

Drinking Water Datasheet

Veitur Utilities - Reykjavík Capital Region

Source of supply

In the capital region, Veitur distributes cold water from its groundwater reservoirs. Due to the high quality of the groundwater, no treatment is required (chemical, mechanical, biological) as water comes out of the ground via secured bore holes. Veitur operates under an integrated quality system that aims to ensure customers safe delivery and efficient service. Quality is monitored throughout the distribution system.

Parameters and parametric values

According to drinking water regulation nr. 536/2001

Microbe analysis

Microbial properties	Unit	Max. recommended value
Total number of microbial analyses	Number	
Total microbes 22°C	Average	100/ml
	Highest value	100/ml
	Lowest value	100/ml
Escherichia coli (E. Coli)	Average	0/100 ml
	Highest value	0/100 ml
	Lowest value	0/100 ml
Enterococci	Average	0/100 ml
	Highest value	0/100 ml
	Lowest value	0/100 ml

Quality Standards

European requirements 98/83 (Council directive 98/83/EC, the Drinking Water Directive, DWD) for drinking water have been implemented in Icelandic legislation for drinking water in regulation nr. 536/2001.

Reports

Results of monitoring are published and available on www.veitur.is.

Surveillance

Reykjavik Office for Health and Environment (HER) is responsible for surveillance on production and distribution of drinking water in Reykjavík. Microbiological, chemical and indicator parameters are monitored and tested regularly.

Sampling is according to drinking water regulation nr. 536/2001.
