University of Arkansas System

Near Term Market Considerations Week Beginning May 29, 2017

This Week's Select Summary Considerations:

- 10-Year US Treasury Yield:
 - We enter the week slightly bullish with a potentially lower yield
 - Economic Weakness, Event Risk Concerns, or Other Market Concerns/Factors will likely take yields lower to 2 or below before moving higher
 - As global events unfold (economic, social, political, etc.) chart activity will provide guidance
- US Dollar Index:
 - Remains Bearish: For a period the dollar should have more weakness than strength against the Euro
 - Big Picture: The dollar has a bullish bias given global economic, social, political and military challenges
 - Unless Middle East, North Korean, European, other anomaly events start to dominate market participant decisions for a period, then we are still DEFINING a trading range 95 -104
- CRB Index:
 - Remain cautious, dangerously weak, likely forming a base, additional leg down should be considered possible
 - Bigger Picture: Though spastic global macro forces in general remain supportive of the commodity sector
 - For the CRB Commodity Index to breakout will likely be a function of oil price leadership and/or broad commodity support, a reasonably stable to weaker dollar and belief and confidence in global fiscal, monetary, trade and regulatory policy leadership

Near Term Market Considerations Week Beginning May 29, 2017

Near Term Summary Considerations:

- \$WTIC Light Crude Oil:
 - Near-term prices remain in 45 to 55 dollar trading range. Will oil prices retest the top of the range at 55-dollars this week?
 - Additional price weakness from current levels will likely be problematic for the \$CRB Index and commodity sector
 - As always, remain focused on the bigger “Geopolitical Picture and Building Military Friction”
 - Sustained oil prices below \$50 presents macro challenges and raises global economic momentum concerns
- Soybeans:
 - In search of a bottom at \$9.06 or possibly \$8.35
 - A resumption of commodity index weakness, a likely function of fundamentals and Fiscal and Monetary Policy and Global Economic Uncertainties, could translate into a final price low at \$8.35 or lower
 - Simply stated watch the price action to define soybean price dynamics
- Corn:
 - Basing period underway followed by upward price momentum
 - Cautionary Note: A resumption of oil price weakness could possibly be problematic for corn prices
- Long Grain Rice:
 - Slight bullish bias remains due to U.S. long grain 2017 acreage and production uncertainty, but slowly losing momentum
 - This is a highly complex market with an array of factors impacting price from 2016/2017 fundamentals; 2017 acreage, production and quality uncertainties; present underlying aggregate commodity sector dynamics; problematic global economic momentum, geopolitical uncertainties, and/or global agronomic outlook

Near Term Market Considerations Week Beginning May 29, 2017

Near Term Summary Considerations:

- Cotton:
 - With the 84-cent price objective achieved now we wait on price action to determine if additional price strength exists
- Wheat:
 - Bullish price potential to \$4.71 to \$5.51 remains a possibility
- SPY SPDR S&P 500 ETF:
 - Caution – Consolidation period likely
 - Allow price action to unfold
 - Larger trend remains up
- QQQ NASDAQ Power Shares:
 - Momentum driven by a select few technology stocks
 - Allow price action to unfold
 - Larger trend remains up

\$UST10Y – 10 Year US Treasury Yield Weekly, Daily and Monthly Charts

This Week

Primary Consideration:

- We enter the week slightly bullish with a potentially lower yield
- Economic Weakness, Event Risk Concerns, or Other Market Concerns/Factors will likely take yields lower to 2 or below before moving higher
- As global events unfold (economic, social, political, etc.) chart activity will provide guidance
- Potential trading range trading range over the next one-plus years with Global Government and Central Bank intervention and unfolding global events defining potential upside of 3 to 3.25-possibly higher and bottom in the coming months of a yield of 2 or lower
- Present market structure suggests financial institutions and borrowers remain winners at these levels
- Some suggest the 35 year bull bond market will be over with a yield that holds above 2.6, others at 3.0; Actually, global fiscal, monetary, trade, and regulatory policy market intervention likely make picking these points very premature
- This is a market that likely moves sideways for a few years and even revisits the previous low or lower

US Dollar Index

Weekly, Daily and Monthly Charts

This Week

Primary Considerations:

- Remains Bearish: For a period the dollar should have more weakness than strength against the Euro
- Big Picture: The dollar has a bullish bias given global economic, social, political and military challenges
- Unless Middle East, North Korean, European, other anomaly events start to dominate market participant decisions for a period, then we are still DEFINING a trading range 95 -104
- Longer Term there is no question the dollar is bullish

CRB Commodity Index

Weekly, Daily and Monthly Charts

This Week

Primary consideration:

- **Remain cautious, dangerous weak, likely forming a base, additional leg down should be considered possible**
- **Bigger Picture: Though spastic global macro forces in general remain supportive of the commodity sector**
- For the CRB Commodity Index to breakout will likely be a function of oil price leadership and/or broad commodity support, a reasonably stable to weaker dollar and belief and confidence in global fiscal, monetary, trade and regulatory policy leadership
- Between Fed off-again and on-again accommodation and/or verbal guidance, building uncertainties surrounding fiscal, trade and regulatory policy simulative activities, the \$CRB Commodity Index (key economic indicator) has struggled

\$WTIC Light Crude Oil Weekly, Daily and Monthly Charts

This Week

Primary Consideration:

- Near-term prices remain in 45 to 55 dollar trading range. Will oil prices retest the top of the range at 55-dollars this week?
- Additional price weakness from current levels will likely be problematic for the \$CRB Index and commodity sector
- As always, remain focused on the bigger “Geopolitical Picture and Building Military Friction”
- Sustained oil prices below \$50 presents macro challenges and raises global economic momentum concerns
- Light Crude Oil prices likely supported by Syrian, Middle East, and North Korean uncertainties and building Russian and U.S. military friction, Chinese positioning, Venezuela crisis, OPEC verbal guidance and global reflation
- Bigger Picture: Global economic, social, political and military uncertainties remain supportive of prices
- **2017 – Likely primary range \$40 to \$60 with possible high in \$72 area**
- Washington Leadership likely bullish U.S. production
- Saudi Arabia, OPEC and other oil producers have major role in limiting downside 2017 price floor

Soybeans

Weekly, Daily and Monthly Charts

This Week

Primary Consideration:

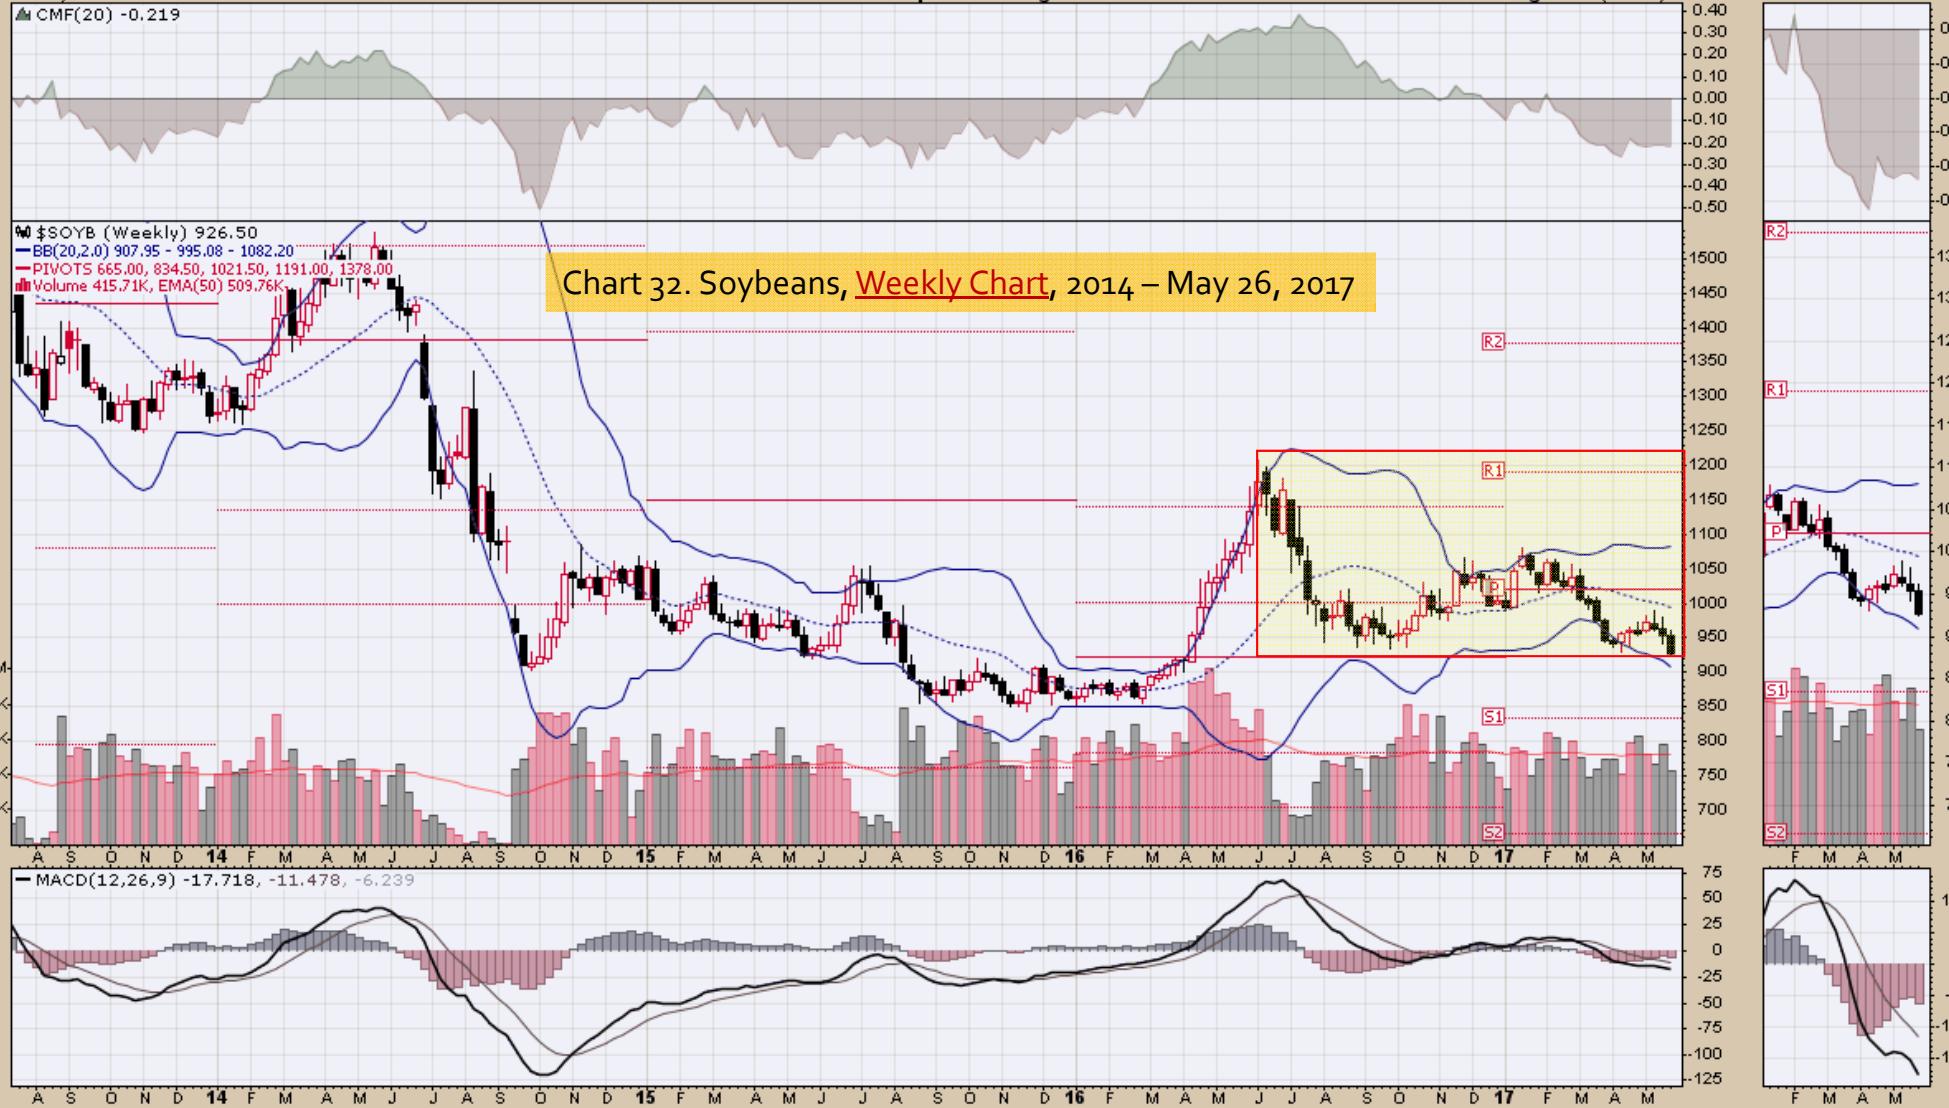

- In search of a bottom at \$9.06 or possibly \$8.35
- A resumption of commodity index weakness, a likely function of fundamentals and Fiscal and Monetary Policy and Global Economic Uncertainties, could translate into a final price low at \$8.35 or lower
- Simply stated watch the price action to define soybean price dynamics

