

TO MANAGE CYBER RISK YOU MUST UNDERSTAND IT

An ITC cyber security review will provide you with a clear, comprehensive and independent understanding of the levels of risk you are carrying. We assess every aspect of your organisation – its technology, culture, governance and people – and take account of any relevant regulatory standards, to deliver straightforward and actionable findings.

Highlighting vulnerabilities

Our advisors begin each review onsite, comprehensively testing technical architecture and engaging with staff at all levels.

Detailed information is gathered via face-to-face conversations, workshops and through detailed reviews of all relevant documentation. Post-visit, all findings are compiled into a single report suitable for both senior management and technical teams.

This will highlight the vulnerabilities you carry in each area of your organisation, provide practical recommendations and suggest cost-effective solutions.

Enabling informed decisions

Our report will include a management-level executive summary of the identified issues and their potential business impact, and will be supplemented by a detailed technical appraisal.

This will help guide you in making any necessary improvements – including changes to governance structures and staff training – and will advise on the level of investment required.

About ITC

Established in 1995, ITC Secure provides cyber threat advisory and managed security services to help organisations assess, manage and mitigate their risk. With cyber security professionals including former members of British intelligence and access to some of the World's leading security experts, we provide discreet risk advice to a number of high-profile global brands.

Using a proven methodology to show organisations their current cyber maturity, we deliver clear, outcome-based recommendations that assist organisations in making the right cyber investment choices.
