

**Consultation**

	£
Fertility MOT Consultation	245
Your consultation will be booked with a fertility specialist and also includes a Pelvic ultrasound scan for patient (if required), Semen Analysis / pelvic ultrasound for partner (if required) and one Anti Mullerian Hormone (AMH) blood test (if required)	
Treatment consultation	150
Your consultation will be booked for 45 minutes and your consultant will review your medical history and the results of your fertility investigations. At the end of the consultation, they will recommend an individualised treatment plan or recommend additional tests. If you do need extra tests there will be additional cost and your consultant may not be able to provide a full treatment plan until the test results are known	
<b>Pre-Consultation Cancellation Policy</b>	
You may cancel your appointment any time before the 14 day cancellation period ends. Once we have provided the services you cannot change your mind, even if this is within 14 days of the date of confirmation of your appointment. If you cancel your appointment before the cancellation period ends, then we will refund any fees paid in full in relation to your consultation. If you cancel your appointment after the cancellation period ends, then we will still refund you in full provided you give us 48hrs notice prior to the date of your consultation. If you do not attend your appointment without giving notice of cancellation then we will not refund any fees paid in relation to your consultation. If you have completed pre-consultation tests, but choose not to attend your consultation, we will provide you with a copy of those test results and will refund any consultation fees in line with our cancellation policy, but you will not be eligible for a refund for cost of the test services provided. Further information is available on our website and in our terms and conditions which are provided at the time of booking	

**Recommended screening**

If you have had an AMH, TSH or vitamin D test or scan within the last six months or a diagnostic semen analysis test within the last year, you can share the results with your chosen Care clinic, and these tests won't usually need repeating

	£
If you are providing sperm for treatment	
<ul style="list-style-type: none"> <li>Diagnostic Semen Analysis</li> </ul>	100
If you are providing eggs for treatment	
<ul style="list-style-type: none"> <li>Detailed pre-treatment scan – including antral follicle count</li> </ul>	150
<ul style="list-style-type: none"> <li>Detailed 3D pre-treatment scan – including antral follicle count</li> </ul>	150
<ul style="list-style-type: none"> <li>Anti-Mullerian Hormone level blood test</li> </ul>	80
<ul style="list-style-type: none"> <li>Thyroid stimulating hormone blood test (optional)</li> </ul>	50
<ul style="list-style-type: none"> <li>Vitamin D level blood test (optional)</li> </ul>	78

**Treatment costs**

The tables below set out the likely typical cost of treatments provided by Care

	£
<b>Intrauterine insemination with partner or donated sperm:</b>	
IUI treatment	
The cost covers nurse planning, monitoring scans; sperm preparation; insemination; pregnancy scan or post-treatment review appointment and counselling support. The cost of donor sperm is not included. See below for information on the costs of buying sperm from the Care sperm bank or transferring sperm purchased from a partner sperm bank.	
Estimated drug costs in a medicated or stimulated cycle	895
The typical cost of medication is £500. The type of cycle we recommend for you will depend on your medical history and the results of tests carried out as part of your pre-treatment planning.	
HFEA fee	
only applicable if using donated sperm	40

IVF	£
<p>IVF with fresh embryo transfer</p> <p>The cost covers nurse planning with one of our fertility specialists; monitoring scans, in-treatment blood tests, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation, culture and fresh embryo transfer; embryo freezing and first year of storage; pregnancy scan or post-treatment review appointment and counselling support.</p>	3,500
<p>IVF with elective freeze of all embryos</p> <p>The cost covers nurse planning with one of our fertility specialists; monitoring scans, in-treatment blood tests, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and culture, freezing of all embryos, one year's storage of embryos and counselling support. The cost of frozen embryo transfer is not included.</p>	4,000
<p>Estimated drug costs</p> <p>Our medication is tailored to each patient based on their medical history and blood test results. The typical cost of medication is £1,600 but depends on your medical history. Please be reassured that we will tell you the exact cost of the drugs we recommend before you decide to start treatment.</p> <p>When treatment with a fresh embryo transfer leads to pregnancy, we prescribe a medication known as "luteal support" up to the 7<sup>th</sup> week of pregnancy. The typical additional cost of luteal support medication is £112.</p>	
<p>Intracytoplasmic sperm injection (ICSI)</p> <p>ICSI is required if the results of the diagnostic semen analysis or previous treatment history indicate it is needed</p>	1,000
<p>IVF using own frozen eggs</p> <p>The cost includes nurse consultation, monitoring scans, thawing of eggs, sperm preparation, ICSI, embryo culture, embryo transfer, pregnancy scan or post-treatment review appointment and counselling support.</p>	2,500
<p>Estimated drug costs</p> <p>Patients having a transfer of embryos created with donated eggs are typically prescribed drugs costing £400 to prepare their uterus for embryo transfer. When treatment is successful, we prescribe additional medication up to the 10<sup>th</sup> week of pregnancy. The cost of this further luteal support medication is £225.</p> <p>Our research has shown that 33% of our patients do not absorb enough progesterone medication from pessaries. In these patients, we recommend injectable progesterone as "rescue luteal support" up to the pregnancy test and then up to 10 weeks of pregnancy. The cost of this medication is up to £795.</p>	
HFEA fee with embryo transfer	100
<p><b>IVF LITE</b> - this treatment plan offers the essential core elements of fertility treatment at an accessible price (subject to eligibility criteria)</p>	2,995
<p>The Lite package (Mini IVF) includes all ultrasound assessments during treatment, 10 days of stimulation medication and luteal support until pregnancy test, Blastocyst culture, Embryo transfer, Embryo freezing and one year's storage and local sedation. This cost includes pregnancy scan or post-treatment review appointment and a counselling support session.</p>	
HFEA fee with embryo transfer	100

Treatment with donated eggs	£
<p><b>IVF with donated eggs</b></p> <p>The cost includes a consultation with a donation expert, nurse planning, scans, in-treatment blood tests, sperm preparation, your chosen donated eggs, embryo creation (including ICSI where frozen eggs are used), culture and fresh embryo transfer; pregnancy scan or post-treatment review appointment and counselling support.</p> <p>We charge a £1,090 fee to secure the allocation of your chosen eggs and their transfer to your treating Care clinic. We only guarantee the availability your selected eggs for 3 months and if they are not used in treatment within that time, they may not be available. The fee is non-refundable but can be used against any future treatment.</p>	
<ul style="list-style-type: none"> <li>with fresh donated eggs</li> </ul> <p>If there are fewer than nine eggs in a fresh donation cycle, then a refund of £3,000 will be given</p>	12,450
<ul style="list-style-type: none"> <li>a set of 6 frozen donated eggs from the Care egg bank</li> </ul> <p>We require a part payment of £1,090 of your treatment fee to secure the allocation of your chosen eggs and their transfer to your treating Care clinic. We only guarantee the availability your selected eggs for 3 months and if they are not used in treatment within that time, they may not be available. The part payment is non-refundable but can be used against any future treatment.</p>	8,185
<ul style="list-style-type: none"> <li>a set of 9 frozen donated eggs from the Care egg bank</li> </ul> <p>We require a part payment of £1,090 of your treatment fee to secure the allocation of your chosen eggs and their transfer to your treating Care clinic. We only guarantee the availability your selected eggs for 3 months and if they are not used in treatment within that time, they may not be available. The part payment is non-refundable but can be used against any future treatment.</p>	10,990
<ul style="list-style-type: none"> <li>eggs from a known donor</li> </ul> <p>This fee includes the donor expenses of £750 but excludes the cost of the donor's initial consultation, pre-consultation screening tests, drugs and infectious screening.</p> <p>Estimated drug costs for the known donor's ovarian stimulation: Our medication is tailored to each donor based on their medical history and blood test results. The cost of medication is around £400 and will depend on your medical history. Please be reassured that we will tell you the exact cost of the drugs we recommend before you decide to start treatment.</p>	7,588
<p><b>Infectious and genetic screening for your known donor</b></p> <p>The law requires all clinics to perform infectious and genetic screening for an egg donor. Screening is required initially and in every cycle of stimulation.</p>	1,158
<p><b>Registration fee</b></p> <p>We charge a one-off, non-refundable fee to cover the time we invest in working with you to identify a suitable donor</p>	545
<p><b>Drugs costs</b></p> <p>Patients having a transfer of embryos created with donated eggs are typically prescribed drugs costing between £150 and £410 to prepare their uterus for embryo transfer. When treatment is successful, we prescribe additional medication up to the 10<sup>th</sup> week of pregnancy. The cost of this further luteal support medication is £225.</p> <p>Our research has shown that 33% of our patients do not absorb enough progesterone medication from pessaries. In these patients, we recommend injectable progesterone as "rescue luteal support" up to the pregnancy test and then up to 10 weeks of pregnancy. The cost of this medication is up to £795.</p>	
HFEA fee	100

