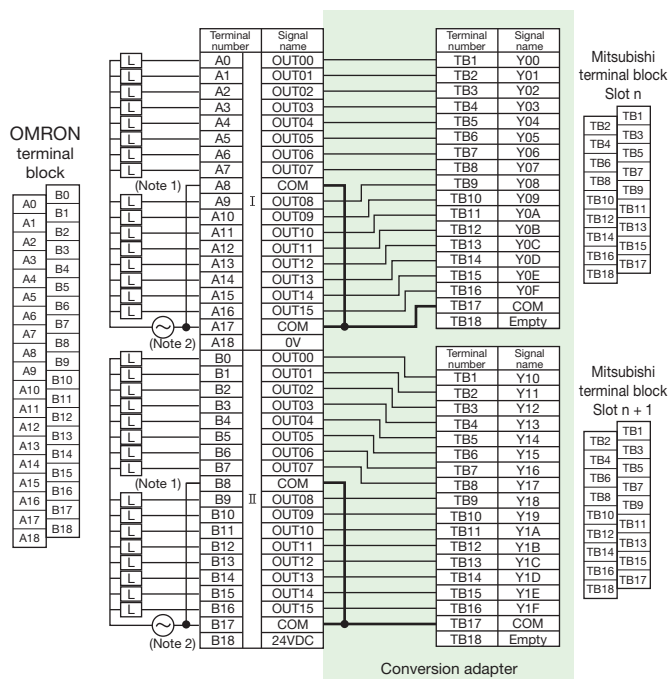

Model	SYSMAC C series	MELSEC-Q series

No. of points per common		16 points/common		16 points/common
External interface		38-point terminal block		18-point terminal block

Notes

- For areas, verify that the MELSEC-Q series module specifications satisfy the specifications of the connected device/equipment.

Base Adapter

Specifications

The base adapter allows installation of the MELSEC-Q series and conversion adapter support flange using the mounting holes for the SYSMAC C series base unit (additional drilling of holes is not required).

Base adapter model	Specifications		
	SYSMAC C series compatible module	MELSEC-Q series compatible module	Mountable conversion adapter support flange
ERNT-CQB081	C500-BC081/082	Q312B	ERNT-QF12 ERNT-QF8
	C500-BC091	Q38B	
	C2000-BC061	Q612B	
	C500-BI081	Q68B	
	C2000-BI083		
ERNT-CQB051	C500-BC051/052	Q38B	ERNT-QF8 ERNT-QF5
	C500-BC061	Q35B	
	C500-BI051	Q68B	
		Q65B	
		Q55B	
ERNT-CQB031	C500-BC031	Q35B	ERNT-QF5
		Q33B	

Mounting Dimensions

- The vertical dimension is smaller than that of the SYSMAC C series. (For module width and depth dimensions, refer to the "Usage Precautions" on 4-16.)
- The base adapter mounting holes (four) share the same dimensions as those of the SYSMAC C series base unit. There is no need to create additional holes on the control panel.
- When replacing the SYSMAC C series with the MELSEC-Q series, the slot positions where the unit is mounted are different. Adjust the wiring length prior to use.

◎ MELSEC-Q series

◎ (Reference) SYSMAC C series

Unit: mm

Base adapter model	A	B	C	OMRON base unit model	A	B	C
ERNT-CQB081	480	465	7.5	C500-BC081/082	480	465	7.5

When Not Using a Base Adapter

When a base adapter is not used, screw holes (M4 × 2) need to be provided to mount the conversion adapter support flange as shown below. The conversion adapter support flange must be mounted.

When using a main base unit

◎With Q312B, Q38B, Q35B, and Q33B

Unit: mm

Conversion adapter support flange	A
ERNT-QF12	347.2
ERNT-QF8	236
ERNT-QF5	152.6

Provide screw holes (M4 × 2) to these locations and mount the conversion adapter support flange here.

When using an extension base unit

◎With Q612B, Q68B, Q65B

Unit: mm

Conversion adapter support flange	A
ERNT-QF12	347.2
ERNT-QF8	236
ERNT-QF5	152.6

Provide screw holes (M4 × 2) to these locations and mount the conversion adapter support flange here.

◎With Q55B

Unit: mm

Provide screw holes (M4 × 2) to these locations and mount the conversion adapter support flange here.

Conversion Adapter Support Flange

Specifications

The conversion adapter support flange secures the bottom of the conversion adapter and is thus required during conversion adapter use. One support flange is required per base unit.

Conversion adapter support flange model	Specifications
ERNT-QF12	Conversion adapter support flange for 12-slot MELSEC-Q series modules
ERNT-QF8	Conversion adapter support flange for 8-slot MELSEC-Q series modules
ERNT-QF5	Conversion adapter support flange for 5-slot MELSEC-Q series modules

Usage Precautions

Module Width

The module width is smaller (34.5 mm → 27.4 mm) and the wiring area is smaller, requiring verification during mounting.

When the wiring interferes with the adjacent module, special consideration is required to secure the wiring area, such as mounting modules in every other slot (such as slots 0, 2, 4, 6, and 8 and leaving slots 1, 3, 5, and 7 empty).

Depth

The depth is larger, requiring verification during mounting.

1-slot type

SYSMAC C : SYSMAC C series

MELSEC-Q : MELSEC-Q series

Conversion Adapter Support Flange / Base Adapter

When using a conversion adapter, the conversion adapter support flange is required. We recommend use of a base adapter that permits MELSEC-Q series installation using the mounting holes of the SYSMAC C series (additional drilling of holes is not required).

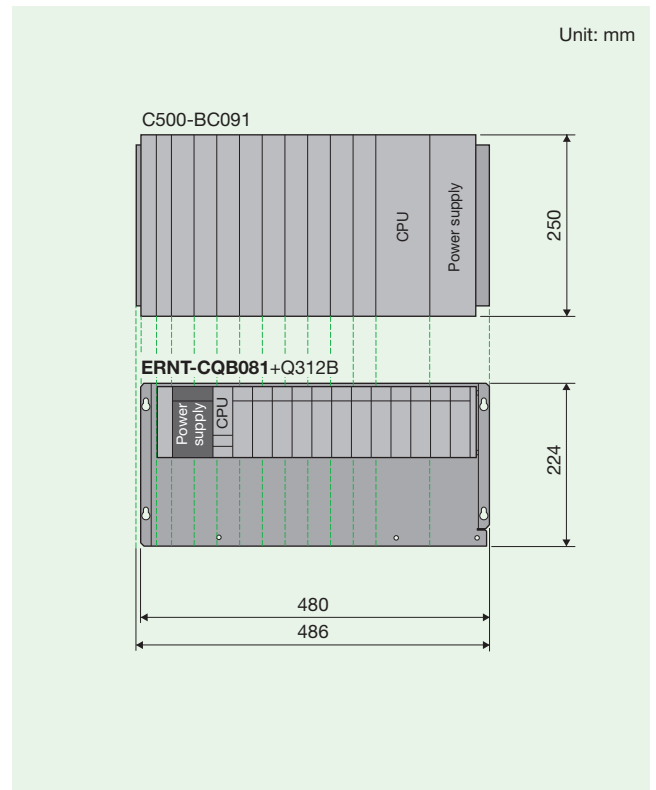

Slot Positions

When you replace the SYSMAC C series with the MELSEC-Q series, the slot positions are different. Change the slot positions where modules are mounted and adjust the wiring lengths prior to use.

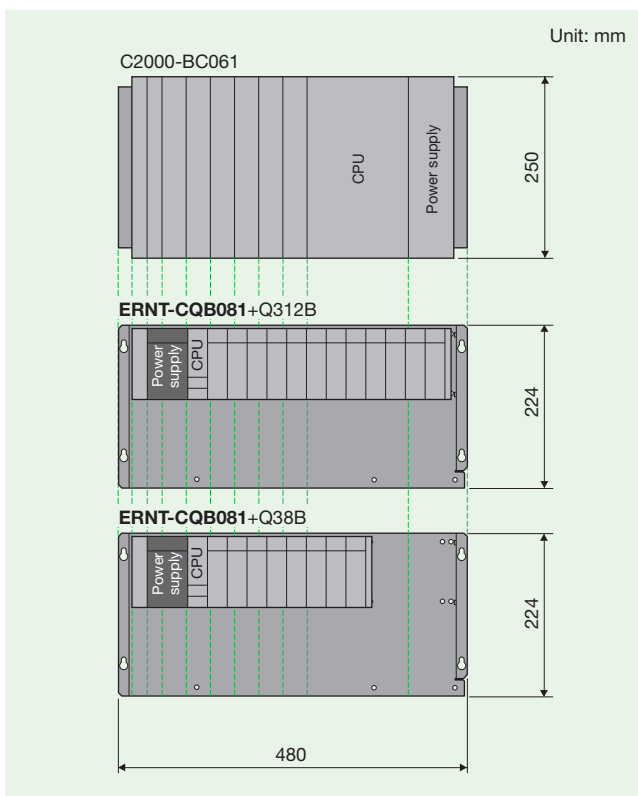

1) C500-BC081/082 → Q312B/Q38B

2) C500-BC091 → Q312B

Memo

JW series **large type** (JW50H/70H/100H)

Upgrading from the New Satellite JW Series to the MELSEC-Q Series

- **Simplifies replacement with the MELSEC-Q series**
The upgrade tool makes it easy to replace the SHARP New Satellite JW Series programmable controller with the Mitsubishi Electric MELSEC-Q series.
- **Significantly shortens the time required for input and output module wiring, and significantly reduces wiring errors**
The upgrade tool allows you to connect the wiring connected to the New Satellite JW Series input/output modules as is to the MELSEC-Q series using a conversion adapter. (Some power supply and common terminal connection changes required.)

Product Overview

This upgrade tool comprises a conversion adapter that is used to transfer the existing wiring of SHARP New Satellite JW Series programmable controller (large type: JW50H/70H/100H) input/output modules to the Mitsubishi programmable controller MELSEC-Q series input/output modules, and a "conversion adapter support flange" that is used to secure the conversion adapter at the bottom.

*1: When replacing SHARP New Satellite JW Series programmable controller (large type: JW50H/70H/100H) with Mitsubishi programmable controller MELSEC-Q series, verification of the mounting is required due to the change in module width and depth dimensions. There may be a case that the terminal block of the conversion adapter interferes with the adjacent conversion adapter. For details, refer to "Usage Precautions" on page 5-24 in this catalog.

MITSUBISHI ELECTRIC CORPORATION

Upgrading using the Q series large type base unit

Using the Mitsubishi Electric Q series large type base unit (Q□□BL) eliminates the need to secure wiring space and check for interference between adjacent conversion adapter terminal blocks.

Note that the pitch of mounting holes in some models are similar to that in the JW series, and therefore mounting positions must be reconsidered.

- If the wiring interferes with an adjacent module, wiring space can be secured by utilizing the Q series large type base unit.

- If the terminal block of a conversion adapter interferes with the adjacent conversion adapter, interference can be avoided by using the Q series large type base unit.

- Q series large type base unit configuration

- The 2-slot type conversion adapter is not applicable.
- For details on mounting dimensions, refer to page 5-16 in this catalog.

Q Series Large Type Base Unit List

Model	Description	Number of slots
Q38BL	Main base unit	8
Q35BL		5
Q68BL	Extension base unit with power supply	8
Q65BL		5
Q55BL	Extension base unit without power supply	5

Q Series Large Type Blank Cover

Model	Description
QG69L	Used to adjust gaps between modules

Model List

1 Conversion adapter

When selecting a conversion adapter, be sure to refer to the module specification comparison chart and notes on pages 5-5 to 5-11. These pages describe precautions such as differences in the number of points per common.

For detailed specifications and general specifications not described in the module specification comparison charts, refer to the user's manual for the module used.

Note that the areas where the specifications differ between the New Satellite JW Series [large type] and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

For Input/Output Modules

[1-slot type] (Applicable to the Mitsubishi Electric Q series large type base unit (Q□□BL) as well)

Input/ Output	New Satellite JW Series module model before replacement	MELSEC-Q series module model after replacement	Model	Conversion adapter		No. of input/output points	Page
				Shape			
				New Satellite JW Series	MELSEC-Q series		
Input	JW-11N	QX10	ERNT-1JQ11N12N	Terminal block (20 points)	Terminal block (18 points)	16 points	5-5
	JW-12N	QX40, QX40-S1, QX70 ³ ₇					
	JW-32N	QX41, QX41-S2, QX71 ⁴ ₈	ERNT-1JQ32N34N	Terminal block (38 points)	Connector (40P)	32 points	5-6
	JW-34N	QX41, QX41-S1, QX41-S2, QX71 ⁴ ₈					
	JW-64NC	QX42, QX42-S1, QX72 ⁵	ERNT-1JQ64NC ¹	Connector (40P)×2	Connector (40P)×2	64 points	5-7
Output	JW-13S	QY22	ERNT-1JQ13S	Terminal block (20 points)	Terminal block (18 points)	16 points	5-8
	JW-12S	QY40P, QY50, QY70	ERNT-1JQ12S				5-8
	JW-32S	QY41H ⁶	ERNT-1JQ32S	Terminal block (38 points)	Connector (40P)	32 points	5-9
	JW-32SC	QY41H	ERNT-1JQ32SC62SC	Connector (40P)	Connector (40P)	32 points	5-9
	JW-62SC	QY41H × 2	ERNT-1JQ32SC62SC×2 ²	Connector (40P) × 2	Connector (40P) × 2	32 points × 2	

*1: JW-34NC is replaced with the MELSEC-Q series 64-point input module. (32 points are not used)

*2: Two conversion adapters are required to replace the JW-62SC.

*3: Consider rewiring to the QX80 or QX80H if the existing module uses the 24VDC negative common. Also consider using the ERNT-AQTB20 in such cases.

*4: Consider rewiring to the QX81 or QX81-S2 if the existing module uses the 24VDC negative common. Also consider using the ERNT-AQTB38-E in such cases.

*5: Consider any of the following solutions if the existing module uses the 24VDC negative common.

1) JW-64NC

1. Rewiring to the QX82

2. Rewiring to two QX81s and two ERNT-AQTB38-Es

2) JW-34NC

1. Rewiring to one QX81 and one ERNT-AQTB38-E

*6: Consider rewiring to the QY50 (0.5 A, 16 points) or QY68A (2 A, 8 points) if current capacity is required. Also consider using the ERNT-AQTB20 in such cases.

*7: Consider rewiring to the QX40H or QX80H if the existing module uses a different power supply for each 8-point group. Also consider using the ERNT-AQTB20 in such cases.

*8: Consider rewiring to two QX40Hs or two QX80Hs if the existing module uses a different power supply for each 8-point group. Also consider using the ERNT-AQTB20 in such cases.

[2-slot type] (Not applicable to Mitsubishi Electric Q series large type base unit (Q□□BL))

Input/Output	New Satellite JW Series module model before replacement	MELSEC-Q series module model after replacement	Model	Conversion adapter		No. of input/output points	Page
				Shape			
				New Satellite JW Series	MELSEC-Q series		
Input	JW-31N	QX10 x 2	ERNT-1JQ31N34S	Terminal block (38 points)	Terminal block (18 points) x 2	32 points	5-10
Output	JW-34S	QY10 x 2					
	JW-33S	QY22 x 2	ERNT-1JQ33S				5-11

☆ **Universal conversion adapter** (*Requires rewiring. For details, refer to page 7-1 in this catalog.)

Input/output modules and analog/high-speed counter modules in the table below do not support the use of a conversion adapter. These modules, however, can be replaced by using a universal conversion adapter even though rewiring is required.

Check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.

For Input/Output Modules

Input/Output	New Satellite JW Series module model			MELSEC-Q series module model				Universal conversion adapter
	Model	Specifications	No. of points	Model	Specifications	No. of points	No. of required modules	
Input	JW-13N	200-240VAC	16 points	QX28	100 to 240VAC	8 points	2 modules	(*9)
Output	JW-35S	12/24VDC source type	32 points	QY81P	12/24VDC source type	32 points	1 modules	(*9)

*9: The universal conversion adapter (refer to page 7-5) can be used for replacement.

For Analog/High-Speed Counter Modules

Input/Output	New Satellite JW Series module model			MELSEC-Q series module model				Universal conversion adapter
	Model	Specifications	Number of channels	Model	Specifications	Number of channels	No. of required modules	
Analog input	JW-8AD	-10 to 10VDC, -20 to 20mADC 14-bit signed binary	8	Q68AD-G	-10 to 0 to +10VDC, 0 to 20mADC 16-bit signed binary	8	1 module	(*10)
Analog output	JW-2DA	-10 to 10VDC, -20 to 20mADC 11-bit signed binary	2	Q62DAN	-10 to +10VDC, 0 to 20mADC 16-bit signed binary	2	1 module	(*10)
High-speed counter input	JW-2HC	50/20/15/8kpps 24-bit binary	2	QD62	200/100/10kpps 32-bit binary	2	1 module	(*10)

*10: The universal conversion adapter (refer to page 7-5) can be used for replacement.

2 Conversion adapter support flange (required)

The same support flange used to replace MELSEC-A series with MELSEC-Q series is used.

A conversion adapter support flange secures the bottom of a conversion adapter. One support flange is required per base unit when a conversion adapter is used.

Note

For panel surface installation, drilling screw holes (M4 screw, 2 locations) is required.

Note that drilling holes is not required when a base adapter is used.

Conversion adapter support flange model	Specifications	Page
ERNT-AQF12	12-slot conversion adapter support flange	5-12
ERNT-AQF8	8-slot conversion adapter support flange	
ERNT-AQF5	5-slot conversion adapter support flange	
ERNT-AQF3	3-slot conversion adapter support flange	

3 Base adapter

The same base adapter used to replace MELSEC-A series with MELSEC-Q series is used.

