TIERED MARGINS

What is tiered margining?

Tiered margining is used to set margin rates at levels which reflect the size of your position in a particular market. Under a tiered structure, different portions of your overall notional exposure are margined at different rates – the initial portion attracts the lowest rate, with progressively higher rates applied to each subsequent tier as the position grows. Tiered margining allows us to offer competitive margins while maintaining responsible risk management.

While most positions will incur the lowest margin rates, which reflect the underlying market liquidity of smaller trades, larger trades and assets with lower liquidity may require further margin.

What you need to know

We have different tier structures in place that will increase in line with your overall position size. The portion of the position that falls into the higher tier will incur the higher margin rates.

We may change the below rates without notice to you, meaning that the margin rates below can change from time to time and will be updated on this document. Make sure that you're checking this document regularly to get the most updated information. position will be converted in USD (for margin calculations purposes only) and reflect the information below.

Tiers as per the below tables are all in notional value in USD. If the underlying currency of the instrument traded is not in USD, the notional value of the position will be converted in USD (for margin calculations purposes only) and reflect the information below.

How it works

Take a 100 lot XAUUSD position at a current price of USD 4,346:

Contract size	1 lot = 100oz
Position size	100 lots = 10,000 oz
USD notional volume	$10,000 \times 4,346 = \text{USD } 43,460,000$

Your notional value of USD 43,460,000 spans 4 tiers, so each portion of the position is margined at its own rate. Only the exposure that falls into a higher tier attracts the higher rate.

Tier	Notional	Margin Rate	Margin Required
Tier 1	USD 1,000,000	1:1000 (0.10%)	USD 1,000
Tier 2	USD 14,000,000	1:500 (0.20%)	USD 28,000
Tier 3	USD 15,000,000	1:200 (0.50%)	USD 75,000
Tier 4	USD 13,460,000	1:33 (3.00%)	USD 403,800
Total	USD 43,460,000	-	USD 507,800