Rice

Quarterly and Daily Charts

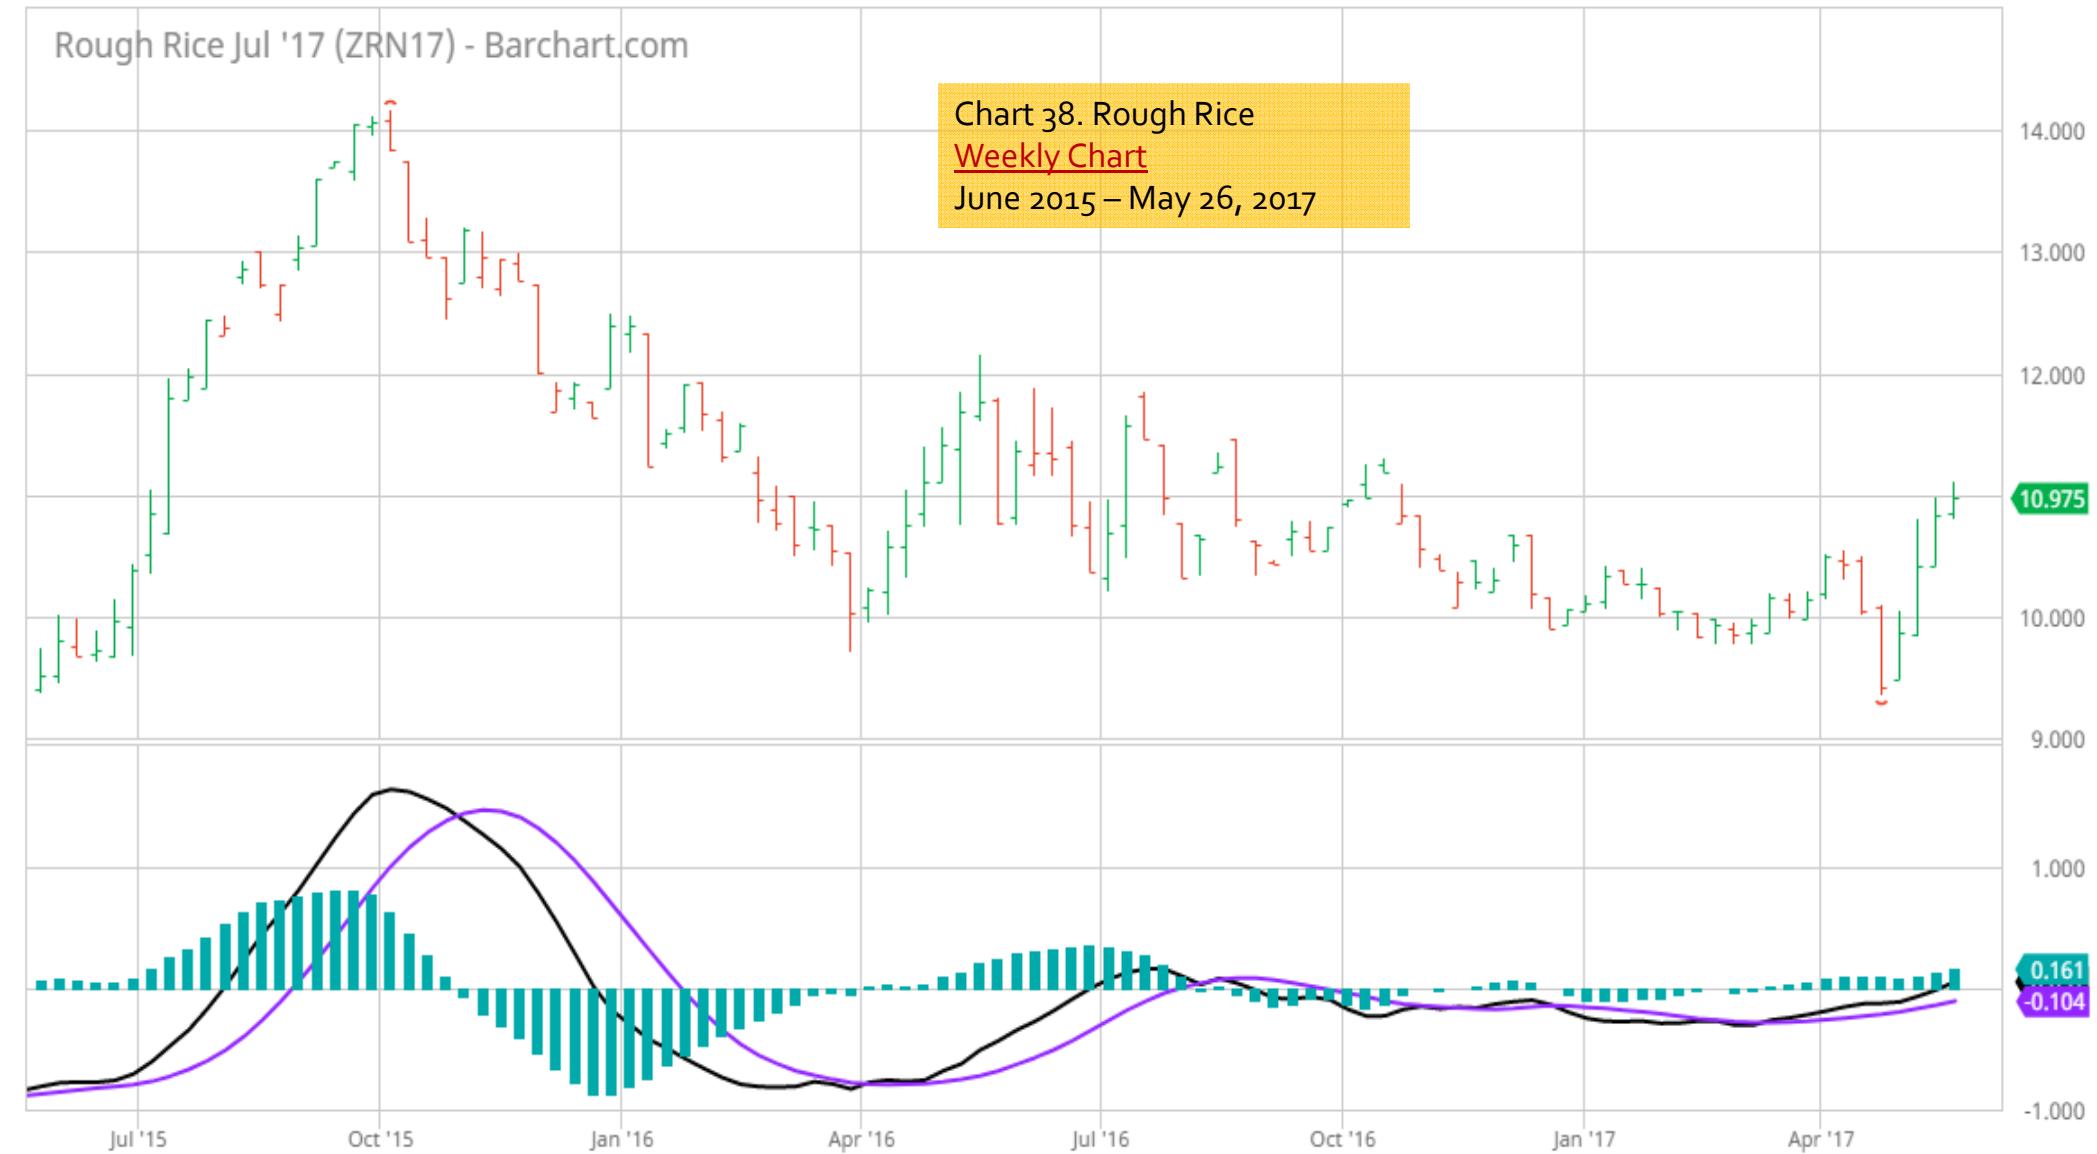

Near Term

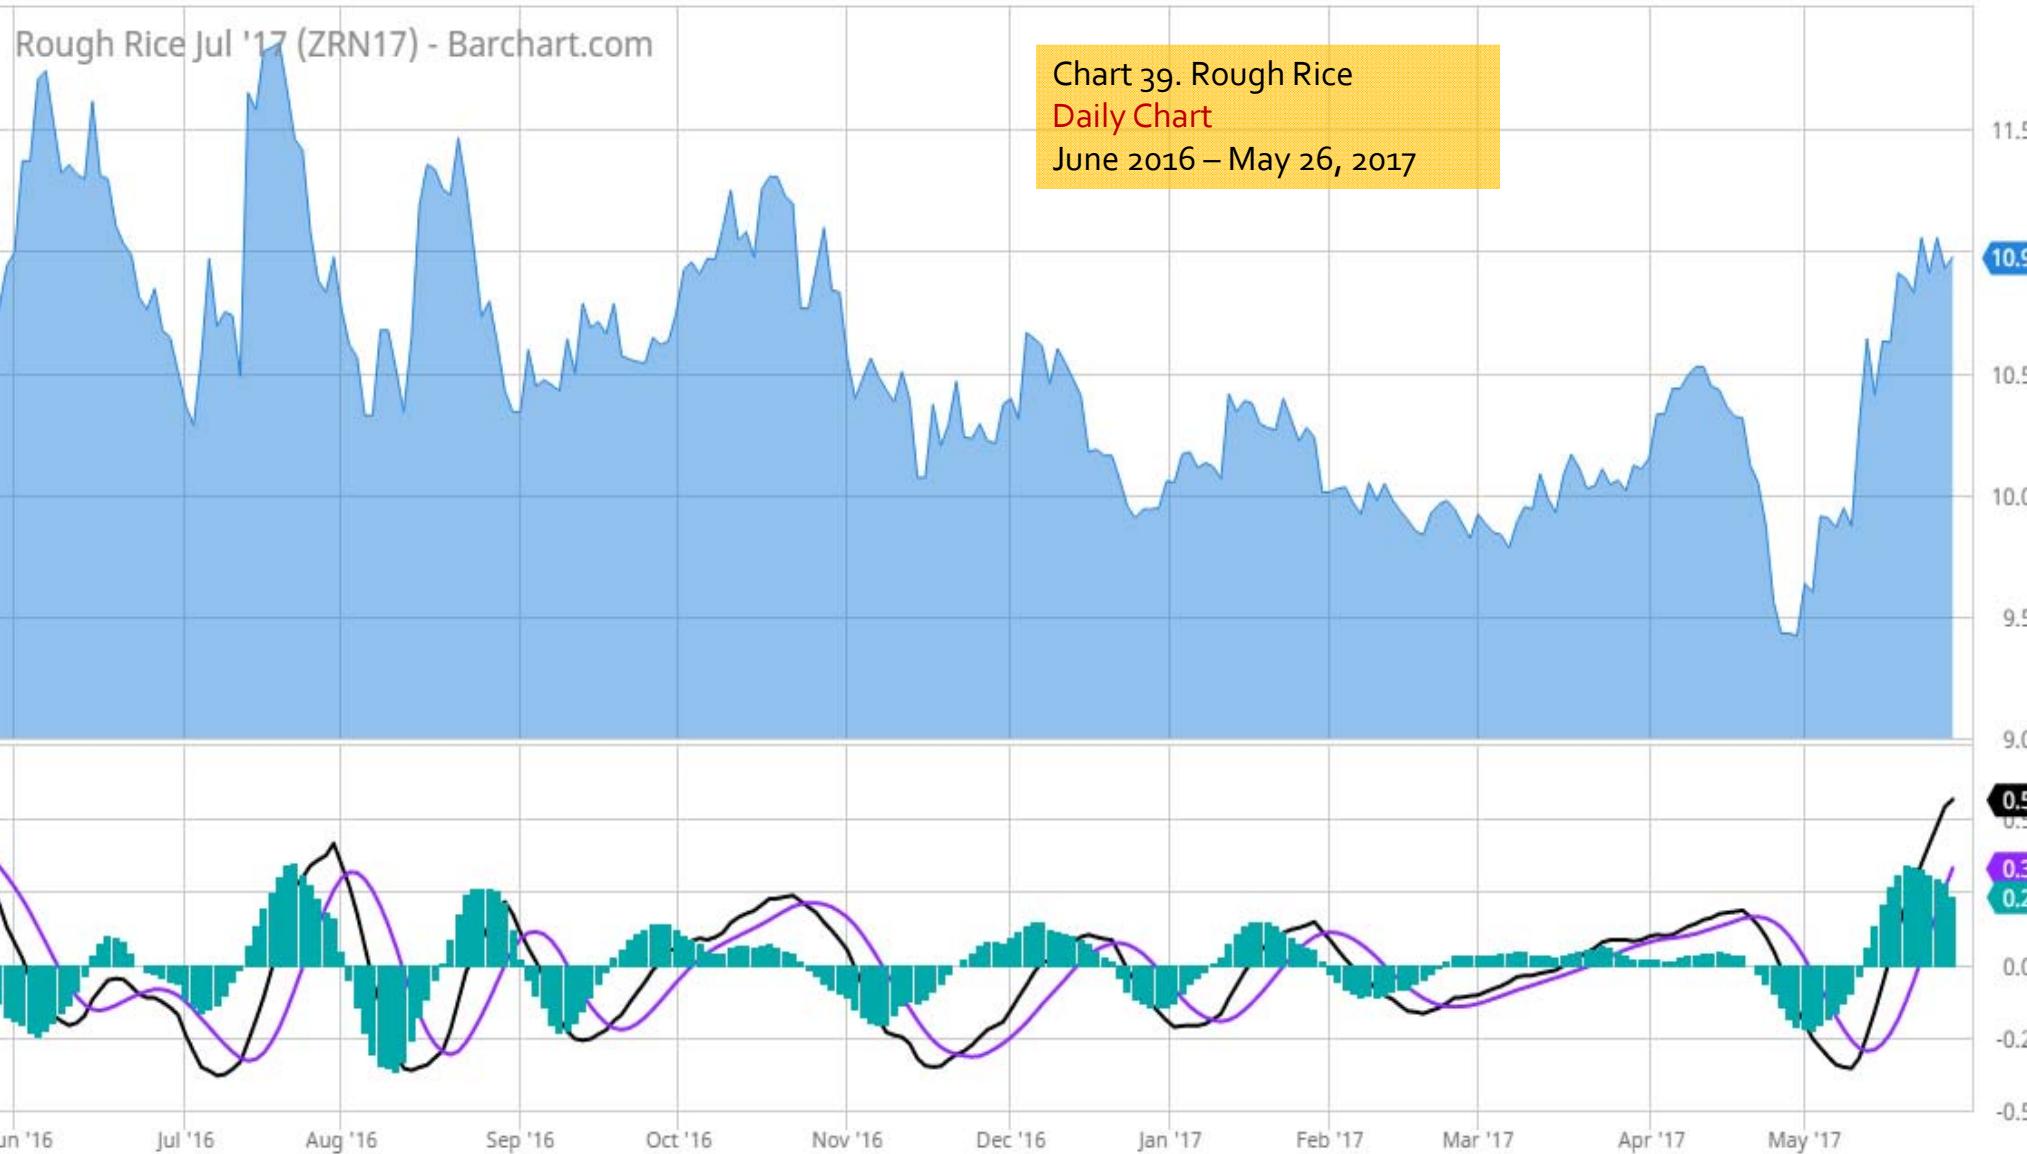

Primary consideration:

- Slight bullish bias remains due to U.S. long grain 2017 acreage and production uncertainty, but slowly losing momentum
- This is a highly complex market with an array of factors impacting price from 2016/2017 fundamentals; 2017 acreage, production and quality uncertainties; present underlying aggregate commodity sector dynamics; problematic global economic momentum, geopolitical uncertainties, and/or global agronomic outlook