Both the MELSEC-Q series base unit and the conversion adapter support flange can be installed on the base adapter without drilling screw holes.

For the base unit models marked with *1 to *5, two or more base adapter models are applicable.

Note

Two additional mounting holes (M5 screw) and four M5 screws need to be prepared by the user to install the base adapter to the control panel.

(Additional mounting holes are not required if the mounting dimensions are the same before and after replacement and the existing four mounting holes can be used.)

Base adapter model	Mountable product						Product dimensions	Page
	MELSEC-Q series base unit					Conversion adapter support flange	Width x Height (mm)	
	12 slots	8 slots	5 slots	3 slots	2 slots			
ERNT-AQB38	Q312B					ERNT-AQF12, ERNT-AQF8	480 × 240	5-15

Conversion Adapter

Specifications

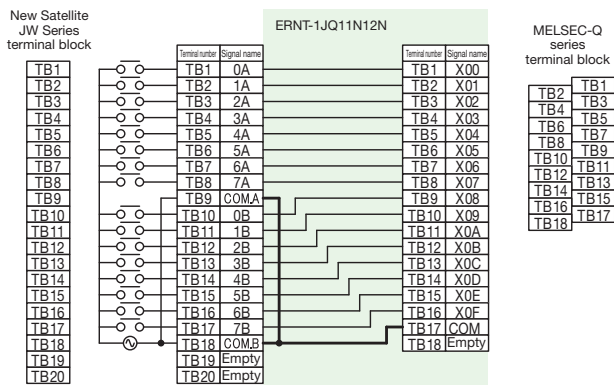

For Input/Output Modules

1-slot type (Applicable to MELSEC-Q series large type base units (Q□□BL) as well)

(1) ERNT-1JQ11N12N Terminal block (20P)→Terminal block (18P)

Conversion adapter model	New Satellite JW Series module model	No. of input points	MELSEC-Q series module model
ERNT-1JQ11N12N	JW-11N	16 points	QX10
	JW-12N	16 points	QX40 QX40-S1 QX70

JW-11N→QX10

[Specification comparison chart]

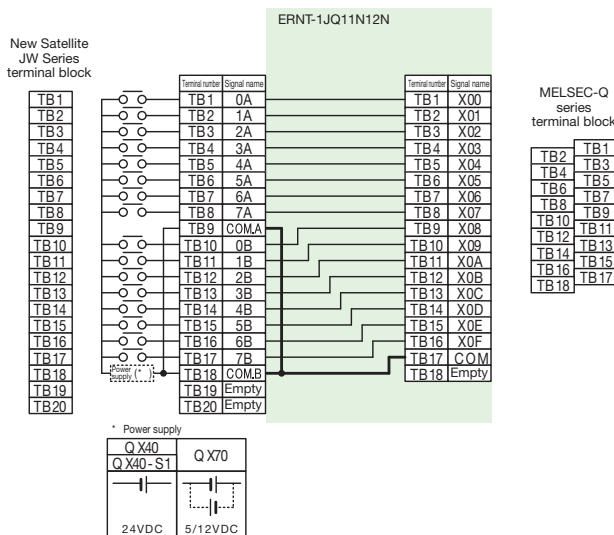

Model	New Satellite JW Series	MELSEC-Q series
Specifications	JW-11N	QX10
No. of input points	16 points	16 points
Rated input voltage	100-120VAC 50/60Hz	100-120VAC 50/60Hz
Rated input current	Approx. 10mA (100VAC 60Hz) Approx. 8.4mA (100VAC 50Hz)	Approx. 8mA (100VAC 60Hz) Approx. 7mA (100VAC 50Hz)
Input impedance	Approx. 10kΩ (60Hz) Approx. 12kΩ (50Hz)	Approx. 12kΩ (60Hz) Approx. 15kΩ (50Hz)
Inrush current	Max. 480mA 0.2ms (132VAC)	Max. 200mA 1ms (132VAC)
Operating voltage/current	ON: 80VAC / 7mA OFF: 30VAC / 3mA	80VAC / 5mA 30VAC / 1.7mA
Response time	OFF→ON: 25ms or less ON→OFF: 25ms or less	15ms or less 20ms or less
Isolation method	Photocoupler isolation	Photocoupler isolation
Wiring method for common	8 points per common	16 points per common
External interface	20-point terminal block	18-point terminal block

Notes 1. In a case where the number of points per common changes from 8 (two circuits) to 16 and the terminal numbers TB9 and TB18 on the New Satellite JW Series side are used separately, a wiring change is required.

2. For [] areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.

3. For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

JW-12N→QX40/QX40-S1/QX70

[Specification comparison chart]

Model	New Satellite JW Series	MELSEC-Q series

No. of output points	32 points	32 points
Rated load voltage	5/12/24VDC	5/12/24VDC
Maximum load current	1A/point 8A/common	0.2A/point 2A/common
Minimum load current	—	—
Maximum inrush current	4A, 100ms or less	0.7A 10ms or less
Leakage current at OFF	0.2mA or less	0.1mA or less
Voltage drop at ON	1VDC (MAX.) 1A	0.2VDC (MAX.) 0.1A
Response time	OFF→ON 1ms or less	2μs or less
	ON→OFF 1ms or less (resistive load)	2μs or less (resistive load)
Surge suppressor	Zener diode	Zener diode
Fuse	8A (not replaceable)	None
Isolation method	Photocoupler isolation	Photocoupler isolation
Wiring method for common	16 points per common	32 points per common
External interface	38-point terminal block	40-pin connector

Notes

- In a case where the number of points per common changes from 16 (two circuits) to 32 and the terminal numbers TB17 and TB35 on the New Satellite JW Series side are used separately, a wiring change is required.
- For [] areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.
- For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
- Consider rewiring to the QY50 (0.5A, 16 points) or QY68A (2A, 8 points) if current capacity is required. Also consider using the ERNT-AQTB20 in such cases.

(7) ERNT-1JQ32SC62SC Connector (40P) → Connector (40P)

Conversion adapter model	New Satellite JW Series module model	No. of output points	MELSEC-Q series module model
ERNT-1JQ32SC62SC	JW-32SC	32 points	QY41H
ERNT-1JQ32SC62SC × 2	JW-62SC ^{*1}	64 points	QY41H × 2 modules

^{*1}: Two sets of the QY41H and the conversion adapter are required (32 points for each set) to replace the JW-62SC.

Wiring method for common	8 points per common	16 points per common
External interface	38-point terminal block	18-point terminal block

Notes

- In a case where the number of points per common changes from 8 (four circuits) to 16 (two circuits) and the terminal numbers TB9/TB18 and TB27/TB36 on the New Satellite JW Series side are used separately, a wiring change is required.
- For [] areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.
- For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

JW-34S → QY10

[Specification comparison chart]

Model	New Satellite JW Series	MELSEC-Q series
Specifications	JW-34S	QY10
No. of output points	32 points	16 points
Rated load voltage	30VDC / 264VAC	24VDC / 240VAC
Maximum load current	2A/point 5A/common	2A/point 8A/common
Minimum load current	1mA (5VDC)	1mA (5VDC)
Maximum inrush current	—	—
Leakage current at OFF	—	—
Voltage drop at ON	—	—
Response time	OFF→ON: 10ms or less ON→OFF: 10ms or less	10ms or less 12ms or less
Surge suppressor	None	None
Fuse	None	None
Isolation method	Relay isolation	Relay isolation
Wiring method for common	8 points per common	16 points per common
External interface	38-point terminal block	18-point terminal block

Notes

- In a case where the number of points per common changes from 8 (four circuits) to 16 (two circuits) and the terminal numbers TB9/TB18 and TB27/TB36 on the New Satellite JW Series side are used separately, a wiring change is required.
- The external power supply connected to terminal numbers TB37 and TB38 on the New Satellite JW Series side is no longer required. Such devices may remain connected though as the conversion adapter is not wired internally for this connection.
- For [] areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.
- For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

(2) ERNT-1JQ33S Terminal block (38P)→Terminal block (18P) × 2

Conversion adapter model	New Satellite JW Series module model	No. of output points	MELSEC-Q series module model	No. of required modules

Notes 1. For [] areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.

2. For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

Conversion Adapter Support Flange (Required)

Specifications

A conversion adapter support flange secures the bottom of a conversion adapter. This is required when a conversion adapter is used. One support flange is required per base unit.

The same support flange used to replace MELSEC-A series with MELSEC-Q series is used.

Conversion adapter support flange model	Specifications
ERNT-AQF12	Conversion adapter support flange for 12 slots of MELSEC-Q series modules
ERNT-AQF8	Conversion adapter support flange for 8 slots of MELSEC-Q series modules
ERNT-AQF5	Conversion adapter support flange for 5 slots of MELSEC-Q series modules
ERNT-AQF3	Conversion adapter support flange for 3 slots of MELSEC-Q series modules

When using a main base unit

Unit: mm

Drill screw holes (M4 screw, 2 locations) at these positions, and install the conversion adapter support flange.

© Q52B

Unit: mm

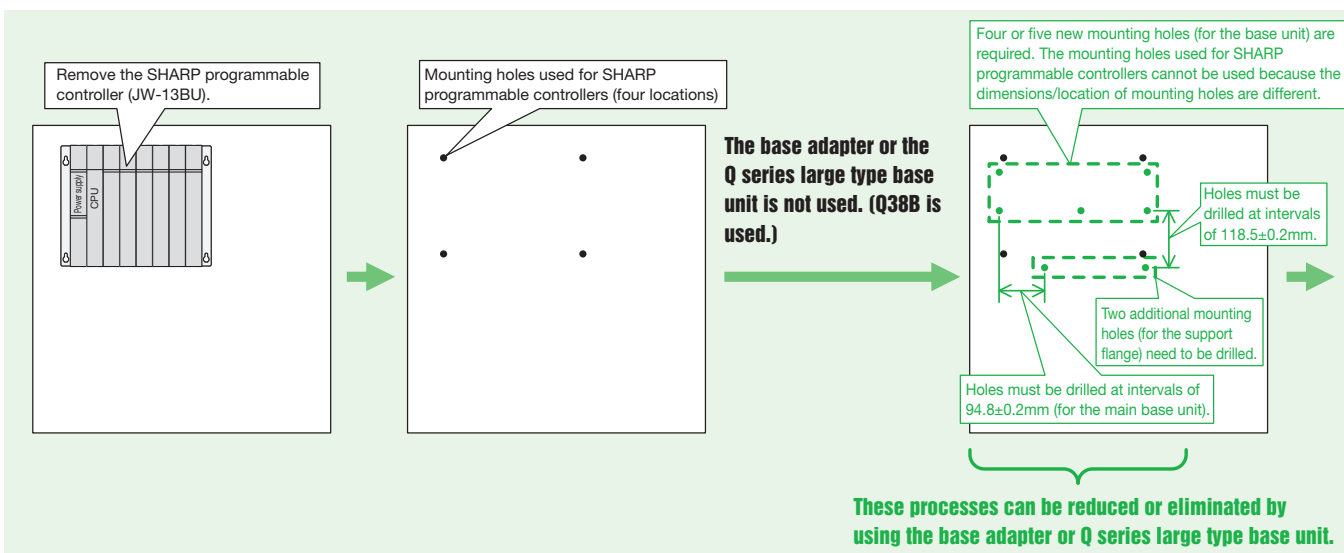

Drill screw holes (M4 screw, 2 locations) at these positions, and install the conversion adapter support flange.

Upgrading Using the Base Adapter or the Q Series Large Type Base Unit (Manufactured by Mitsubishi Electric)

Using the base adapter or the Q series large type base unit eliminates the need to drill mounting holes and determine installation positioning of the support flange.

When the base adapter or the Q series large type base unit is not used

Six or seven new mounting holes are required and the installation positions of the Q series base unit and the support flange need to be determined.

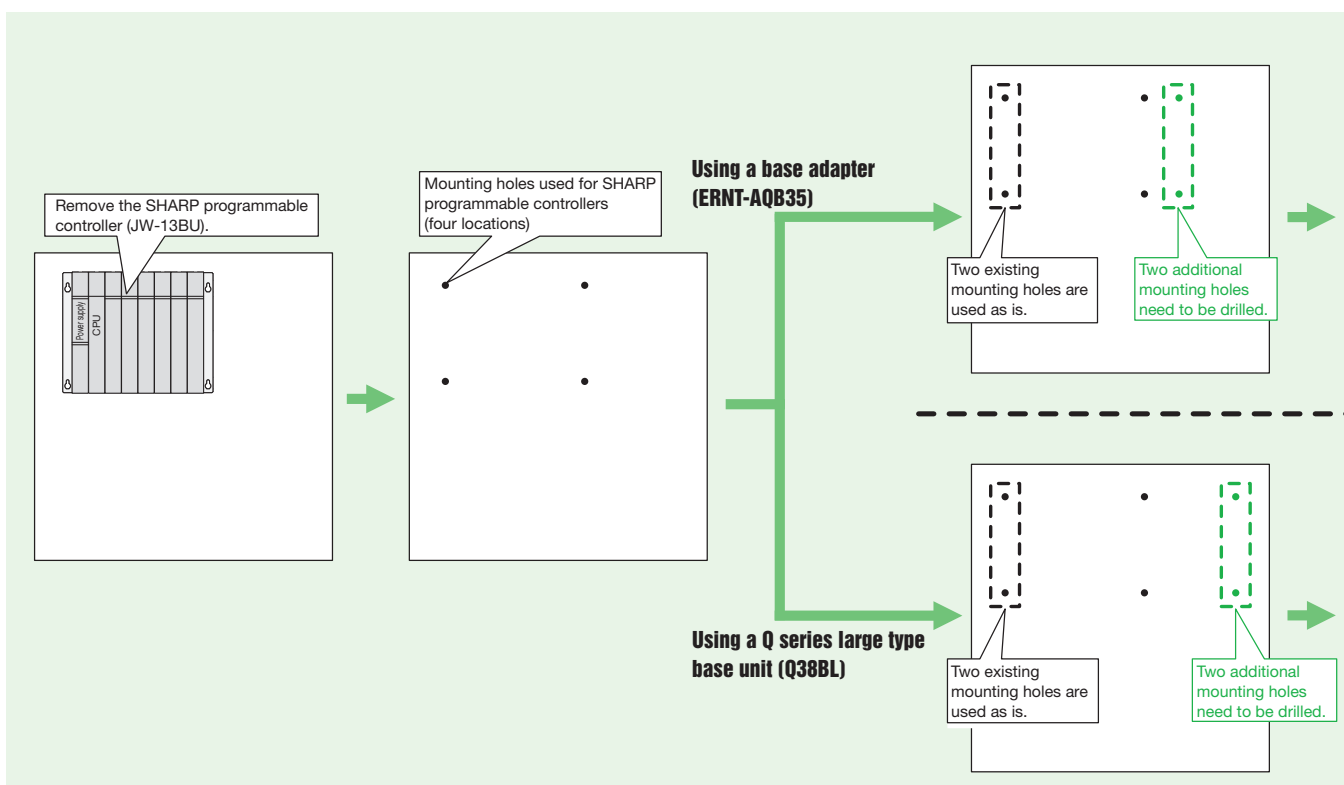

When the base adapter or the Q series large type base unit (the same one used to replace MELSEC-A series [large type] with MELSEC-Q series) is used

Only a maximum of 2 holes must be drilled due to the base adapter or Q series large type base unit having the same mounting hole height dimensions as the JW series base unit.

(Additional mounting holes are not required if the mounting dimensions before and after replacement are the same and the existing four mounting holes can be used.)

The following figure shows the installation when two existing mounting holes on the left are used.

For details, refer to "Mounting Dimensions" on page 5-16, "Comparison of External Dimensions and Mounting Hole Dimensions for Replacements" on page 5-17, and "Slot Positions" on page 5-19.

Base Adapter

Specifications

Both the MELSEC-Q series base unit and the conversion adapter support flange can be installed on the base adapter without drilling screw holes.

The same base adapter used to replace MELSEC-A series with MELSEC-Q series is used.

Note

- Two additional mounting holes (M5 screw) and four M5 screws need to be prepared by the user to install the base adapter to the control panel. (Additional mounting holes are not required if the mounting dimensions are the same before and after replacement and the existing four mounting holes can be used.)

For the base unit models marked with *1 to *5, two or more base adapter models are applicable. Select the most suitable base adapter according to the product dimensions.

Base adapter model	Mountable product					Product dimensions		
	MELSEC-Q series base unit						Conversion adapter support flange	Width x Height (mm)
	12 slots	8 slots	5 slots	3 slots	2 slots			
ERNT-AQB38	Q312B	Q38B (*1)				ERNT-AQF12, ERNT-AQF8 ERNT-AQF8	480×240	
ERNT-AQB35		Q38B (*1)	Q35B			ERNT-AQF8, ERNT-AQF5 ERNT-AQF5	382×240

ERNT-AQB52					Q52B (*5)	ERNT-AQF3	183×240	

Mounting Dimensions

- The slot positions of modules differ between the New Satellite JW Series and the MELSEC-Q series. After replacement, adjust the length of cables.
- The height is lower than that of the New Satellite JW Series modules.
(For the width and depth, refer to "Usage Precautions" on page 5-24.)
- Two of the four mounting holes of the base adapter and the Q series large type base unit are the same size as those of the New Satellite JW Series base unit, and therefore only two additional mounting holes need to be drilled on the control panel.
(Additional mounting holes are not required if the mounting dimensions are the same before and after replacement and the existing four mounting holes can be used.)