<b>Shared Motherhood/Parenthood</b>	
<p><b>Shared Motherhood/Parenthood fresh synchronised cycle</b></p> <p>The treatment cost includes a consultation with a donation expert, implications counselling, specialist guidance on parenthood consent, synchronisation by nurse planning, monitoring scans for the partner providing eggs and the partner having the first embryo transfer; in-treatment blood tests, donor sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation, culture and transfer, pregnancy scan, post-treatment review appointment and counselling support.</p>	4,000
<p><b>Shared Motherhood/Parenthood - Elective Freeze All</b></p> <p>The treatment cost includes a consultation with a donation expert, implications counselling, specialist guidance on parenthood consent, nurse planning, monitoring scans for the partner providing eggs; in-treatment blood tests, donor sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation, culture and freezing of all embryos, one year's storage of embryos, cost of first transfer within the first 12 months of freezing and counselling support.</p>	4,000
<p><b>Shared Motherhood/Parenthood Using Own Frozen Eggs</b></p> <p>The treatment cost includes a consultation with a donation expert, specialist guidance on parenthood consent, nurse planning, monitoring scans for the partner having embryo transfer, thawing of eggs, donor sperm preparation, ICSI, embryo culture, fresh embryo transfer, pregnancy scan or post-treatment review appointment and counselling support. The cost of any further frozen embryo transfer and storage is NOT included.</p>	4,000
<p><b>Infectious screening for the egg provider</b></p> <p>The law requires all clinics to perform infectious screening for the egg provider in a shared motherhood treatment. This screening is needed in every cycle of stimulation. If you compare costs between clinics, we encourage you to factor this screening into your comparison.</p>	223
<p><b>Drugs costs</b></p> <p>It is challenging to estimate likely medication costs, but they can range average £1,100 for the egg provider. Please be reassured that we will tell you the exact cost of the medicines we recommend before you decide to start treatment.</p> <p>Patients having a transfer of embryos created using their partner's eggs are typically prescribed drugs costing around £400 to prepare their uterus for embryo transfer. When treatment is successful, we prescribe additional medication up to the 10<sup>th</sup> week of pregnancy. The cost of this further luteal support medication is £225.</p> <p>Our research has shown that 33% of our patients do not absorb enough progesterone medication from pessaries. In these patients, we recommend injectable progesterone as "rescue luteal support" up to the pregnancy test and then up to 10 weeks of pregnancy. The cost of this medication is up to £795.</p>	
<b>HFEA fee</b>	100
<p><b>Frozen embryo transfer (FET) - intended Shared Motherhood/Parenthood Cycle</b></p> <p>The cost includes nurse planning, monitoring scans, in-treatment blood tests, embryo thawing, culture and transfer, pregnancy scan or post-treatment review appointment and counselling support.</p>	1,995
<p><b>Frozen embryo transfer (FET) - elected Shared Motherhood/Parenthood</b></p> <p>For a person who has stored embryos that wants to now give to their partner, this cost includes a consultation with a donation expert, implications counselling, specialist guidance on parenthood consents, nurse planning, monitoring scans, in-treatment blood tests, embryo thawing, culture and transfer, pregnancy scan or post-treatment review appointment and counselling support</p>	2,255

<b>Surrogacy</b> (please see separate surrogacy fee schedule)	
---	--

<b>IVF related supplementary procedures</b>	<b>£</b>
Although not required, we recommend that all patients having IVF consider including the following options in their treatment plan	
<b>CAREmaps</b> You can find information about our exclusive embryo selection algorithm on our website and in written information available from your chosen Care Clinic	995
<b>Freezing of embryos remaining after fresh embryo transfer</b> We recommend that patients plan for the potential cost of freezing surplus embryos. Having frozen embryos allows further frozen embryo transfer treatment without repeating all medical interventions or incurring the costs of a complete treatment cycle. This option gives our patients the best chance to have or complete a family. Freezing does not include the cost of storage which must be paid. (If not included in original treatment package)	345
<b>Storage of frozen embryos (annual charge)</b>	350

<b>Frozen Embryo Transfer</b>	<b>£</b>
<b>Frozen embryo transfer (FET)</b> The cost includes nurse planning, monitoring scans, in-treatment blood tests, embryo thawing, culture and transfer, pregnancy scan or post-treatment review appointment and counselling support.	1,995

