

Customer: Tier 1 Customer
Application: Far Side Airbag
Part: StepLess® Ear Clamps 193

STRONGER, MORE RELIABLE CONNECTIONS

CHALLENGE

Replace an inferior competitor low profile clamp on a far side airbag application for the Occupant Safety market, which was causing kinking and coming unhooked, with the more secure StepLess® Ear Clamps 193. Due to time constraints, the customer wanted to use the StepLess® Ear Clamps 167, which they had used in the past, to prevent a new clamp evaluation.

SOLUTION

The StepLess® Ear Clamps 193 13E was ultimately chosen for its wide diameter reduction range and superior strength, allowing for easier assembly and a reliably secure connection.

RESULTS

Oetiker's global teams were able to quickly provide the necessary drawings and samples needed to move the project to completion. Sales' expertise in supporting the customer with the right clamp selection resulted in a stronger, more secure connection for their far side airbag connection, along with faster and easier installation during assembly.

Development partner dedicated to delivering extraordinary performance and outstanding durability

Global infrastructure to customize your connecting solution