• Base adapter + MELSEC-Q series base unit

Base adapter model	Description	A	B	C	Mounting screw hole size
ERNT-AQB38	Main base unit	480	460	10	M5
ERNT-AQB35		382	362	10

JW-13BU	Main base unit / Extension base unit	480	460	10	M5
JW-8BU		310	290	10	
JW-6BU		242	222	10	
JW-4BU		174	154	10	

Comparison of External Dimensions and Mounting Hole Dimensions for Replacements

Use the following tables to check the differences of external dimensions and mounting hole dimensions before and after replacement.

Notes

- "▲" indicates that the dimensions will be larger after replacement as shown in the example below. Reconsider the installation position.
- If there are not enough mounting slots, use an extension base unit.
- The JW□□BU within the New Satellite JW Series is a shared main/extension base unit. Note that the number of slots varies between models that have/do not have built-in power supplies and/or CPUs.
- If your JW series base unit model is not listed here, check the number of slots, external dimensions, mounting dimensions, and other specifications and then select the optimal base adapter or Q series large type base unit.

Example) Replacing New Satellite JW Series (JW-8BU) with base adapter + MELSEC-Q series base unit (ERNT-AQB35+Q38B)

When using a main base unit

1. Replacing with MELSEC-Q series base unit or MELSEC-Q series base unit + base adapter

◎: Same, ○: JW series is larger, ▲: JW series is smaller

*1: Values in parentheses indicate differences in dimensions (unit: mm) between the Q series large type base and JW series modules.

Slot Positions

The slot positions differ between the New Satellite JW Series and the MELSEC-Q series. After replacement, change the slot positions of modules and adjust the length of cables.

Note

Values in parentheses indicate differences in dimensions with JW series modules.

Usage Precautions

Module Width

(1) Since the width of MELSEC-Q series modules is smaller (New Satellite JW Series: 33.5mm → MELSEC-Q series: 27.4mm), the wiring area becomes smaller as well. Check the wiring area when mounting a conversion adapter.

(2) If the wiring causes interference with adjacent modules, take an action such as lifting the wiring forward to prevent interference.

(3) If interference still occurs even when you lift the wiring, keep the next slot open to secure a space for wiring.

Example) Q312B

Mount a connector cover (accessory) or blank cover module (QG60) to prevent dust from entering the connector of a spare space where a module is not mounted.

(4) If a problem still exist, consider using the Mitsubishi Electric Q series large type base unit (wiring space of 37.5mm).
Note: The 2-slot type conversion adapter is not applicable.

Depth

The following tables list the depth dimensions. The depth is larger, so verification is required for mounting.
The values in parentheses, which are 11.8mm smaller, represent the depth when the base adapter or Q series large type base unit is not used.

1-slot type

New Satellite JW : New Satellite JW Series MELSEC-Q : MELSEC-Q series

Conversion adapter	ERNT-1JQ11N12N ERNT-1JQ12S	ERNT-1JQ13S	ERNT-1JQ32N34N ERNT-1JQ32S	ERNT-1JQ64NC ERNT-1JQ32SC62SC
Depth	143.8mm (132mm)	165.8mm (154mm)	164.5mm (152.7mm)	173.2mm (161.4mm)

*: Each depth is measured from the panel surface.

New Satellite JW Series: Base unit + Input/output modules + Terminal block (connector)

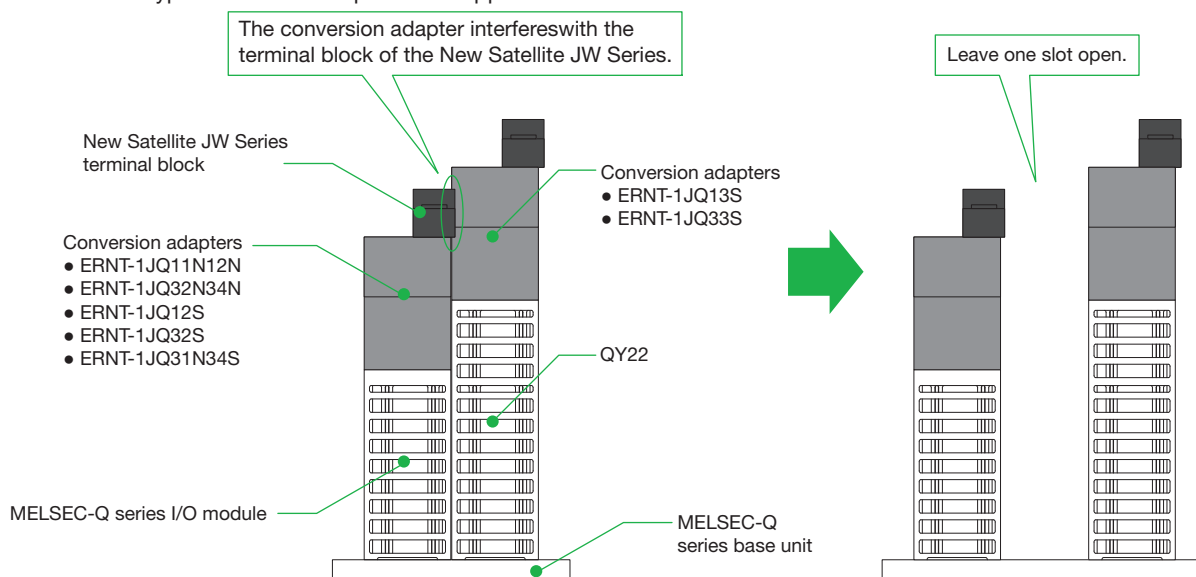

MELSEC-Q series + Upgrade tool: Base adapter + Base unit + Input/output modules + Conversion Adapter + Terminal block (connector)

Check for Interference with Adjacent Modules

Leave one slot open to prevent interference of the terminal blocks when the adjacent conversion adapters are as follows.

Note that an open slot is not required when the MELSEC-Q series large type base unit is used because there will be a gap between modules.

Note: The 2-slot type conversion adapter is not applicable.

Conversion Adapter Support Flange / Base Adapter

When using a conversion adapter, the conversion adapter support flange is required. We recommend use of a base adapter that permits MELSEC-Q series installation using the mounting holes of the New Satellite JW Series (additional drilling of holes is not required).

JW series **small type** (JW300/30H/20H)

Upgrading from the New Satellite JW series to the MELSEC-Q series

■ Simplifies replacement with the MELSEC-Q series

The upgrade tool makes it easy to replace the SHARP New Satellite JW Series programmable controller with the Mitsubishi Electric MELSEC-Q series.

■ Significantly shortens the time required for I/O module wiring and significantly reduces wiring errors

The upgrade tool allows you to connect the wiring connected to the New Satellite JW Series I/O modules as is to the MELSEC-Q series using a conversion adapter. (Partial changes to power supply and common terminal connections required.)

Product Overview

This upgrade tool includes a conversion adapter that is used to transfer the existing wiring of SHARP New Satellite JW Series programmable controller (small types: JW300/30H/20H) input/output modules to the Mitsubishi programmable controller MELSEC-Q series input/output modules.

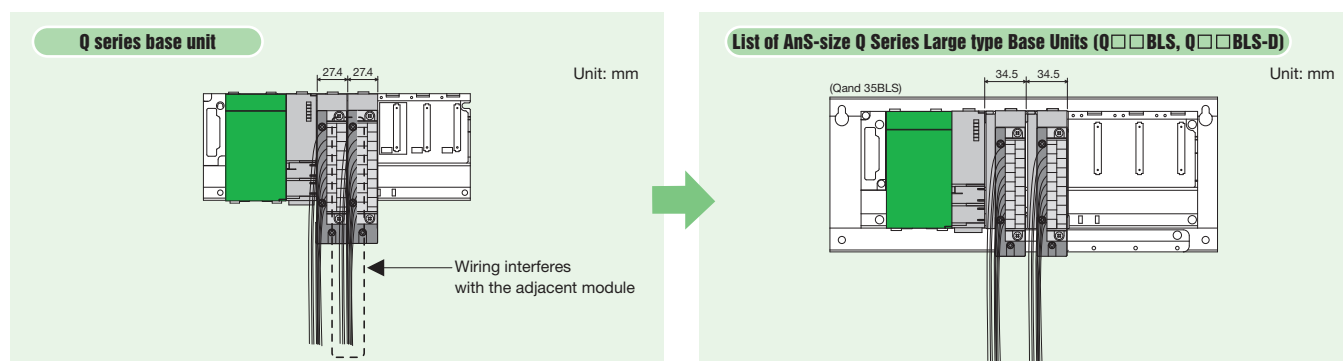

*1: When replacing SHARP New Satellite JW Series programmable controller (small type: JW300/30H/20H) with Mitsubishi programmable controller MELSEC-Q series, verification of the mounting is required due to the change in module width and depth dimensions. The conversion adapter terminal block may cause interference with adjacent modules. For details, refer to "Usage Precautions" on page 5-45 in this catalog.

Mitsubishi Electric AnS-size Q Series Large Type Base Unit (Recommended)

In light of the following circumstances, we recommend that you use the Mitsubishi Electric AnS-size Q series large type base unit (Q□□BLS, Q□□BLS-D).

Note that the pitch of mounting holes in some models are similar to that in the JW series, and therefore mounting positions must be reconsidered.

●The AnS-size Q series large type base unit can be used to remove terminal block interference when use of the conversion adapter causes interference with adjacent modules.

mitsubishi electric corporation

Upgrading using the AnS-size Q series large type base unit

Using the Mitsubishi Electric AnS-size Q series large type base unit (Q□□BLS, Q□□BLS-D) eliminates the need to secure wiring space and check for interference between adjacent conversion adapter terminal blocks.

Note that the pitch of mounting holes in some models are similar to that in the JW series, and therefore mounting positions must be reconsidered.

●For details on mounting dimensions, refer to page 5-39 in this catalog.

List of AnS-size Q Series Large type Base Units

Model		Description	Number of slots
Panel surface installation type	DIN rail installation type		
Q38BLS	Q38BLS-D	Main base unit	8
Q35BLS	Q35BLS-D		5
Q68BLS	Q68BLS-D	Extension base unit with power supply	8

QG69LS	Used to adjust gaps between modules

Model List

1 Conversion adapter

When selecting a conversion adapter, be sure to refer to the module specification comparison charts and notes on pages 5-34 to 5-38.

These pages describe precautions such as differences in the number of points per common. For detailed specifications and general specifications not described in the module specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series small type and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

For Input/Output Modules

[1-slot type] (Applicable to the Mitsubishi Electric AnS-size Q series large type base unit (Q□□BLS, Q□□BLS-D) as well)

Input/Output	New Satellite JW Series module model before replacement	MELSEC-Q series module model after replacement	Conversion adapter				Page
			Model	Shape		No. of input/ output points	
				New Satellite JW Series	MELSEC-Q series		
Input	JW-211N JW-211NA	QX10	ERNT-2JQ210NS	Terminal block (18 points)	Terminal block (18 points)	16 points	5-34
Output	JW-213S JW-213SA	QY22					
	JW-214S JW-214SA	QY10

	JW-264N	QX41 × 2, QX41-S1 × 2, QX41-S2 × 2 ^{*7*8}	ERNT-2JQ234N264N × 2 ^{*1}	Connector (40P) × 2	Connector (40P) × 2	32 points × 2	
Output	JW-232S	QY41H	ERNT-2JQ232S262S	Connector (40P)	Connector (40P)	32 points	5-38
	JW-262S	QY41H × 2	ERNT-2JQ232S262S × 2 ^{*2}	Connector (40P) × 2	Connector (40P) × 2	32 points × 2	

*1: Two conversion adapters are required to replace the JW-264N. *2: Two conversion adapters are required to replace the JW-262S.

*3: Consider rewiring to the QX40H or QX80H if the existing module uses a different power supply for each 8-point group. Also consider using the ERNT-ASQTB20 in such cases.

*4: Another power supply is required: 12/24VDC for QY40P and QY50, and 5/12VDC for QY70.

*5: Consider rewiring to the QX81 or QX81-S2 if using a 24VDC negative common.

*6: Consider rewiring to two QX40s, two QX40-S1s, two QX70s, or two QX80s if the existing module uses a different power supply for each 16-point group. Also consider using the ERNT-ASQTB20 in such cases.

*7: Cannot be used with negative common input.

*8: Consider rewiring to the QX82 or QX82-S1 if using a 24VDC negative common.

☆ Universal conversion adapter (*Requires rewiring. For details, refer to page 7-1 in this catalog.)

Input/output modules and analog/high-speed counter modules in the table below do not support the use of a conversion adapter. These modules, however, can be replaced by using a universal conversion adapter even though rewiring is required.

Check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.

For Input/Output Modules

Input/Output	New Satellite JW Series module model			MELSEC-Q series module model				Universal conversion adapter
	Model	Specifications	No. of points	Model	Specifications	No. of points	No. of required modules

Surge suppressor	None	None
Fuse	None	None
Isolation method	Relay isolation	Relay isolation
Wiring method for common	8 points per common	16 points per common
External interface	18-point terminal block	18-point terminal block

Notes 1. In a case where the number of points per common changes from 8 (two circuits) to 16 and the terminal numbers TB9 and TB18 on the New Satellite JW Series side are used separately, a wiring change is required.

2. For [] areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.

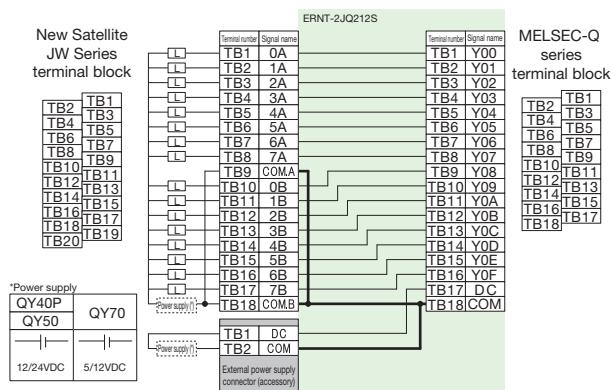

3. For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

4. Consider rewiring to the QX40H or QX80H if the existing module uses a different power supply for each 8-point group. Also consider using the ERNT-ASQTB20 in such cases.

Response time	OFF→ON ON→OFF	1ms or less 1ms or less (resistive load)	2μs or less 2μs or less (resistive load)
Surge suppressor	Zener diode	Zener diode	Zener diode
Fuse	2A (not replaceable)	2.5A (not replaceable)	None
Isolation method	Photocoupler isolation	Photocoupler isolation	Photocoupler isolation
Wiring method for common	16 points per common	32 points per common	32 points per common
External interface	40-pin connector	40-pin connector × 2	40-pin connector

Notes 1. In a case where the number of points per common changes from 16 (two circuits) to 32 and the pin numbers A2/B2 and A20/B20 on the JW-232S side are used separately, a wiring change is required.

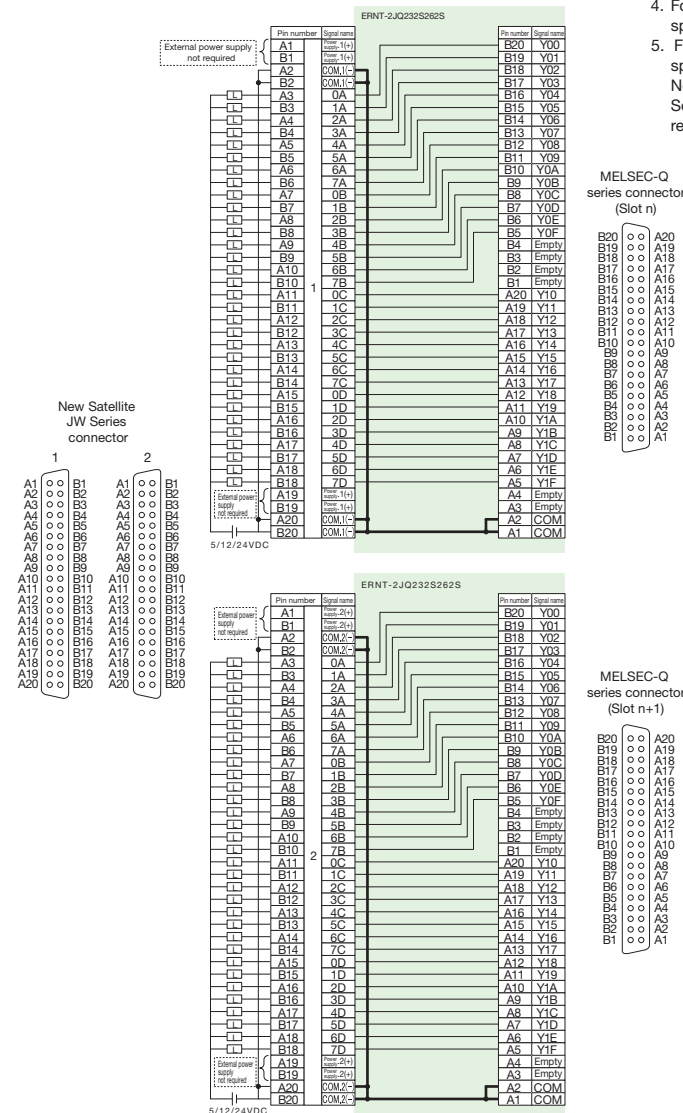

2. Two sets of the QY41H and the conversion adapter are required (32 points for each set) to replace the JW-262S.

3. The external power supplies connected to pin numbers A1 and B1 of 1 and pin numbers A1 and B1 of 2 in the New Satellite JW Series module are no longer required for JW-262S replacements. Such devices may remain connected though as the conversion adapter is not wired internally for this connection.