<b>HFEA fee</b>	100
-----------------	-----

<b>Frozen Embryo Transfer with donated embryos</b>	<b>£</b>
<b>Registration fee</b> We charge a one-off, non-refundable fee to cover the time we invest in working with you to match you with your embryo donor	545
<b>Treatment with 1 frozen donated embryo</b> The cost covers the infectious screening of the egg and sperm providers and their preparation and support for donation, allocation of the embryos and transfer to your chosen clinic, nurse planning with one of our fertility specialists, monitoring scans, in-treatment blood tests, first embryo transfer, pregnancy scan or post-treatment review appointment and counselling support.  If your frozen embryo fails to survive the thawing process you will be eligible for a partial refund, please see our terms and conditions. The cost of storage and medication is not included.	4,160
<b>Treatment with a set of 2 frozen donated embryos</b> The cost covers the infectious screening of the egg and sperm providers and their preparation and support for donation, allocation of the embryos and transfer to your chosen clinic, nurse planning with one of our fertility specialists, monitoring scans, in-treatment blood tests, first embryo transfer, pregnancy scan or post-treatment review appointment and counselling support.  If both your frozen embryos fail to survive the thawing process you will be eligible for a partial refund, please see our terms and conditions. The cost of storage and medication is not included.	5,200
<b>Treatment with a set of 3 frozen donated embryos</b> The cost covers the infectious screening of the egg and sperm providers and their preparation and support for donation, allocation of the embryos and transfer to your chosen clinic, nurse planning with one of our fertility specialists, monitoring scans, in-treatment blood tests, first embryo transfer, pregnancy scan or post-treatment review appointment and counselling support.  If all your frozen embryos fail to survive the thawing process you will be eligible for a partial refund, please see our terms and conditions. The cost of storage is not included.	6,240

<p>Treatment with embryos donated by egg and sperm providers known to the recipient</p> <p>The cost covers the infectious screening of the egg and sperm providers and their preparation and support for donation, allocation of the embryos and transfer to your chosen Clinic, nurse planning with one of our fertility specialists, monitoring scans, in-treatment blood tests, first embryo transfer, pregnancy scan or post-treatment review appointment and counselling support.</p> <p>If all your frozen embryos fail to survive the thawing process you will be eligible for a partial refund, please see our terms and conditions. The cost of storage is not included. The cost of storage is not included.</p>	4,160
Storage of frozen embryos (annual charge)	350
Storage of frozen embryos (when paid by monthly direct debit)	29.17

<p>If you are accessing treatment using frozen donated embryos, the registration fee paid for services to match you with an embryo donor is non-refundable. If your frozen donated embryo does not survive the thawing process or you are withdrawn from the treatment by your clinician for clinical reasons or if you withdraw from treatment after starting your treatment, you will be refunded your package fee less £2,000 which is the cost of infectious and genetic screening of the egg and sperm provider; counselling support and preparation of the egg and sperm provider for donation; transfer of your embryos to your chosen Care clinic, and; your support and preparation for treatment.</p>	2,080
---	-------

FER with subsequent use of donated embryos	1,995
--	-------

HFEA fee	100
<p>Drug costs</p> <p>Patients having transferred frozen embryos are typically prescribed drugs costing between £150 and £410 to prepare their uterus for embryo transfer. When treatment is successful, we prescribe medication up to the 10<sup>th</sup> week of pregnancy. The cost of this medication is £225.</p> <p>Our research shows that 33% of our patients do not absorb enough progesterone medication from pessaries. In these patients, we recommend injectable progesterone as "rescue luteal support" up to the pregnancy test and then up to 10 weeks of pregnancy. The cost of this medication is up to £795.</p>	

<b>Infectious screening</b>	
<p>UK law requires patients providing eggs or sperm for treatment to be screened for HIV and hepatitis three months before their first treatment cycle and once every two years. All UK clinics have to do this and please factor in the cost of these tests when comparing prices. If you are coming to Care for the first time and have the results of previous tests, you may not need to repeat the screening tests.</p>	

	£
Infectious screening for the sperm provider	100
Infectious screening for the egg provider and person having transfer (if different)	
<ul style="list-style-type: none"> <li>Standard infectious screening</li> <li>Rubella and chlamydia screening</li> </ul>	100 100

<b>Donor sperm</b>	
--------------------	--

	£
Donor sperm	
Includes donor matching, reservation and transfer of donor sperm to your chosen Care clinic and donor sperm for one treatment cycle	1,280
Import of donor sperm purchased from a partner sperm bank (includes one year's storage)	385

<p>Known Sperm Donation</p> <p>This includes genetic/clinical history assessment of the known sperm donor, semen analysis, donation consultation, infectious and genetic screening, counselling, consents, sperm processing and freezing, quarantine and post quarantine infectious screening, payment of donor expenses and one year storage. The cost of treatment using the frozen donor sperm is not included</p> <p>Refunds: If for any reason your donor does not complete the donation process, you will be refunded part of the known donor fee dependant on the stage at which the donor discontinues. A refund of £4150 will be issued if the donor participates in any of the initial donation steps (counselling, assessment) but not infectious screening. This could be due to there being no sperm at semen analysis, or the donor changing their mind, for example. A refund of £950 will be issued if the donation process cannot be completed beyond the initial screening to the point of the final post quarantine screening. Once the donor completes the post quarantine screening, after sperm freezing, no refunds are payable.</p>	4,835
---	-------

### Preimplantation Genetic Testing (PGT-A)

This optional embryo selection treatment is recommended to patients where the eggs for treatment are provided by someone aged over 36 or to patient couples who have experienced recurrent miscarriage. PGT-A can only be provided in an elective freeze all IVF treatment cycle.

PGT-A (within a treatment cycle)	£
PGT-A fee	2,500
The fee includes treatment set up, biopsy set up and CAREmaps. Extended culture and ICSI (if required) are not included in the fee	
PGT-A fee per embryo biopsied	350

PGT-A (testing of previously frozen embryos)	
Embryo thaw, biopsy, and refreeze	2,500
fee includes embryo thaw, treatment set up, biopsy set up.	
PGT-A fee per embryo biopsied	350

### Freezing and storage of eggs or sperm for fertility preservation

All **patients** freezing eggs or sperm must have standard infectious screening tests unless they can **provide** the results of tests from **three** months before freezing. **UK** law requires infectious screening at the time of freezing if future surrogacy treatment is planned or likely – your clinic can share these costs once future treatment plans are known

	£
<b>EggSafe – a collection of up to 20 eggs gathered over up to 4 cycles</b> The cost includes nurse planning, monitoring scans, in-treatment blood tests, egg collection with conscious sedation or local anaesthetic, egg freezing, counselling support and storage of eggs for two years. The costs of consultation and pre-treatment screening tests are not included.	7,760
Drug costs are not included. It is not easy to provide a precise estimate of likely medication costs. However, they can range from as little as £1,061 up to £1,746. 79% of patients freezing eggs have a drug cost between £1,061 to £1,404. Please be reassured that we will tell you the exact cost of the medicines we recommend before you decide to start treatment.	
<b>Collection and freezing of eggs</b> The cost includes nurse planning, monitoring scans, in-treatment blood tests, egg collection with conscious sedation or local anaesthetic, egg freezing and counselling support. The costs of consultation, pre-treatment screening tests and ongoing storage are not included.	2,750
Drug costs are not included. It is not easy to provide a precise estimate of likely medication costs. However, they can range from as little as £1,061 up to £1,746. 79% of patients freezing eggs have a drug cost between £1,061 to £1,404. Please be reassured that we will tell you the exact cost of the medicines we recommend before you decide to start treatment.	
<b>Sperm freeze per sample</b> The cost includes consent planning, sperm freezing, 1 years storage and counselling support. The cost of consultation, pre-treatment screening tests and ongoing storage (after first year) are not included.	350
<b>Storage of frozen sperm/eggs (annual charge)</b>	350
<b>Storage of frozen sperm/eggs (monthly direct debit)</b>	29.17

**Specialist treatment options**

Care offers several treatments at patient request only or to a small number of patients based on their individual medical history or previous fertility cycle outcome or pre-consultation screening tests

	£
Artificial oocyte activation (AOA)	150
CareUnity testing 1 gamete provider only	190
CareUnity testing both gamete providers	240
EmbryoGen	520
EmbryoGlue	0
Endometrial scratch	200
ERA	1,300
EMMA, ALICE	1,495
HSG	450
Sperm chromosome screening (aneuploidy)	695
Sperm aneuploidy and DNA Fragmentation Index (DFI)	950
SpermMobil	155
Sperm Oxidative Stress (SOS) test	110
Triome testing (combined ERA, EMMA and ALICE screening)	1,770
ZyMot sperm selection	230

