\$UST10Y - 10-Year US Treasury Yield Weekly, Daily and Monthly Charts

Primary Consideration:

- **Neutral Near-Term: the 10-Year Treasury Yield acting a little bullish with a lower yield potential, given market structure financial institutions and borrowers winners at these levels, next 2 weeks likely critical to directional movement**
- Washington Leadership expected to be friendly to business, which favors investing in equities, the dollar and commodities over bonds – entry an exit always the trick
- The Bond market topped (low yield) back in July anticipating domestic and global fiscal policy (infrastructure, etc.) stimulus activities would be elevated to a level to compliment ongoing monetary policy.

Weekly, Daily and Monthly Charts

Primary consideration:

- Evolving global macro forces supportive and providing green-shoot inflationary support, presently oil price key factor in defining index direction
- The CRB Commodity Index appears to be building a base to move higher, which near term would be a primary function of oil price strength leadership, reasonably stable dollar, and belief and confidence in the near term future.

Weekly, Daily and Monthly Charts

Primary Consideration:

- Neutral - I remain more concerned about additional price weakness and the culmination of a bottoming process near term. Presently, downside price considerations to 9.23. This market is coiling for a major price move

Alternative Consideration:

- Considering global risks and uncertainties and building aggressive fiscal and monetary policy intervention activities argue a price bottom is in place or near

Additional Thought:

- Market participants appear to be building a risk appetite. Being short means at least having close mental stops

Primary consideration:
