

DON'T BE AFRAID OF THE FIRST STEP

Thanks to SMKL digitalization and powerful software solutions

Ratingen, 7th October 2024

Mitsubishi Electric is going digital and innovative at this year's SPS trade fair in Nuremberg. Together with its partners ICONICS, Takebishi Corporation and Mesalogic GmbH, innovative solutions for digital transformation will be presented. The focus will be on the SMKL (Smart Manufacturing Kaizen Level) concept, which helps companies to drive their digitalization in small, efficient steps and thus ensure their long-term competitiveness. To be seen in Hall 6, Stand 6-348.

"There is no way around digitalization, especially when it comes to securing competitiveness in a globalized economy," emphasizes Stefan Knauf, Division Manager at Mitsubishi Electric. "With our SMKL concept, we offer companies the opportunity to design their digitalization process individually and in line with their needs."

Mitsubishi Electric's SMKL concept makes it possible to implement customized digitalization solutions for companies of all sizes. Visitors to the show can find out more about the concept on site.

In addition to SMKL, Mitsubishi Electric will be presenting its broad product portfolio, which includes integrated automation

solutions in the fields of control and drive technology as well as robotics.

This program is complemented by a range of powerful software solutions, including

- **MELSOFT Gemini 3D Simulator:** Pre-verification takes place in the digital space of a virtual factory or individual lines. This significantly reduces costs and time during the design phase.
- **MELSOFT VIXIO:** MELSOFT VIXIO is an AI-based software that performs visual inspections in conjunction with external devices such as cameras.
- **ICONICS GENESIS:** This powerful automation software from ICONICS, a group company of Mitsubishi Electric, provides real-time monitoring and control and superior alarm management to minimize downtime, improve maintenance efficiency, and enhance situational awareness.

The partner companies represented on the stand complement the range with their software solutions:

Takebishi Corporation will present DeviceXPlorer OPC Server, a simple industrial communication platform for the IoT that can be quickly and easily integrated into existing systems. SCADA and remote alarming as well as extended device connectivity and interface support are the core business of **Mesalogic GmbH**.

Visit us from 12-14 November 2024 in Nuremberg **at SPS 2024 in Hall 6, Stand 348**, and find out how Mitsubishi Electric and its partners can support you in the digital transformation of your production.