**Diagnostic Tests and assessments that can be added to treatment or provided to patients, not in treatment**

	£
Conscious sedation for embryo transfer The sedation cost at egg collection is included within the relevant treatment fee, a patient rarely requires sedation for the embryo transfer, and so this is not included in the treatment fee	0
Counselling (per session) Up to three optional counselling sessions are included in treatment costs. Counselling is only payable if accessing more than three sessions	75
Cycle Monitoring Includes all scans required for timed intercourse treatment	350
Cycle Monitoring - IVF Life Includes all 'in treatment cycle' monitoring scans, blood tests and pregnancy scan required for treatment in IVF Life	700
Fertility Assessment - combined (assessment of the uterus, ovaries, ovarian reserve and sperm quality) Includes scan, AMH blood test, semen analysis and one joint consultation to discuss results. If results show treatment may be needed, a full consultation will be required, but pre-consultation tests will not be needed.	245
Review consultation	100
Surgical sperm recovery The cost includes consent planning, sperm freezing, one year's storage, histology and review appointment as appropriate and counselling support.	1,200
Ultrasound scan (not carried out a part of fertility treatment)	150

### Treatment Cancellation Policy

Occasionally treatment cycles are cancelled. The information below sets out the most common scenarios and the amount payable in each case:

#### Frozen embryo replacement, IUI

Cancelled at the monitoring stage	200
-----------------------------------	-----

#### IVF, Egg Freezing and Egg Safe

Cancelled at the monitoring stage	400
-----------------------------------	-----

#### IVF with donated eggs

Cancelled at the monitoring stage	915
-----------------------------------	-----

If treatment is cancelled post-monitoring but before embryo replacement, then a refund will be paid to the patient as follows:

Failed egg recovery (plus HFEA fee refund)	520
--	-----

Failed fertilisation/cleavage	365
-------------------------------	-----

Failed frozen embryo thaw (plus HFEA fee refund)	670
--	-----

#### PGT-A

The PGT-A fee is refundable in full if a failed egg recovery/fertilisation/cleavage occurs.	2,500
---	-------

A partial refund is available if embryos are cultured, but none are biopsied.	1,505
---	-------

### Treatment Discount Policy for Sperm Sharing

If undergoing fertility treatment after donating sperm as a sperm sharer, **one** of the following treatment discounts is available

IVF Treatment	3000
---------------	------

IUI in surrogacy	3000
------------------	------

Frozen Embryo Transfer	standard fee
------------------------	--------------

Frozen Embryo Transfer to host (surrogacy)	3000
--	------

## Transfer-in/out fees

### Transfer-in fees

Transfer-in of patient sperm/eggs/embryos from a Care clinic Patients are responsible for payment of fees charged by couriers for the movement of sperm/eggs/embryos	nil
Transfer-in of patient sperm/eggs/embryos from a UK-based non-CARE clinic (provided treatment commences within one year of transfer)	nil
Transfer-in of patient sperm/eggs/embryos from an overseas clinic Patients are responsible for payment of fees charged by couriers for the movement of sperm/eggs/embryos	288
Personal import of donor sperm for named patient (includes up to one year's storage free of charge) Patients are responsible for payment of fees charged by couriers for the movement of sperm	385

### Transfer-out fees

Transfer of sperm/eggs/embryos from one Care clinic to another Care clinic Patients are responsible for payment of fees charged by couriers for the movement of sperm/eggs/embryos	Nil
Transfer of sperm/eggs/embryos stored at Care to a UK-based non-Care clinic Patients are responsible for payment of fees charged by couriers for the movement of sperm/eggs/embryos	240
Transfer of sperm/eggs/embryos stored at Care to an overseas clinic Patients are responsible for payment of fees charged by couriers for the movement of sperm/eggs/embryos	1,080

## Payment Options

Treatment fees are paid before the treatment starts. Bank transfer, debit and credit cards are accepted methods of payment. Our preferred method is by debit card.

In cases where your health insurance may fund consultations and investigations, you must pay the fees directly to CARE and then claim the cost back from your insurer. We are unable to negotiate claims directly with health insurers.

CARE reserves the right to amend prices. If you have a consultation with Care and agree to a recommended course of treatment, we will provide you with a fully costed treatment plan and an invoice that sets out the cost of the medications we recommend. Once the treatment and medication invoices are paid, we will provide treatment for the agreed price, which will not change unless we give you six months' notice. If we implement price changes before you have paid your invoices for treatment then we will provide you with an updated costed treatment plan and invoices so that we can expressly agree the cost of treatment with you before you enter into a contract with Care by paying for your treatment and medication.

**Effective from 7 May 2024.**