4. For  areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.

5. For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the New Satellite JW Series and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

JW-262S→QY41H × 2

MITSUBISHI ELECTRIC CORPORATION Base Unit

Note

The positions of the 4 mounting holes needed for the base unit are different from those for the New Satellite JW Series base unit, and therefore you will need to drill additional screw holes into the control panel.

Mounting Dimensions

- The slot positions of modules differ between the New Satellite JW Series and the MELSEC-Q series. After replacement, adjust the length of cables.

Unit: mm

• AnS-size Q series large type base unit Panel surface installation type

AnS-size Q series large type base unit model	Description	A	B	Mounting screw hole size

Comparison of External Dimensions and Mounting Hole Dimensions for Replacements

Use the following tables to check the differences of external dimensions and mounting hole dimensions before and after replacement.

Note

"▲" indicates that the dimensions will be larger after replacement as shown in the example below. Reconsider the installation position. If there are not enough mounting slots, use an extension base unit.

Example) Replacing the New Satellite JW Series (JW-26KB, JW-36KB) with the AnS-size Q series large type base unit (Q38BLS)

Replacing with AnS-size Q series large type base unit or MELSEC Q series base unit

1. When using a main base unit

○: Same, ○: JW series is larger, ▲: JW series is smaller

*2: Exercise caution when distance between holes is near.

Slot Positions

The slot positions differ between the New Satellite JW Series and the MELSEC-Q series. After replacement, change the slot positions of modules and adjust the length of cables.

Note

The size of mounting holes for the AnS-size Q series large type base unit is the same as that for the New Satellite JW Series, and therefore the mounting holes are used as the reference for left-aligned and right-aligned installations. For MELSEC-Q series base units, the size of mounting holes are different from that for the New Satellite JW Series, and therefore the edge of the base unit is used as the reference for left-aligned and right-aligned installations. Values in parentheses indicate differences in external dimensions with New Satellite JW Series modules.

When using a main base unit

(1) JW-28KB, JW-38KB → Q38BLS / Q38B, Q312B

AnS-size Q series large type base unit

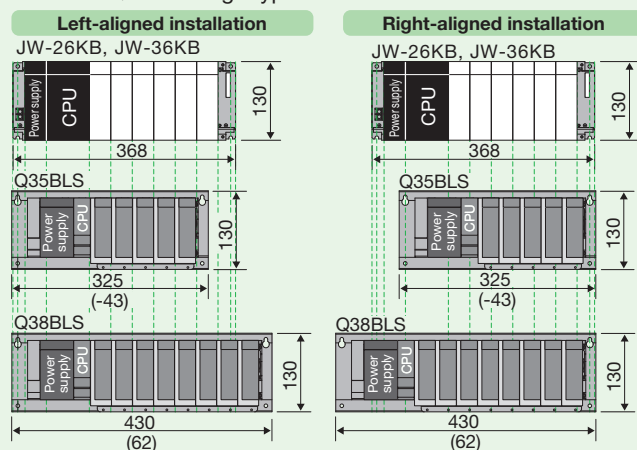

MELSEC-Q series base unit

(2) JW-26KB, JW-36KB → Q35BLS, Q38BLS / Q35B, Q38B, Q312B

AnS-size Q series large type base unit

MELSEC-Q series base unit

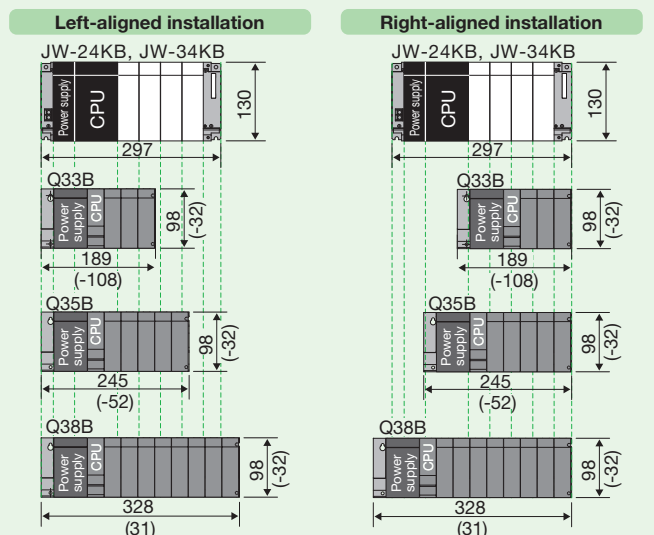

(3) JW-24KB, JW-34KB → Q35BLS / Q33B, Q35B, Q38B

AnS-size Q series large type base unit

MELSEC-Q series base unit

(4) JW-318KB → Q38BLS / Q38B, Q312B

AnS-size Q series large type base unit

MELSEC-Q series base unit

Unit: mm

(5) JW-316KB → Q35BLS, Q38BLS / Q35B, Q38B, Q312B

AnS-size Q series large type base unit

MELSEC-Q series base unit

Unit: mm

(6) JW-314KB → Q35BLS / Q33B, Q35B, Q38B

AnS-size Q series large type base unit

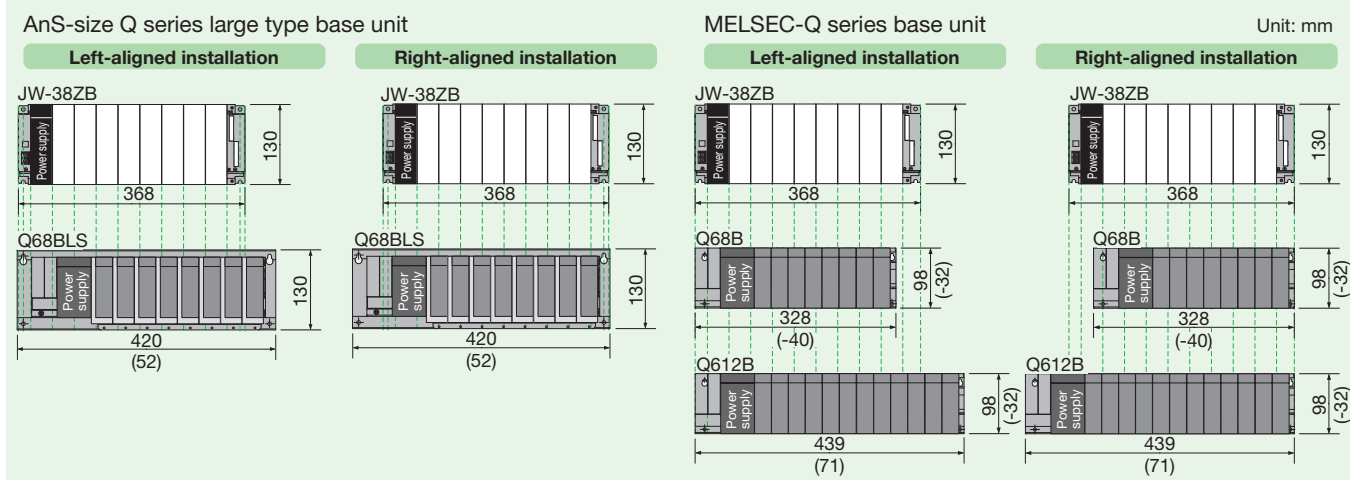

MELSEC-Q series base unit

Unit: mm

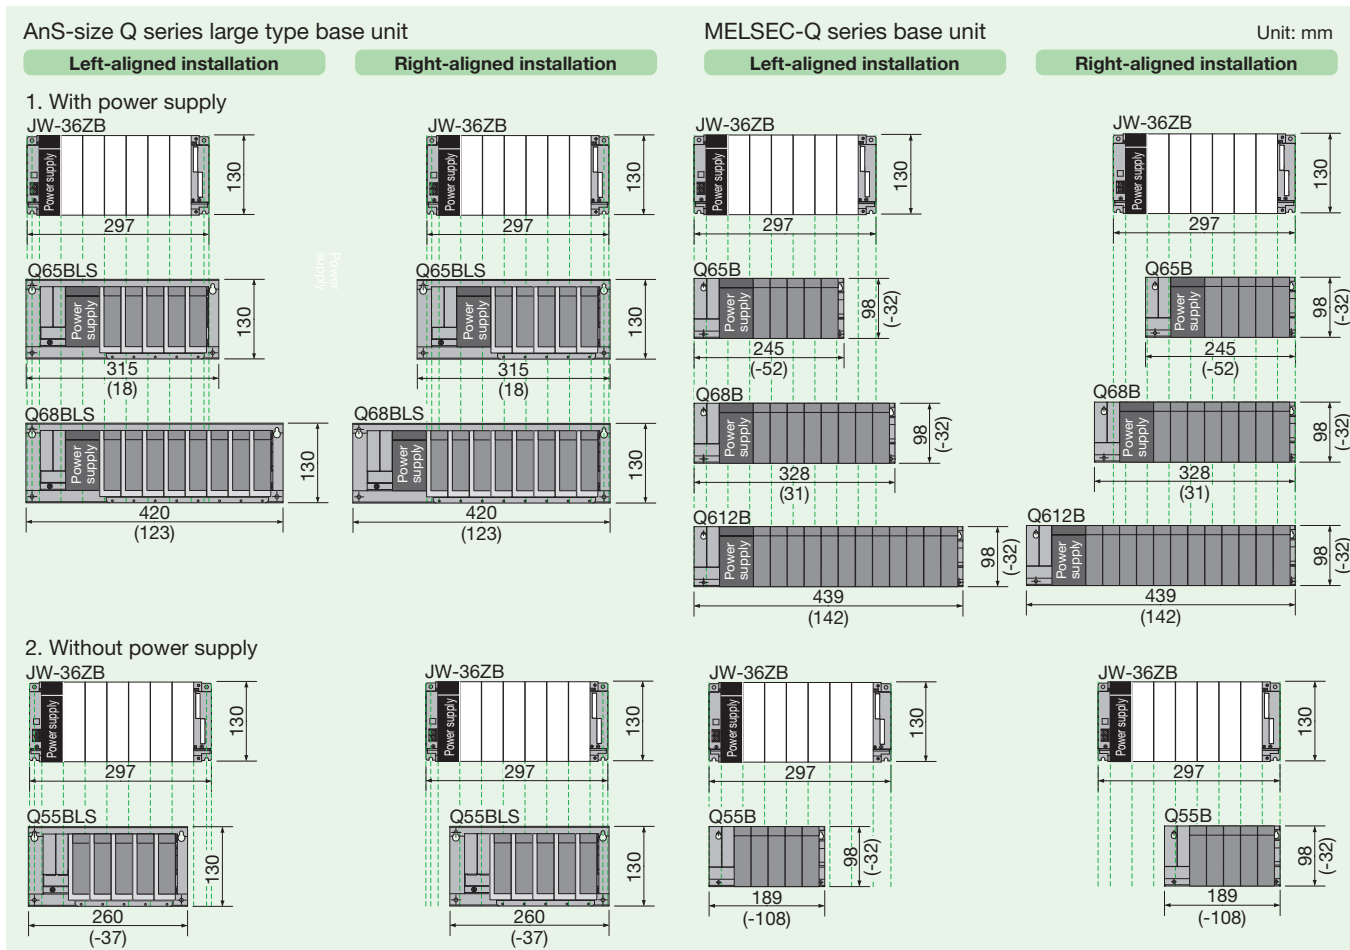

When using an extension base unit

(1) JW-38ZB → Q68BLS / Q68B, Q612B

(2) JW-36ZB → Q65BLS, Q68BLS / Q55BLS / Q65B, Q68B, Q612B / Q55B

(3) JW-34ZB → Q65BLS, Q68BLS / Q55BLS / Q63B, Q65B, Q68B / Q52B, Q55B

Usage Precautions

Module Width

We recommend that you use the Mitsubishi Electric AnS-size Q series large type base unit (wiring space of 34.5mm) if wiring in the following scenario (1) causes interference with other mounted modules.

- (1) Since the width of MELSEC-Q series modules is smaller (New Satellite JW Series: 35mm → MELSEC-Q series: 27.4mm), the wiring area becomes smaller as well. Check the wiring area when mounting a conversion adapter.

- (2) If the wiring causes interference with adjacent modules, take an action such as lifting the wiring forward to prevent interference.

- (3) If interference still occurs even when you lift the wiring, keep the next slot open to secure a space for wiring.

Depth

The following tables list the depth dimensions. The depth is larger, so verification is required for mounting.
The values in parentheses, which are 9mm smaller, represent the depth when the Mitsubishi Electric AnS-size Q series large type base unit is not used.

New Satellite JW : New Satellite JW Series

MELSEC-Q : MELSEC-Q series

Conversion adapter	ERNT-2JQ210NS		ERNT-2JQ212S	ERNT-2JQ234N264N ERNT-2JQ232S262S
MELSEC-Q series module	QX10/QX40/QX40-S1/ QX70/QX80/QY10	QY22	QY40P/QY50/QY70	QX41/QX41-S1/ QX41-S2/QX71/QY41H
Depth	137.5mm (128.5mm)	159.5mm (150.5mm)	137.5mm (128.5mm)	180.1mm (171.1mm)
Mounting diagram				

*: Each depth is measured from the panel surface.

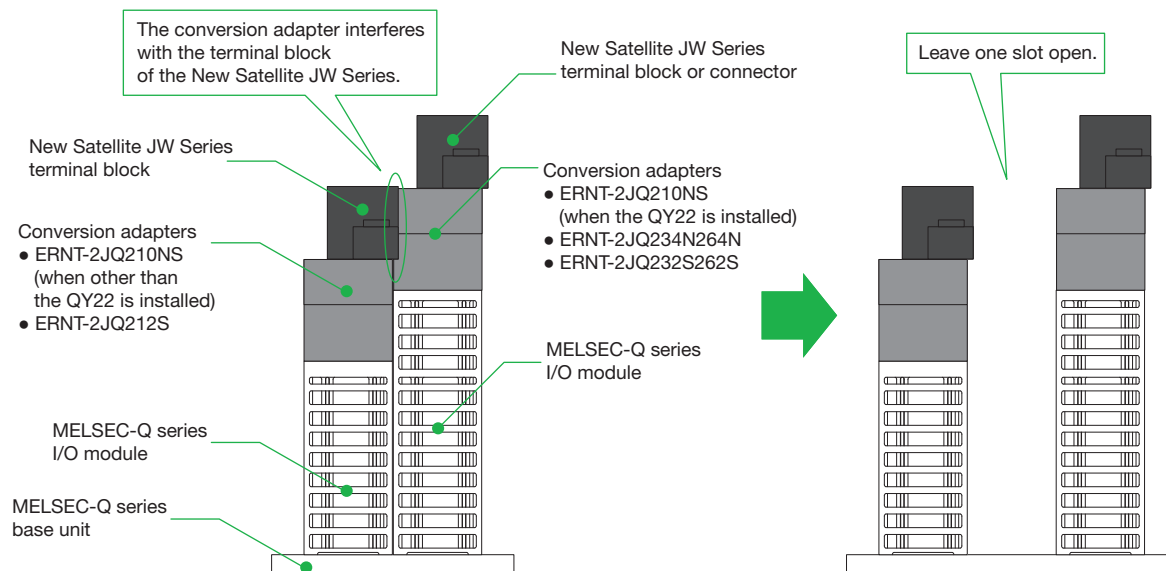

New Satellite JW Series: Base unit + Input/output modules + Terminal block (connector)

MELSEC-Q series + Upgrade tool: Base unit + Input/output modules + Conversion adapter + Terminal block (connector)

Check for Interference with Adjacent Modules

We recommend that you use the Mitsubishi Electric AnS-size Q series large type base unit because some combinations of adjacent conversion adapters cause interference of the terminal blocks.

Leave one slot open to prevent interference of the terminal blocks when the MELSEC-Q series base unit is used and the adjacent conversion adapters are as follows.

External Dimensions

Conversion Adapter

Model name:
ERNT-2JQ210NS

ERNT-2JQ232S262S

Upgrading from the MEMOCON-SC GL Series (2000 Series I/O) to the MELSEC-Q Series

■ Simplifies replacement with the MELSEC-Q series

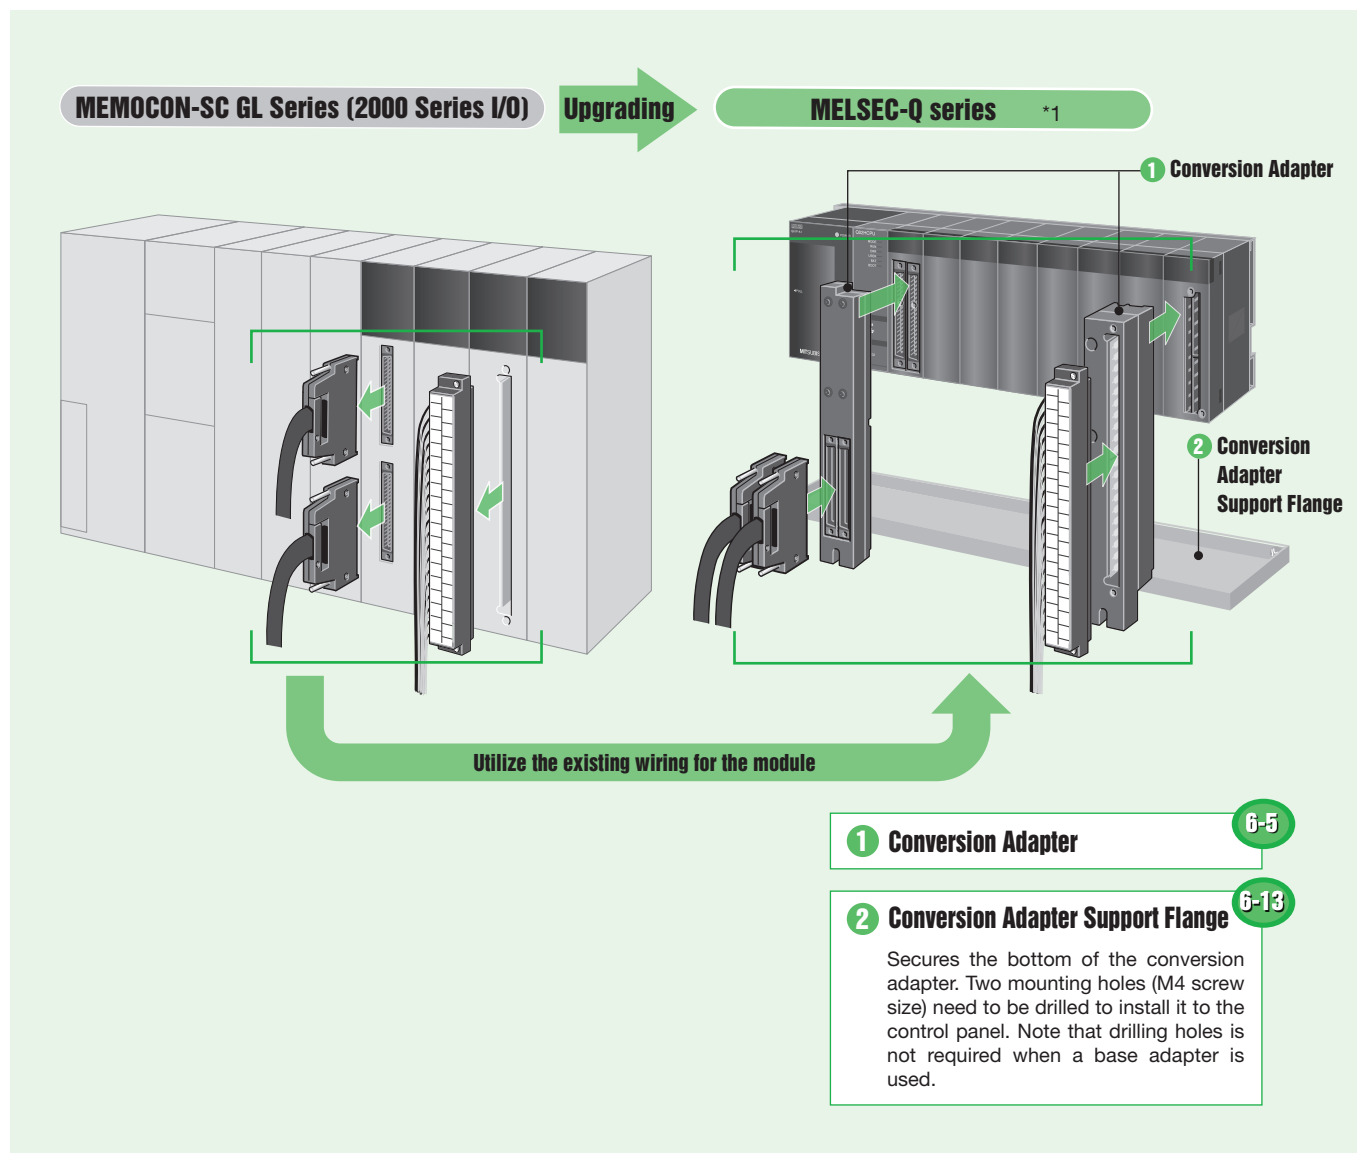

The upgrade tool makes it easy to replace YASKAWA PLC MEMOCON-SC GL Series I/O modules (2000 Series I/O) with Mitsubishi programmable controller MELSEC-Q series.

■ Significantly shortens the time required for input and output module wiring, and significantly reduces wiring errors

The upgrade tool allows you to connect the wiring connected to the MEMOCON-SC GL Series (2000 Series I/O) input and output modules as is to the MELSEC-Q series using a conversion adapter. (Some power supply and common terminal connection changes required.)

Product Overview

This upgrade tool comprises a "conversion adapter" that is used to transfer the existing wiring of YASKAWA PLC MEMOCON-SC GL Series (GL40S/60S/60H/70H) input/output modules (2000 Series I/O) to the Mitsubishi programmable controller MELSEC-Q series input/output modules, and a "conversion adapter support flange" that is used to secure the conversion adapter at the bottom.

*1: When replacing YASKAWA Electric PLC MEMOCON-SC GL Series (GL40S/60S/60H/70H) input/output modules (2000 Series I/O) with Mitsubishi programmable controller MELSEC-Q series, verification of the mounting is required due to the change in module width and depth dimensions. There may be a case that the terminal block of the conversion adapter interferes with the adjacent conversion adapter. For details, refer to "Usage Precautions" on page 6-28 in this catalog.

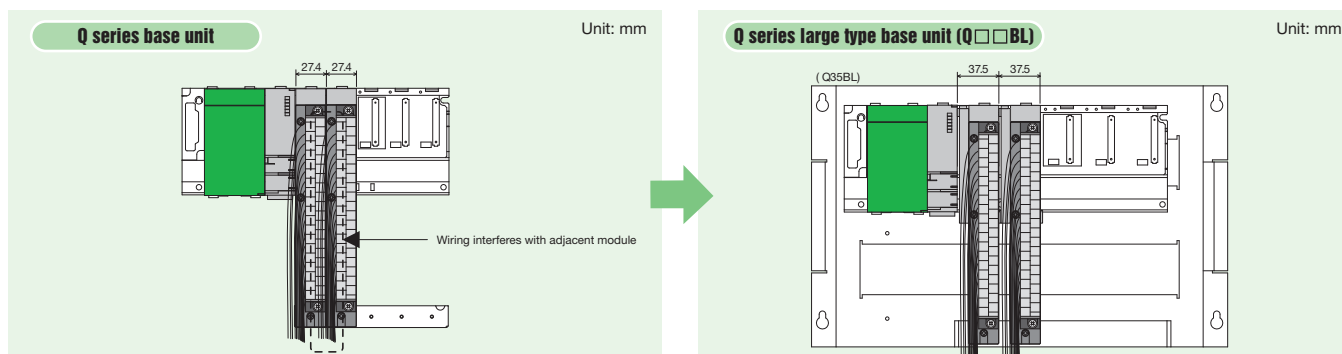

MITSUBISHI ELECTRIC CORPORATION

Upgrading using the Q series large type base unit

Using the Mitsubishi Electric Q series large type base unit (Q□□BL) eliminates the need to secure wiring space and check for interference between adjacent conversion adapter terminal blocks.

Note that the pitch of mounting holes in some models are similar to that in the GL Series, and therefore mounting positions must be reconsidered.

- If the wiring interferes with an adjacent module, wiring space can be secured by utilizing the Q series large type base unit.

- If the terminal block of a conversion adapter interferes with the adjacent conversion adapter, interference can be avoided by using the Q series large type base unit.

- Q series large type base unit configuration

- The 2-slot type conversion adapter is not applicable.
- For details on mounting dimensions, refer to page 6-18 in this catalog.

Q Series Large Type Base Unit List

Model	Description	Number of slots
Q38BL	Main base unit	8
Q35BL		5
Q68BL	Extension base unit with power supply	8
Q65BL		5
Q55BL	Extension base unit without power supply	5

Q Series Large Type Blank Cover

Model	Description
QG69L	Used to adjust gaps between modules

Model List

1 Conversion adapter

When selecting a conversion adapter, be sure to refer to the module specification comparison charts and notes on pages 6-5 to 6-12. These pages describe precautions such as differences in the number of points per common. For detailed specifications and general specifications not described in the module specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the MEMOCON-SC GL Series (2000 Series I/O) and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

For Input/Output Modules

[1-slot type] (Applicable to MELSEC-Q series large type base units (Q□□BL) as well)

Input/Output	MEMOCON-SC GL Series (2000 Series I/O) module model before replacement	MELSEC-Q series module model after replacement	Conversion adapter				Page
			Model	Shape		No. of input/ output points	
				2000 Series I/O	MELSEC-Q series		
Input	JAMSC-B2501A	QX10	ERNT-1Y2Q501	Terminal block (20 points)	Terminal block (18 points)	16	6-5

*1: A conversion adapter for replacing SHARP JW Series modules (large type) with MELSEC-Q series must be used.

*2: A conversion adapter for replacing OMRON SYSMAC C series modules with MELSEC-Q series must be used.

*3: Consider rewiring to the QX80 if the existing module uses the 24VDC negative common. Also consider using the ERNT-AQTB20 in such cases.

*4: Consider rewiring to the QX81 or QX81-S2 if the existing module uses the 24VDC negative common. Also consider using the ERNT-AQTB38-E in such cases.

*5: Consider rewiring to two QX81s or two QX81-S2s if the existing module uses the 24VDC negative common.

*6: Consider rewiring to the QY50 (0.5A, 16 points) or QY68A (2A, 8 points) if current capacity is required. Also consider using the ERNT-AQTB20 in such cases.

*7: Consider rewiring to the QX40H or QX80H if the existing module uses different power supplies for each 8-point group. Also consider using the ERNT-AQTB20 in such cases.

*8: Consider rewiring to two QX40Hs or two QX80Hs if the existing module uses different power supplies for each 8-point group. Also consider using the ERNT-AQTB20 in such cases.

[2-slot type] (Not applicable to MELSEC-Q series large type base units (Q□□BL))

	JAMSC-B2914								

*9: A conversion adapter for replacing SHARP JW Series modules (large type) with MELSEC-Q series must be used.

☆ Universal conversion adapter (*Requires rewiring. For details, refer to page 7-1 in this catalog.)

Input/output modules in the table below do not support the use of a conversion adapter. These modules, however, can be replaced by using a universal conversion adapter even though rewiring is required. Check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.

For Input/Output Modules

Input/Output	MEMOCON-SC GL Series (2000 Series I/O) module model			MELSEC-Q series module model				Universal conversion adapter
	Model	Specifications	No. of points	Model	Specifications	No. of points	No. of required modules	
Input	JAMSC-B2503A	200VAC	16	QX28	100-240VAC	8	2	*10
	JAMSC-B2507A	200VAC	32	QX28	100-240VAC	8	4	*10
	JAMSC-B2912	100/200VAC, 24VDC	32	QY10	100-200VAC, 24VDC	16	2	*10
Output	JAMSC-B2610	48VDC sink type	16	There is no applicable MELSEC-Q series module.				
	JAMSC-B2624	5VDC sink type	64	QY41H	5/12/24VDC sink type	32	2	*10
	JAMSC-B2630	12/24VDC source type	16	QY80	12/24VDC source type	16	1	*10
	JAMSC-B2632	12/24VDC source type	32	QY81P	12/24VDC source type	32	1	*10

*10: The universal conversion adapter (refer to page 7-5) can be used for replacement.

2 Conversion adapter support flange (required)

The same conversion adapter support flange used to replace MELSEC-A series with MELSEC-Q series is used.

A conversion adapter support flange secures the bottom of a conversion adapter. One support flange is required per base unit when a conversion adapter is used.

Note

For panel surface installation, drilling screw holes (M4 screw, 2 locations) is required.

Note that drilling holes is not required when a base adapter is used.

Conversion adapter support flange model	Specifications	Page
ERNT-AQF12	12-slot conversion adapter support flange	6-13
ERNT-AQF8	8-slot conversion adapter support flange	
ERNT-AQF5	5-slot conversion adapter support flange	
ERNT-AQF3	3-slot conversion adapter support flange	

3 Base adapter

The same conversion adapter support flange used to replace MELSEC-A series with MELSEC-Q series is used.

Both the MELSEC-Q series base unit and the conversion adapter support flange can be installed on the base adapter without drilling screw holes.

For the base unit models marked with *1 to *5, two or more base adapter models are applicable.

Note

Two additional mounting holes (M5 screw) and four M5 screws need to be prepared by the user to install the base adapter to the control panel.

(Additional mounting holes are not required if the mounting dimensions before and after replacement are the same and the existing four mounting holes can be used.)

- Notes
1. In a case where the number of points per common changes from 8 (four circuits) to 32 and the terminal numbers TB9, TB18, TB27, and TB36 on the MEMOCON-SC GL Series (2000 Series I/O) side are used separately, a wiring change is required.
 2. For areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.
 3. For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the MEMOCON-SC GL Series (2000 Series I/O) and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.
 4. Consider rewiring to the QX81 or QX81-S2 if the existing module uses the 24VDC negative common. Also consider using the ERNT-AQTB38-E in such cases.
 5. Consider rewiring to two QX40Hs or two QX80Hs if the existing module uses different power supplies for each 8-point group. Also consider using the ERNT-AQTB20 in such cases.

- Notes
- The external power supply connected to the terminal numbers TB35 and TB36 on the MEMOCON-SC GL Series (2000 Series I/O) side is no longer required. Such devices may remain connected though as the conversion adapter is not wired internally for this connection.
 - The FG terminal connected to the terminal numbers TB37 and TB38 on the MEMOCON-SC GL Series (2000 Series I/O) side is no longer required. Such devices may remain connected though as the conversion adapter is not wired internally for this connection.
 - For areas, check that the specifications of MELSEC-Q series modules satisfy the specifications of devices and equipment to be connected.
 - For detailed specifications and general specifications not described in the specification comparison charts, refer to the user's manual for the module used. Note that the areas where the specifications differ between the MEMOCON-SC GL Series (2000 Series I/O) and the MELSEC-Q series are restricted in terms of specifications during replacement. Verify the specifications of the connected devices.

Conversion Adapter Support Flange (Required)

Specifications

A conversion adapter support flange secures the bottom of a conversion adapter. This is required when a conversion adapter is used. One support flange is required per base unit. The same support flange used to replace MELSEC-A series with MELSEC-Q series is used.

Conversion adapter support flange model	Specifications
ERNT-AQF12	Conversion adapter support flange for 12 slots of MELSEC-Q series modules
ERNT-AQF8	Conversion adapter support flange for 8 slots of MELSEC-Q series modules
ERNT-AQF5	Conversion adapter support flange for 5 slots of MELSEC-Q series modules
ERNT-AQF3	Conversion adapter support flange for 3 slots of MELSEC-Q series modules

When using a main base unit

• Q312B, Q38B, Q35B, Q33B

Unit: mm

Conversion adapter support flange	A (mm)
ERNT-AQF12	321.2
ERNT-AQF8	210
ERNT-AQF5	126.6
ERNT-AQF3	71

Drill screw holes (M4 screw, 2 locations) at these positions, and install the conversion adapter support flange.

When using an extension base unit

• Q612B, Q68B, Q65B, Q63B

Unit: mm

Conversion adapter support flange	A (mm)
ERNT-AQF12	321.2
ERNT-AQF8	210
ERNT-AQF5	126.6
ERNT-AQF3	71

Drill screw holes (M4 screw, 2 locations) at these positions, and install the conversion adapter support flange.

• Q55B

Unit: mm

Drill screw holes (M4 screw, 2 locations) at these positions, and install the conversion adapter support flange.

• Q52B

Unit: mm

Drill screw holes (M4 screw, 2 locations) at these positions, and install the conversion adapter support flange.

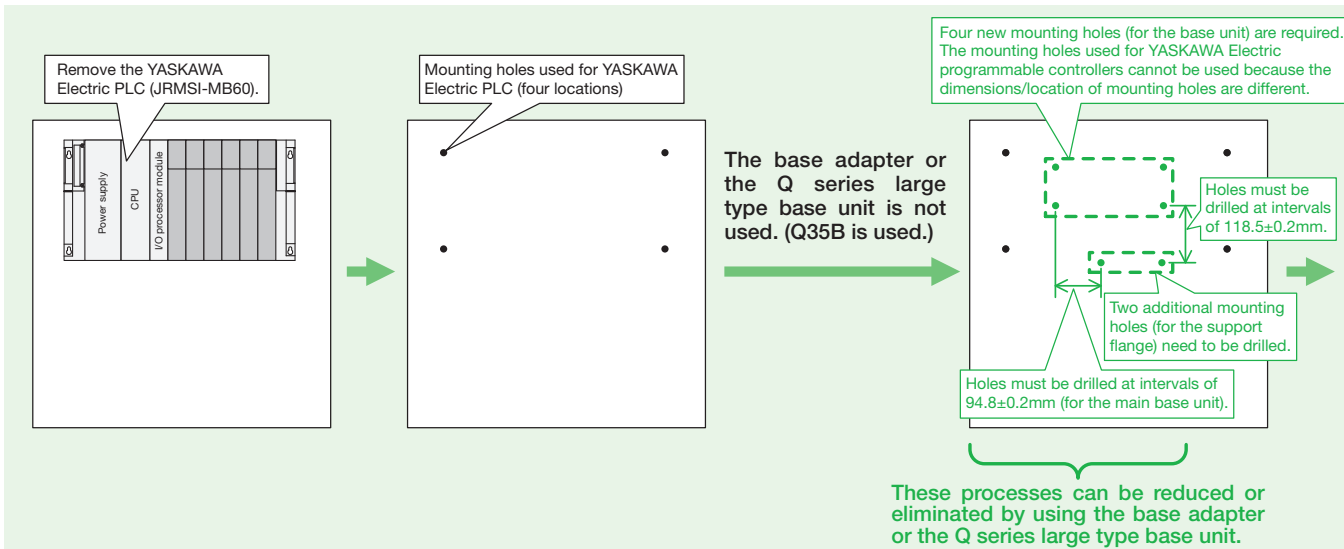

Memo

Upgrading Using the Base Adapter or the Q Series Large Type Base Unit (Manufactured by Mitsubishi Electric)

Using the base adapter or the Q series large type base unit eliminates the need to drill mounting holes and determine installation position of the support flange.

When the base adapter or the Q series large type base unit is not used

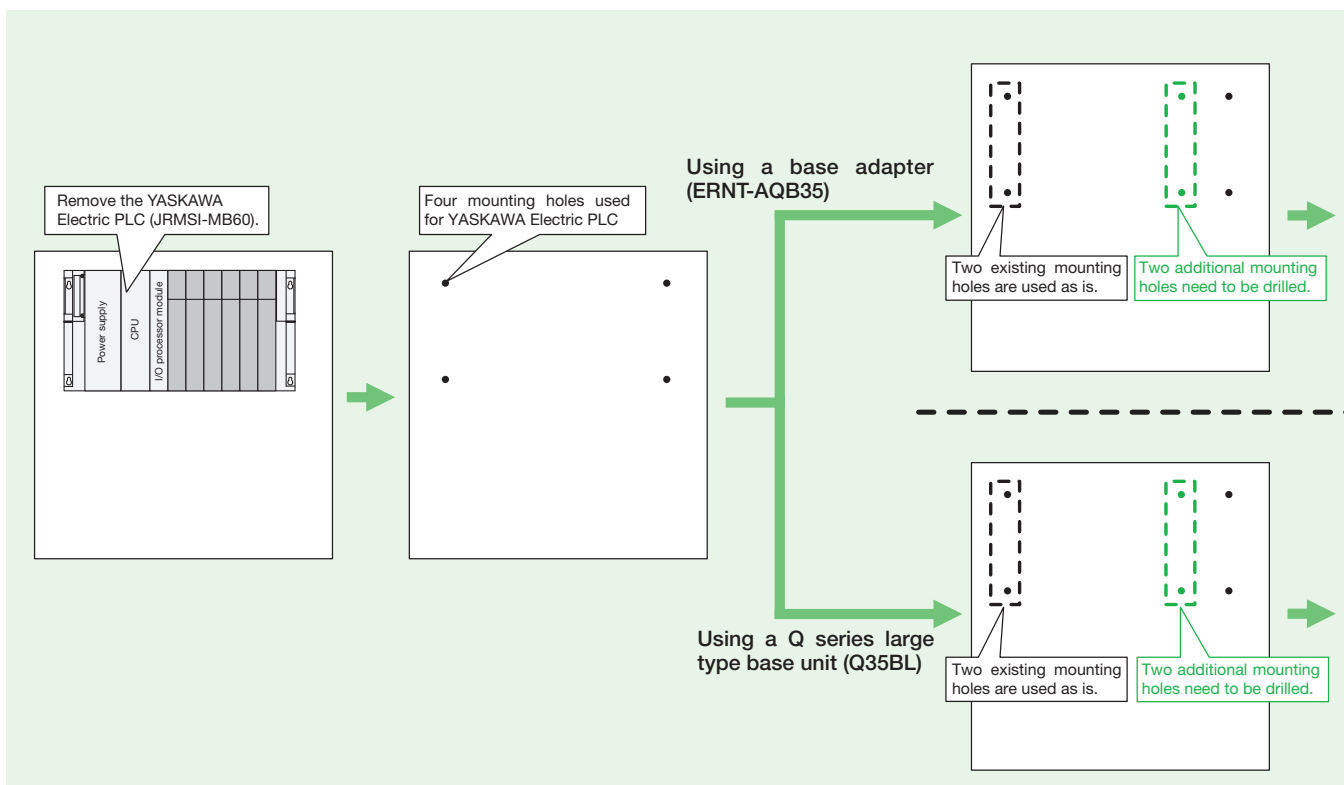

Six or seven new mounting holes are required and the installation positions of the Q series base unit and the support flange need to be determined.

When the base adapter or the Q series large type base unit (the same one used to replace MELSEC-A series [large type] with MELSEC-Q series) is used

Only a maximum of 2 holes must be drilled due to the base adapter or Q series large type base unit having the same mounting hole height dimensions as the GL Series base unit. (Additional mounting holes are not required if the mounting dimensions before and after replacement are the same and the existing four mounting holes can be used.)

The following figure shows the installation when two existing mounting holes on the left are used.

For details, refer to "Mounting Dimensions" on page 6-18, "Comparison of External Dimensions and Mounting Hole Dimensions for Replacements" on page 6-19, and "Slot Positions" on page 6-21.

Base Adapter

Specifications

Both the MELSEC-Q series base unit and the conversion adapter support flange can be installed on the base adapter without drilling screw holes.

The same base adapter used to replace MELSEC-A series with MELSEC-Q series is used.

Note

- Two additional mounting holes (M5 screw) and four M5 screws need to be prepared by the user to install the base adapter to the control panel. (Additional mounting holes are not required if the mounting dimensions before and after replacement are the same and the existing four mounting holes can be used.)

For the base unit models marked with *1 to *5, two or more base adapter models are applicable. Select the most suitable base adapter according to the product dimensions.

Base adapter model	Mountable product					Conversion adapter support flange	Product dimensions Width × Height (mm)
	MELSEC-Q series base unit

Mounting Dimensions

- The slot positions of modules differ between the MEMOCON-SC GL Series (2000 Series I/O) and the MELSEC-Q series. After replacement, adjust the length of cables.
- The height will be smaller after replacement.
(For the width and depth, refer to "Usage Precautions" on page 6-28.)
- Two of the four mounting holes of the base adapter and the Q series large type base unit are the same size as those of the MEMOCON-SC GL Series (2000 Series I/O) base unit, and therefore only two additional mounting holes need to be drilled on the control panel. (Additional mounting holes are not required if the mounting dimensions are the same before and after replacement and the existing four mounting holes can be used.)
- Base adapter + MELSEC-Q series base unit**

Base adapter model	Description	A	B	C	Mounting hole size
ERNT-AQB38	Main base unit	480	460	10	M5
ERNT-AQB35		382	362	10	
ERNT-AQB32		247	227	10	
ERNT-AQB68	Extension base unit with power supply	466	446	10	
ERNT-AQB65		352	332	10	
ERNT-AQB62		238	218	10	
ERNT-AQB55	Extension base unit without power supply	297	277	10	
ERNT-AQB52		183	163	10

Comparison of External Dimensions and Mounting Hole Dimensions for Replacements

Use the following tables to check the differences of external dimensions and mounting hole dimensions before and after replacement.

Notes

- "▲" indicates that the dimensions will be larger after replacement as shown in the example below. Reconsider the installation position.
- If there are not enough mounting slots, use an extension base unit.
- If your MEMOCON-SC GL Series (2000 Series I/O) model is not listed here, check the number of slots, external dimensions, mounting dimensions, and other specifications and then select the optimal base adapter or Q series large type base unit.

Example) Replacing the MEMOCON-SC GL Series (2000 Series I/O) (JRMSI-MB60S3) with the MELSEC-Q series large type base unit (Q35BL)

When using a main base unit

1. Replacing with the MELSEC-Q series base unit or MELSEC-Q series base unit + base adapter

◎: Same, ○: GL Series is larger, ▲: GL Series is smaller

Usage Precautions

Module Width

- (1) Since the width of MELSEC-Q series modules is smaller (MEMOCON-SC GL Series (2000 Series I/O): 37.3mm → MELSEC-Q series: 27.4mm), the wiring area becomes smaller as well. Check the wiring area when mounting a conversion adapter.

- (2) If the wiring causes interference with adjacent modules, take an action such as lifting the wiring forward to prevent interference.

- (3) If interference still occurs even when you lift the wiring, keep the next slot open to secure a space for wiring.

Example) Q312B

Mount a connector cover (accessory) or blank cover module (QG60) to prevent dust from entering the connector of a spare space where a module is not mounted.

- (4) If a problem still exist, consider using the Mitsubishi Electric Q series large type base unit (wiring space of 37.5mm).

Note: The 2-slot type conversion adapter is not applicable.

Depth

The depth dimensions are shown below. The depth dimensions are larger after replacement, and therefore a verification is required during installation.

The values in parentheses, which are 11.8mm smaller, represent the depth when a base adapter or MELSEC-Q series large type base unit is not used.

*: Each depth is measured from the panel surface.

(MEMOCON-SC GL Series (2000 Series I/O): Base unit + I/O module + Terminal block (connector), MELSEC-Q series + Upgrade tool: Base adapter + Base unit + I/O module + Conversion adapter + Terminal block (connector))

Check for Interference with Adjacent Modules

If the conversion adapter interferes with the adjacent conversion adapter, leave one slot open between them as shown below. Note that an open slot is not required when the MELSEC-Q series large type base unit is used because there will be a gap between modules.

Note: The 2-slot type conversion adapter is not applicable.

Conversion Adapter Support Flange / Base Adapter

When using a conversion adapter, the conversion adapter support flange is required. We recommend use of a base adapter that permits MELSEC-Q series installation using the mounting holes of the MEMOCON-SC GL Series (2000 Series I/O) (additional drilling of holes is not required).

Upgrading from a non-Mitsubishi programmable controller to the MELSEC-Q series

■ Universal conversion adapter

This universal conversion adapter reduces the burden of rewiring input/output modules (terminal block type) when replacing a non-Mitsubishi programmable controller with a MELSEC-Q series programmable controller manufactured by Mitsubishi Electric.

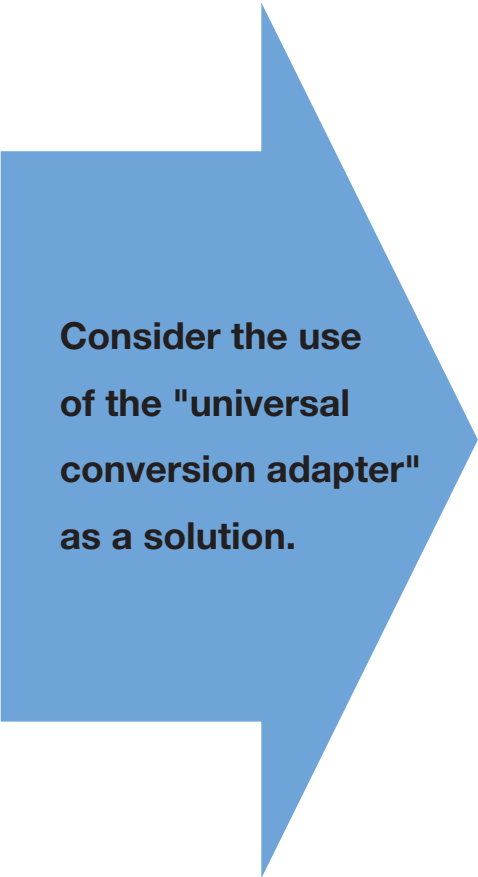

Product Overview

- When you want to replace a non-Mitsubishi programmable controller (terminal block type) with the MELSEC-Q series (terminal block type), but there is a problem

- When you want to replace a non-Mitsubishi programmable controller (terminal block type) with the MELSEC-Q series (connector type), but there is a problem

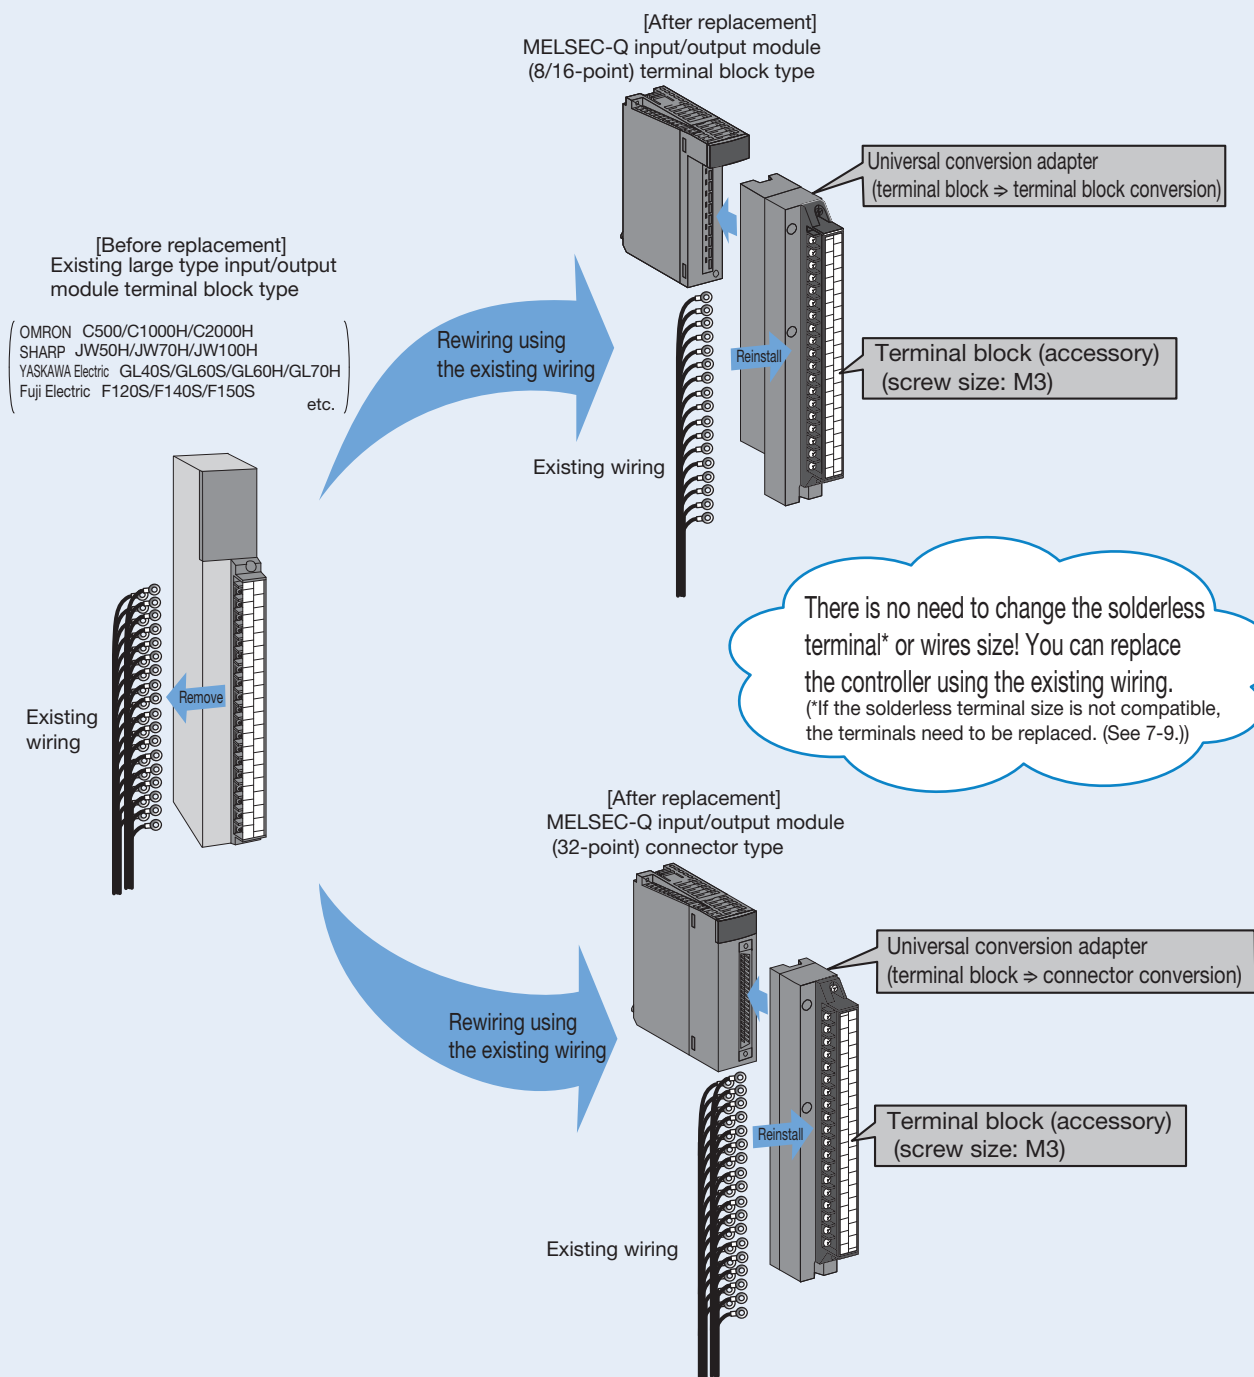

Consider the use of the "universal conversion adapter" as a solution.

If the specifications of your existing connected devices satisfy MELSEC-Q series input/output module specifications, you can use the universal conversion adapter for replacement, regardless of the manufacturer of the existing programmable controller!

Note that this product (universal conversion adapter) is designed under the premises that rewiring (reinstallation of existing wiring to the terminal block) will be performed by the user.

No more frustrations when replacing your non-Mitsubishi programmable controller with the Mitsubishi MELSEC-Q series!

When replacing a non-Mitsubishi programmable controller (large type) with the MELSEC-Q series

When replacing a non-Mitsubishi programmable controller (small type) with the MELSEC-Q series

There is no need to change the solderless terminal* or wires size! You can replace the controller using the existing wiring.
(*If the solderless terminal size is not compatible, the terminals need to be replaced. (See 7-9.))

The universal conversion adapter can be also used to...

- Replace the MELSEC-A series, MELSEC-AnS series, or SYSMAC C series modules, for which conventional conversion adapters are incompatible, with the MELSEC-Q series.
- When the existing connected devices are used with a module with the specification of 8 points/common, a common separation module "QX40H/QX70H/QX80H/QX90H" can be used as replacement.

MELSEC-A series / MELSEC-Q series

<Modules for which conventional conversion adapters are incompatible>

Input/Output	MELSEC-A series module before replacement			MELSEC-Q series module after replacement			
	Model	Specifications*	No. of points	Model	Specifications*	No. of points	No. of required modules
Input	AX20(-UL)	200-240VAC	16 points	QX28	100-240VAC	8 points	2 modules

Point

Verify that the MELSEC-Q series module specifications satisfy the specifications of the connected devices and equipment.

Utilizing the Mitsubishi Electric Q series / AnS-size Q series large type base unit

If this is smaller than the width of the existing module, a wiring interference may occur with adjacent modules due to a narrow wiring space. The Mitsubishi Electric Q series large type base unit (Q□□BL) or AnS-size Q series large type base unit (Q□□BLS, Q□□BLS-D) can be used to secure a wider space and alleviate the interference.

List of the Q series large type base units

Memo

This image shows a single sheet of white paper with horizontal blue ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Replacement flow

(1) Remove the existing wiring from the terminal block of the existing module.

(2) Check the solderless terminal.

- Check the dimensions of the solderless terminal.
- If the solderless terminal is not compatible, the terminal needs to be changed.

Universal conversion adapter for the large type

• Applicable solderless terminal

Unit: mm

Round non-insulated solderless terminal

Round insulated solderless terminal

Y-shaped non-insulated solderless terminal

Y-shaped insulated solderless terminal

*The minimum length is 4.75 mm when the solderless terminal is attached up side down as shown on the right.

• Terminal block shape

Unit: mm

Universal conversion adapter for the small type

• Applicable solderless terminal

Unit: mm

Round non-insulated solderless terminal

Round insulated solderless terminal

Y-shaped non-insulated solderless terminal

Y-shaped insulated solderless terminal

*The minimum length is 5.0 mm when the solderless terminal is attached up side down as shown on the right.

• Terminal block shape

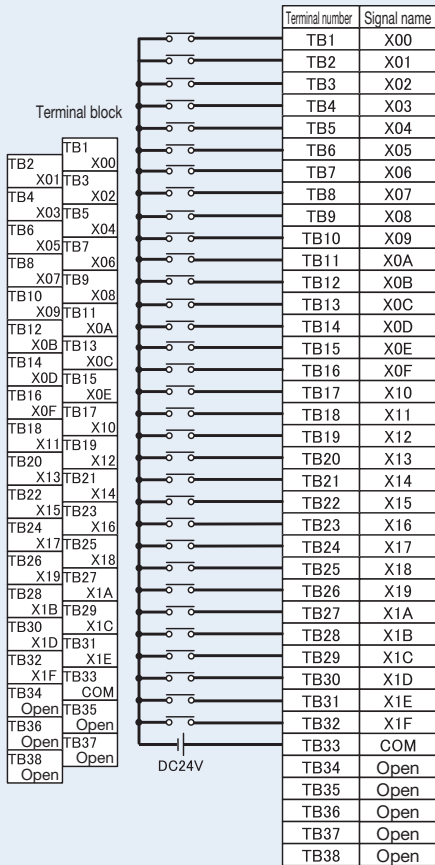

Unit: mm

(3) Reinstall the existing wiring to the terminal block of the universal conversion adapter.

Check the external connection diagram of each MELSEC-Q series module to be used, and reinstall the existing wiring to the terminal block of the universal conversion adapter.

External connection diagram (example)

* After replacement, connect the wires in accordance with the terminal numbers and signal names when the universal conversion adapter was used.

* Depending on the difference in the number of points per common, such as a change from 8 points/common to 16 points/common, connection changes on the connected device (switch, etc.) side may be required.

* When any wires are left unconnected, connect them to open terminals or insulate them.

Schematic Diagram for Replacing a Non-Mitsubishi Programmable Controller (Large Type) with the MELSEC-Q Series

Non-Mitsubishi programmable controller (large type)

OMRON	C500/C1000H/C2000H
SHARP	JW50H/JW70H/JW100H
YASKAWA Electric	GL40S/GL60S/GL60H/GL70H
Fuji Electric	F120S/F140S/F150S etc.

Replace

MELSEC-Q series

Rewiring using the existing wiring of the terminal block type input/output module

* Use the terminal block provided as an accessory with the universal conversion adapter (38-point terminal block).

1 Universal conversion adapter (large type)

7-15

Signals of the MELSEC-Q series module are directly indicated on the terminal block.

2 Conversion adapter support flange

7-29

Secure the bottom of the conversion adapter. For panel surface installation, however, drilling screw holes (M4 screw, 2 locations) is required. Note that drilling screw holes is not required when a base adapter is used.

3 Base adapter

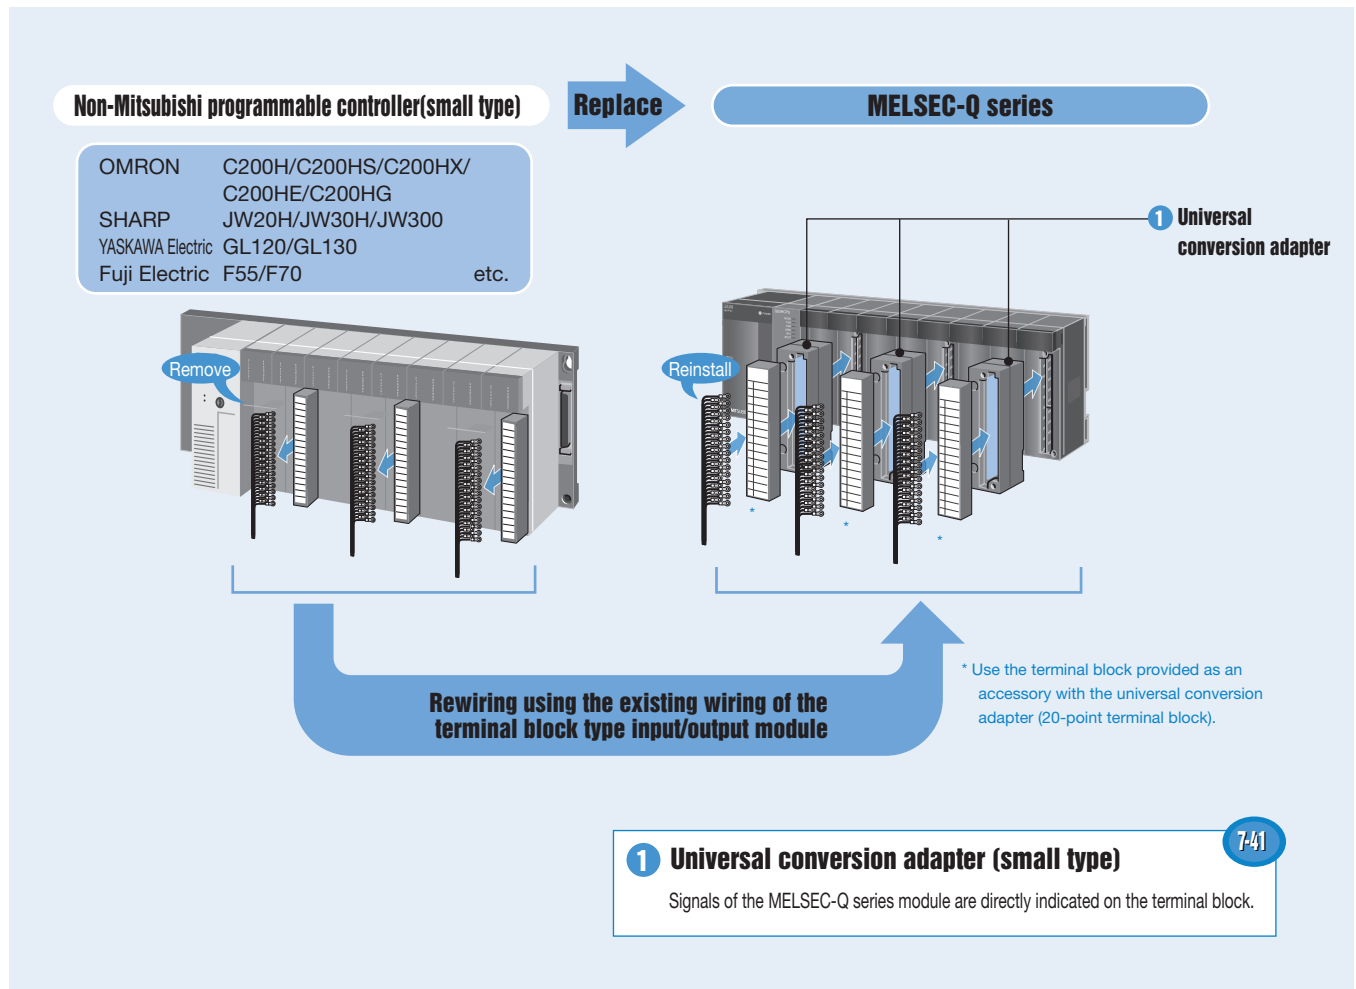

7-31

The MELSEC-Q series base unit and conversion adapter support flange can be installed simultaneously without drilling screw holes (six locations). However, the user has to drill screw holes (M5 screws) and obtain four M5 screws for panel surface installation.

Point

The universal conversion adapter (large type) can be used in the system after replacing the MELSEC-A series or SYSMAC C series with the MELSEC-Q series using the upgrade tool. The universal conversion adapter can be also used with Mitsubishi Electric Q series large type base units (Q□□BL).

Schematic Diagram for Replacing a Non-Mitsubishi Programmable Controller (Small Type) with the MELSEC-Q Series

Point

The universal conversion adapter (small type) can be used in the system after replacing the MELSEC-AnS series with the MELSEC-Q series using the upgrade tool. The universal conversion adapter can be also used with the Mitsubishi Electric AnS-size Q series large type base units (Q□□BLS, Q□□BLS-D).

Replacing a Non-Mitsubishi Programmable Controller (Large Type) with the MELSEC-Q Series

Model List

1 Universal Conversion Adapter (Large Type)

Verify that the MELSEC-Q series module electrical specifications satisfy the specifications of existing connected devices.

For input/output module

<1-slot type>(Attachable to the Mitsubishi Electric Q series large type base unit (Q□□BL) as well)

*The terminal block provided as an accessory is a 38-point terminal block.

Point

The universal conversion adapter (large type) can be used in the system after replacing the MELSEC-A series or SYSMAC C series with the MELSEC-Q series using the upgrade tool.

2 Conversion Adapter Support Flange (Required)

The product used is the same as the upgrade tool for the MELSEC-A/MELSEC-Q series. The support flange secures the bottom of the conversion adapter. One support flange is required per base unit.

Note

- For panel surface installation, drilling screw holes (M4 screw, 2 locations) is required. Drilling screw holes is not required when a base adapter is used.

Conversion adapter support flange model	Specifications	Page
ERNT-AQF12	12-slot conversion adapter support flange	7-29 to 7-30
ERNT-AQF8	8-slot conversion adapter support flange	
ERNT-AQF5	5-slot conversion adapter support flange	
ERNT-AQF3	3-slot conversion adapter support flange	

3 Base Adapter

The product used is the same as the upgrade tool for the MELSEC-A/MELSEC-Q series. Both the MELSEC-Q series base unit and the conversion adapter support flange can be installed on the base adapter without drilling screw holes. For the base unit models marked with *1 to *5, two or more base adapter models are applicable. Select the most suitable base adapter according to the product dimensions.

Note

- The user has to drill screw holes (M5 screw, 4 locations) and obtain four M5 screws for panel surface installation.

Model	QX28
Specifications	
No. of input points	8 points
Isolation method	Photocoupler isolation
Rated input voltage	100-240VAC (+10/-15%) 50/60Hz (±3Hz)
Rated input current	Approx. 17mA (200VAC, 60Hz), Approx. 14mA (200VAC, 50Hz) Approx. 8mA (100VAC, 60Hz), Approx. 7mA (100VAC, 50Hz)
Inrush current	950mA, maximum, within 1ms (264VAC)
ON voltage / ON current	80VAC or more / 5mA or more (50Hz, 60Hz)
OFF voltage / OFF current	30VAC or less / 1.7mA or less (50Hz, 60Hz)
Input impedance	Approx 12kΩ (60Hz) Approx 15kΩ (50Hz)
Response time	OFF→ON 10ms or less (100VAC 50Hz, 60Hz) ON→OFF 15ms or less (100VAC 50Hz, 60Hz)
Internal current consumption	50mA (TYP. All points ON)
Wiring method for common	8 points/common

Model	QX40 (positive common)	QX40-S1 (positive common)
Specifications		
No. of input points	16 points	16 points
Isolation method	Photocoupler isolation	Photocoupler isolation
Rated input voltage	24VDC (+20/-15%)	24VDC (+20/-15%)
Rated input current	Approx. 4mA	Approx. 6mA
ON voltage / ON current	19V or more / 3mA or more	19V or more / 4.0mA or more
OFF voltage / OFF current	11V or less / 1.7mA or less	11V or less / 1.7mA or less
Input resistance	Approx. 5.6kΩ	Approx. 3.9kΩ
Response time	OFF→ON 1/5/10/20/70ms or less ON→OFF 1/5/10/20/70ms or less	0.1/0.2/0.4/0.6/1ms or less 0.1/0.2/0.4/0.6/1ms or less

Conversion Adapter Support Flange (Required)

Specifications

The conversion adapter support flange secures the bottom of the conversion adapter and is thus required during conversion adapter use. One support flange is required per base unit. The product used is the same as the upgrade tool for the MELSEC-A/MELSEC-Q series.

Conversion adapter support flange model	Specifications
ERNT-AQF12	Conversion adapter support flange for 12-slot MELSEC-Q series modules
ERNT-AQF8	Conversion adapter support flange for 8-slot MELSEC-Q series modules
ERNT-AQF5	Conversion adapter support flange for 5-slot MELSEC-Q series modules
ERNT-AQF3	Conversion adapter support flange for 3-slot MELSEC-Q series modules

When the base adapter is not used

When the base adapter is not used, drilling screw holes (M4 screw, 2 locations) is required for attaching the conversion adapter support flange as shown below. Be sure to always use the conversion adapter support flange.

When a main base unit is used

◎For Q312B, Q38B, Q35B, and Q33B

Unit: mm

Conversion adapter support flange	A
ERNT-AQF12	321.2
ERNT-AQF8	210
ERNT-AQF5	126.6
ERNT-AQF3	71

Drill screw holes (M4 screw, 2 locations), and install the conversion adapter support flange.

When an extension base unit is used

◎For Q612B, Q68B, Q65B, Q63B

Unit: mm

Conversion adapter support flange	A
ERNT-AQF12	321.2
ERNT-AQF8	210
ERNT-AQF5	126.6
ERNT-AQF3	71

Drill screw holes (M4 screw, 2 locations), and install the conversion adapter support flange.

©For Q55B

Unit: mm

Drill screw holes (M4 screw, 2 locations), and install the conversion adapter support flange.

©For Q52B

Unit: mm

Drill screw holes (M4 screw, 2 locations), and install the conversion adapter support flange.

Base Adapter

Specifications

Both the MELSEC-Q series base unit and the conversion adapter support flange can be installed on the base adapter without drilling screw holes. The product used is the same as the upgrade tool for the MELSEC-A/MELSEC-Q series.

Note

- The user has to drill screw holes (M5 screw, 4 locations) and obtain four M5 screws for panel surface installation.

For the base unit models marked with *1 to *5, two or more base adapter models are applicable. Select the most suitable base adapter according to the product dimensions.

ERNT-AQB52	183	163	10

Usage Precautions

Verify that the MELSEC-Q series module specifications satisfy the specifications of the existing connected devices.
Refer to the user's manual of the applicable MELSEC-Q series module.

Module Width

(1) The module width dimension is smaller (27.4 mm) and the wiring area is smaller, requiring verification during mounting.

(2) If the wiring interferes with a mounted module, lift the wiring forward, etc., so that there is no interference.

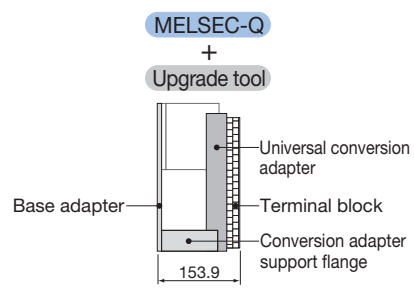

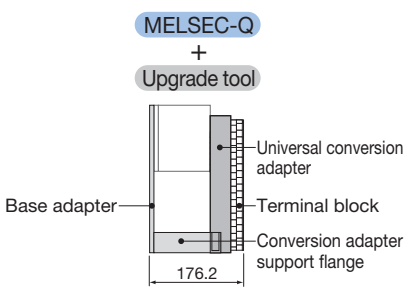

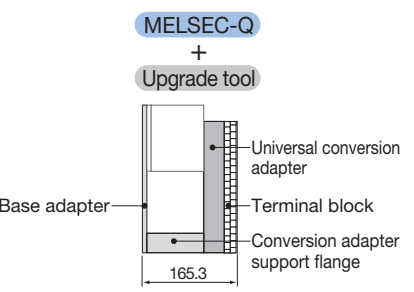

(3) If interference still occurs even when you lift the wiring, open up a slot to secure a space for wiring.

(4) If replacement is not possible based on 2) or 3) on the left, consider using the Mitsubishi Electric Q series large type base unit.

Depth

The depth dimension is as shown below. The depth is larger, requiring verification during mounting. If a base adapter is not used, the dimension is the value in parentheses (11.8 mm smaller).

Universal conversion adapter			
	ERNT-AQTB20	ERNT-AQTB20-S1	ERNT-AQTB38 ERNT-AQTB38-E
Depth	153.9mm (142.1mm)	176.2mm (164.4mm)	165.3mm (153.5mm)
Mounting diagram			

Conversion Adapter Support Flange / Base Adapter

When using the universal conversion adapter, always use a conversion adapter support flange.

Also, it is recommended to use a base adapter, which enables installation of both the MELSEC-Q series base unit and the conversion adapter support flange without drilling screw holes.

Slot Positions

When you use the MELSEC-Q series for replacement, the slot positions are as shown below. Change the slot positions where modules are mounted and adjust the wiring lengths prior to use.

(1)ERNT-AQB38

(4)ERNT-AQB68

(2)ERNT-AQB35

(5)ERNT-AQB65

(3)ERNT-AQB32

(6)ERNT-AQB62

(9)ERNT-AQB52

(7)ERNT-AQB58

(8)ERNT-AQB55

External Dimensions

Universal Conversion Adapter

Model:
ERNT-AQTB20

Conversion adapter

Unit: mm
Mounting bracket Terminal block

Weight: 250g

Model:
ERNT-AQTB20-S1

Conversion adapter

Unit: mm
Mounting bracket Terminal block

Weight: 265g

Model:
ERNT-AQTB38

Model:
ERNT-AQTB38-E

Base Adapter

The product used is the same as the upgrade tool for the MELSEC-A/MELSEC-Q series. See 1-37.

Conversion Adapter Support Flange

The product used is the same as the upgrade tool for the MELSEC-A/MELSEC-Q series. See 1-37.

Replacing a Non-Mitsubishi Programmable Controller (Small Type) with the MELSEC-Q Series

Model List

1 Universal Conversion Adapter (Small Type)

Verify that the MELSEC-Q series module electrical specifications satisfy the specifications of existing connected devices.

For input/output module

<1-slot type> (Attachable to the Mitsubishi Electric AnS-size Q series large type base units (Q□□BLS, Q□□BLS-D) as well.)

Input/Output	MELSEC-Q series module model before replacement	Conversion adapter		Page
		Model	Shape Terminal block (accessory) MELSEC-Q series	
Input	QX10	ERNT-ASQTB20	Terminal block (20 points) → Terminal block (18 points)	7-41 to 7-47
	QX28			
	QX40			
	QX40-S1			
	QX40H			
	QX50			
	QX70			
	QX70H			
	QX80			
	QX80H			
	QX90H			
Output module	QY10	ERNT-ASQTB20	Terminal block (20 points) → Terminal block (18 points)	7-41 to 7-47
	QY18A			
	QY22			
	QY40P			
	QY50			
	QY68A			
Input/Output combination	QY70			
	QY80			
Input/Output combination		QX48Y57		

Point

The universal conversion adapter (small type) can be used in the system after replacing the MELSEC-AnS series with the MELSEC-Q series using the upgrade tool.

Universal Conversion Adapter

Specifications

20-point terminal block specifications

●Applicable solderless terminal

Unit: mm

Round non-insulated solderless terminal

Round insulated solderless terminal

Y-shaped non-insulated solderless terminal

Y-shaped insulated solderless terminal

* The minimum length is 5.0 mm when the solderless terminal is attached up side down as shown on the right.

●Terminal block shape

Unit: mm

MELSEC-Q module specifications

**QY68A
+
ERNT-ASQTB20**

Model	QY68A (Sink/Source type)
Specifications	
No. of output points	8 points
Isolation method	Photocoupler isolation
Rated load voltage	5-24VDC (+20/-10%)
Maximum load current	2A/point, 8A/module
Maximum inrush current	8A 10ms or less
Leakage current at OFF	0.1mA or less
Maximum voltage drop at ON	0.3VDC(MAX.)2A
Response time	OFF→ON 3ms or less ON→OFF 10ms or less (resistance load)
Surge suppressor	Zener diode
Fuse	No
Protection function	No
Internal current consumption	110mA (TYP. All points ON)
Wiring method for common	All points independent

**QY70
+
ERNT-ASQTB20**

Model	QY70 (Sink type)
Specifications	
No. of output points	16 points
Isolation method	Photocoupler isolation
Rated load voltage	5-12VDC (+25/-10%)
Maximum load current	16mA/point, 256mA/common
Maximum inrush current	40mA 10ms or less
Leakage current at OFF	VOH:3.5VDC (VCC=5VDC, IOH=0.4mA)
Maximum voltage drop at ON	VOL:0.3VDC
Response time	OFF→ON 0.5ms or less ON→OFF 0.5ms or less (resistance load)
Surge suppressor	No
Fuse	1.6A (not replaceable) (fuse breaking capacity: 50A)
Protection function	No
Internal current consumption	95mA (TYP. All points ON)
Wiring method for common	16 points/common

**QY80
+
ERNT-ASQTB20**

Model	QY80 (Source type)
Specifications	
No. of output points	16 points
Isolation method	Photocoupler isolation
Rated load voltage	12-24VDC (+20/-15%)
Maximum load current	0.5A/point, 4A/common
Maximum inrush current	4A 10ms or less
Leakage current at OFF	0.1mA or less
Maximum voltage drop at ON	0.2VDC(TYP.)0.5A 0.3VDC(MAX.)0.5A
Response time	OFF→ON 1ms or less ON→OFF 1ms or less (rated load, resistance load)
Surge suppressor	Zener diode
Fuse	6.7A (not replaceable) (fuse breaking capacity: 50A)
Protection function	No
Internal current consumption	80mA (TYP. All points ON)
Wiring method for common	16 points/common

<Input specifications>

Specifications	Model	QX48Y57 (positive common)
No. of input points		8 points
Isolation method		Photocoupler isolation
Rated input voltage		24VDC(+20/-15%)
Rated input current		Approx. 4mA
ON voltage / ON current		19V or more / 3mA or more
OFF voltage / OFF current		11V or less / 1.7mA or less
Input resistance		Approx. 5.6kΩ
Response time	OFF→ON	1/5/10/20/70ms or less
	ON→OFF	1/5/10/20/70ms or less
Internal current consumption		80mA (TYP. All points ON)
Wiring method for common		8 points/common

<Output specifications>

Specifications	Model	QX48Y57 (Sink type)
No. of output points		7 points
Isolation method		Photocoupler isolation
Rated load voltage		12-24VDC (+20/-15%)
Maximum load current		0.5A/point, 2A/common
Maximum inrush current		4A 10ms or less
Leakage current at OFF		0.1mA or less
Maximum voltage drop at ON		0.2VDC(TYP.)0.5A 0.3VDC(MAX.)0.5A
Response time	OFF→ON	1ms or less
	ON→OFF	1ms or less (rated load, resistance load)
Surge suppressor		Zener diode
Fuse		4A (not replaceable (fuse breaking capacity: 50A)
Protection function		No
Wiring method for common		7 points/common

Usage Precautions

Verify that the MELSEC-Q series module specifications satisfy the specifications of the existing connected devices. Refer to the user's manual of the applicable MELSEC-Q series module.

Module Width

- (1) The module width is 27.4mm. Check the conditions for securing an enough wiring space for installation.

- (2) If the wiring interferes with a mounted module, lift the wiring forward, etc., so that there is no interference.

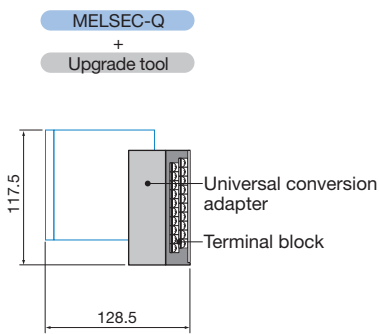

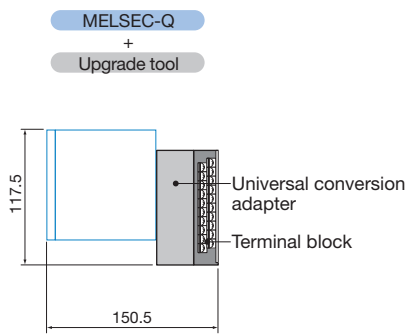

- (3) If interference still occurs even when you lift the wiring, open up a slot to secure a space for wiring.

- (4) If replacement is not possible based on 2) or 3) on the left, consider using the Mitsubishi Electric AnS-size Q series large type base unit. ▶ 7-7

		ERNT-ASQTY60	
		ERNT-ASQTY60E	
Analog / High-speed counter / Temperature input module conversion adapter	1-slot type	ERNT-ASQT64AD	Conversion adapter (main body), mounting bracket, mounting bracket screws (2), terminal block cover, user's manual
		ERNT-ASQT68AD	
		ERNT-ASQT62DA	
		ERNT-ASQT68DA	
		ERNT-ASQT68AD-G	Conversion adapter (main body), support flange mounting screw (1), terminal block cover, user's manual
		ERNT-ASQT63ADA	Conversion adapter (main body), mounting bracket, mounting bracket screws (2), terminal block cover, user's manual
		ERNT-ASQTD61	Conversion adapter (main body), mounting bracket, mounting bracket screws (2), support flange screw (1), terminal block cover, user's manual
		ERNT-ASQTD62	
		ERNT-ASQTD62D	
		ERNT-ASQT68TD-H01	Conversion adapter (main body), support flange screw (1), terminal block cover, user's manual
		ERNT-ASQT68TD-H02	
		ERNT-ASQT62RD	Conversion adapter (main body), mounting bracket, mounting bracket screws (2), terminal block cover, user's manual
		ERNT-ASQT64TCTT	Conversion adapter, mounting bracket, mounting bracket screws (2), terminal block cover, user's manual, cold junction temperature compensation resistor (ERNT-ASQT6□TCTT only)
		ERNT-ASQT64TCRT	
		ERNT-ASQT62TCTT	
	1-slot type + Conversion cable	ERNT-ASQT64TCTTBW	Conversion adapter, mounting bracket, mounting bracket screws (2), terminal block cover, disconnection detection connector conversion cable, disconnection detection connector conversion cable screws (2), user's manual, cold junction temperature compensation resistor (ERNT-ASQT6□TCTTBW only)
		ERNT-ASQT64TCRTBW	
		ERNT-ASQT62TCTTBW	
		ERNT-ASQT62TCRTBW	
Base adapter		ERNT-ASQB38N	Base adapter (main body), MELSEC-Q series base unit mounting screws (4), base adapter screws (4), user's manual
		ERNT-ASQB35N	
		ERNT-ASQB33N	
		ERNT-ASQB32N	
		ERNT-ASQB00JN	
		ERNT-ASQB68N	
		ERNT-ASQB65N	
		ERNT-ASQB58N	
		ERNT-ASQB55N	
		ERNT-ASQB52N	
		ERNT-ASQB38N-S1	Base adapter (main body), base adapter screws (4), user's manual
		ERNT-ASQB35N-S1	
		ERNT-ASQB33N-S1	
Conversion adapter DIN rail mounting bracket		ERNT-ASQDIN3868	Conversion adapter DIN rail mounting bracket (main body), screws (4), user's manual
		ERNT-ASQDIN356500J	
		ERNT-ASQDIN3355	
		ERNT-ASQDIN52	Conversion adapter DIN rail mounting bracket (main body), screws (3), user's manual

SYSMAC C Series ⇨ MELSEC-Q Series Upgrade Tool

		ERNT-1Y2Q904914	Conversion adapter (main body), mounting bracket, mounting bracket screws (4), user's manual

Non-Mitsubishi Programmable Controller ⇨ MELSEC-Q Series Upgrade Tool

Product name		Model	Product configuration
Universal conversion adapter	1-slot type	ERNT-AQTB20	Universal conversion adapter, mounting bracket, mounting bracket screws (2), terminal block, user's manual
		ERNT-AQTB20-S1	
		ERNT-AQTB38	
		ERNT-AQTB38-E	Universal conversion adapter, terminal block, user's manual
		ERNT-ASQTB20	Universal conversion adapter, mounting bracket, mounting bracket screws (2), terminal block, user's manual

Warranty

Please confirm the following product warranty details prior to product use.

Gratis Warranty Terms and Gratis Warranty Range

If any fault or defect (hereinafter referred to as "Failure") attributable to Mitsubishi Electric Engineering should occur within the gratis warranty period, Mitsubishi Electric Engineering shall repair the product free of charge via the distributor from whom you made your purchase.

Should the repair require a business trip, a charge will be incurred for the expense required for the dispatch of an engineer (domestic support only).

Further, onsite readjustments and testing associated with failed module replacement shall be outside the scope of responsibility of Mitsubishi Electric Engineering.

■ Gratis Warranty Period

The gratis warranty period of this product shall be one (1) year from the date of purchase or delivery to the designated place.

Note that after manufacture and shipment from Mitsubishi Electric Engineering, the maximum distribution period shall be six (6) months, and the gratis warranty period after manufacturing shall be limited to eighteen (18) months. Further, the gratis warranty period for repaired products shall not exceed the gratis warranty period of the product prior to repair.

■ Gratis Warranty Range

- (1) The gratis warranty range shall be limited to normal use based on the usage conditions, methods and environment, etc., defined by the terms and precautions, etc., given in the instruction manual, user's manual, and caution labels on the product.
- (2) In the following cases, a repair fee shall be applied even if within the gratis warranty period.
 - 1) Failure resulting from inappropriate storage or handling, carelessness or negligence by the user, or Failure caused by the user's hardware or software design.
 - 2) Failure caused by unapproved modifications, etc., to the product by the user.
 - 3) Failure that could have been avoided if, when the Mitsubishi Electric Engineering product was assembled into the user's device, safeguards defined by legal regulations applicable to the user's device or functions or structures considered standard by the industry had been provided.
 - 4) Failure recognized as preventable if the consumed products specified in instruction manuals, etc., were normally maintained or replaced.
 - 5) Failure caused by external factors beyond anyone's control such as fires or abnormal voltage, and Failure caused by Force Majeure such as earthquakes, lightning, or wind and water damage.
 - 6) Failure caused by reasons unpredictable by scientific technology standards at the time of shipment from Mitsubishi Electric Engineering.
 - 7) Any other failure not attributable to Mitsubishi Electric Engineering or found by the user to not be attributable to Mitsubishi Electric Engineering.

Warranty period after discontinuation of production (fee applied)

- (1) The period in which product repair (fee applied) is available is seven (7) years after product discontinuation. Discontinuation of production shall be reported by Mitsubishi Electric Engineering sales services.
- (2) Product supply (including spare parts) is not possible after production has been discontinued.

Overseas Services

Overseas services are out of scope.

Exclusion of opportunity loss and secondary loss from warranty liability

Regardless of the gratis warranty period, Mitsubishi Electric Engineering shall not be liable for compensation for damages arising from causes not attributable to Mitsubishi Electric Engineering, opportunity losses or lost profits incurred by the user due to Failures of Mitsubishi Electric Engineering products, damages or secondary damages arising from special circumstances, whether foreseen or unforeseen by Mitsubishi Electric Engineering, compensation for accidents, compensation for damages to products other than Mitsubishi Electric Engineering products, or compensation for replacement work, readjustment of onsite machinery and equipment, startup test runs or other duties carried out by the user.

Changes in product specifications

The specifications given in the catalogs, manuals, and technical documents are subject to change without notice.

Product application

- (1) This product shall be used in applications that will not lead to a major accident even in the unlikely event any failure or defect should occur in the product in which the product is incorporated, and shall be systematically provided with external backup and fail-safe functions that operate in the event of any failure or defect.
- (2) This product has been designed and manufactured as a general-purpose product for general industry applications, etc. Thus, the product shall be excluded from use in applications in which the public could be greatly affected such as the applications of the nuclear and other power plants operated by the respective power companies, and applications in which a special quality assurance system is required, such as the applications of railway companies or government or other public offices. The product shall also be excluded from use in aircraft, medical applications, incineration and fuel devices, manned transport devices, equipment for recreation and amusement, and safety devices, in which human life or assets could be greatly affected.

Note that if the user consults with Mitsubishi Electric Engineering in advance with regard to such an application and the user accepts that the application is to be limited and a special quality is not to be required, application shall be made possible upon exchange of required documents.

Precautions for Choosing the Products

This catalog explains the typical features and functions of the Mitsubishi Electric Programmable Controller Upgrade Tool and does not provide restrictions and other information on usage and module combinations. When using the products, always read the user's manuals and operating manuals of the products. Mitsubishi Electric Engineering will not be held liable for damage caused by factors found not to be the cause of Electric Engineering; machine damage or lost profits caused by faults in the Mitsubishi Electric Engineering products; damage, secondary damage, accident compensation caused by special factors unpredictable by Mitsubishi Electric Engineering; damages to products other than Mitsubishi Electric Engineering products; and to other duties.

For safe operations

- This product has been manufactured as a general-purpose part for general industries, and has not been designed or manufactured to be incorporated in a device or system used in purposes related to human life.
- Before using the product for special purposes such as nuclear power, electric power, aerospace, medicine or passenger movement vehicles, consult with Mitsubishi Electric Engineering.
- This product has been manufactured under strict quality control. However, when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.

MITSUBISHI ELECTRIC ENGINEERING

[NAGOYA ENGINEERING OFFICE] 139,Shimoyashikicho,Shimoyashiki,Kasugai,Aichi,486-0906,Japan

Before using this product, ensure the safety in case of failure. We shall not bear any responsibility for consequential damages caused by failure of the product.
